Introduction

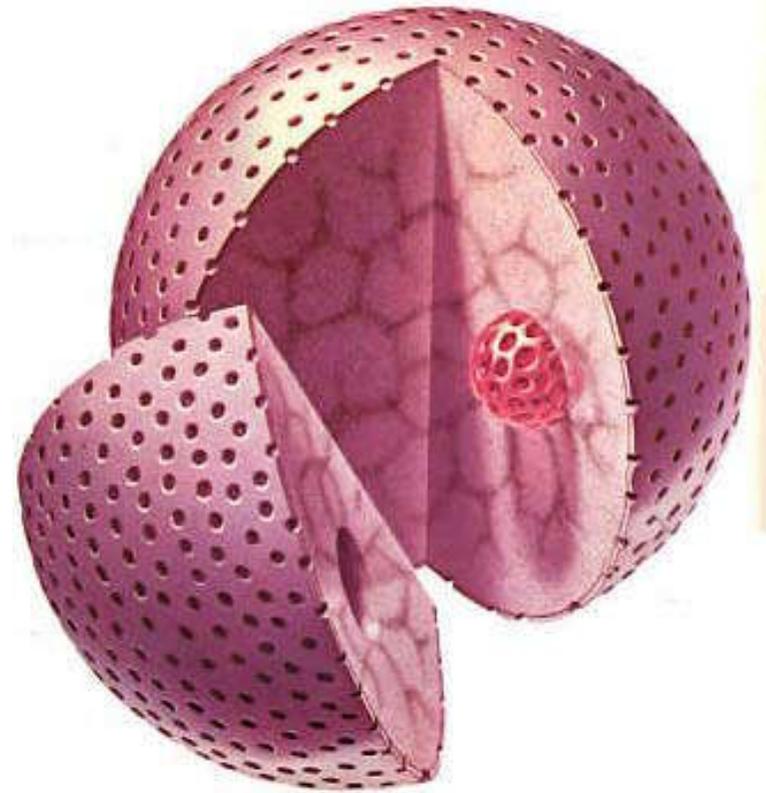

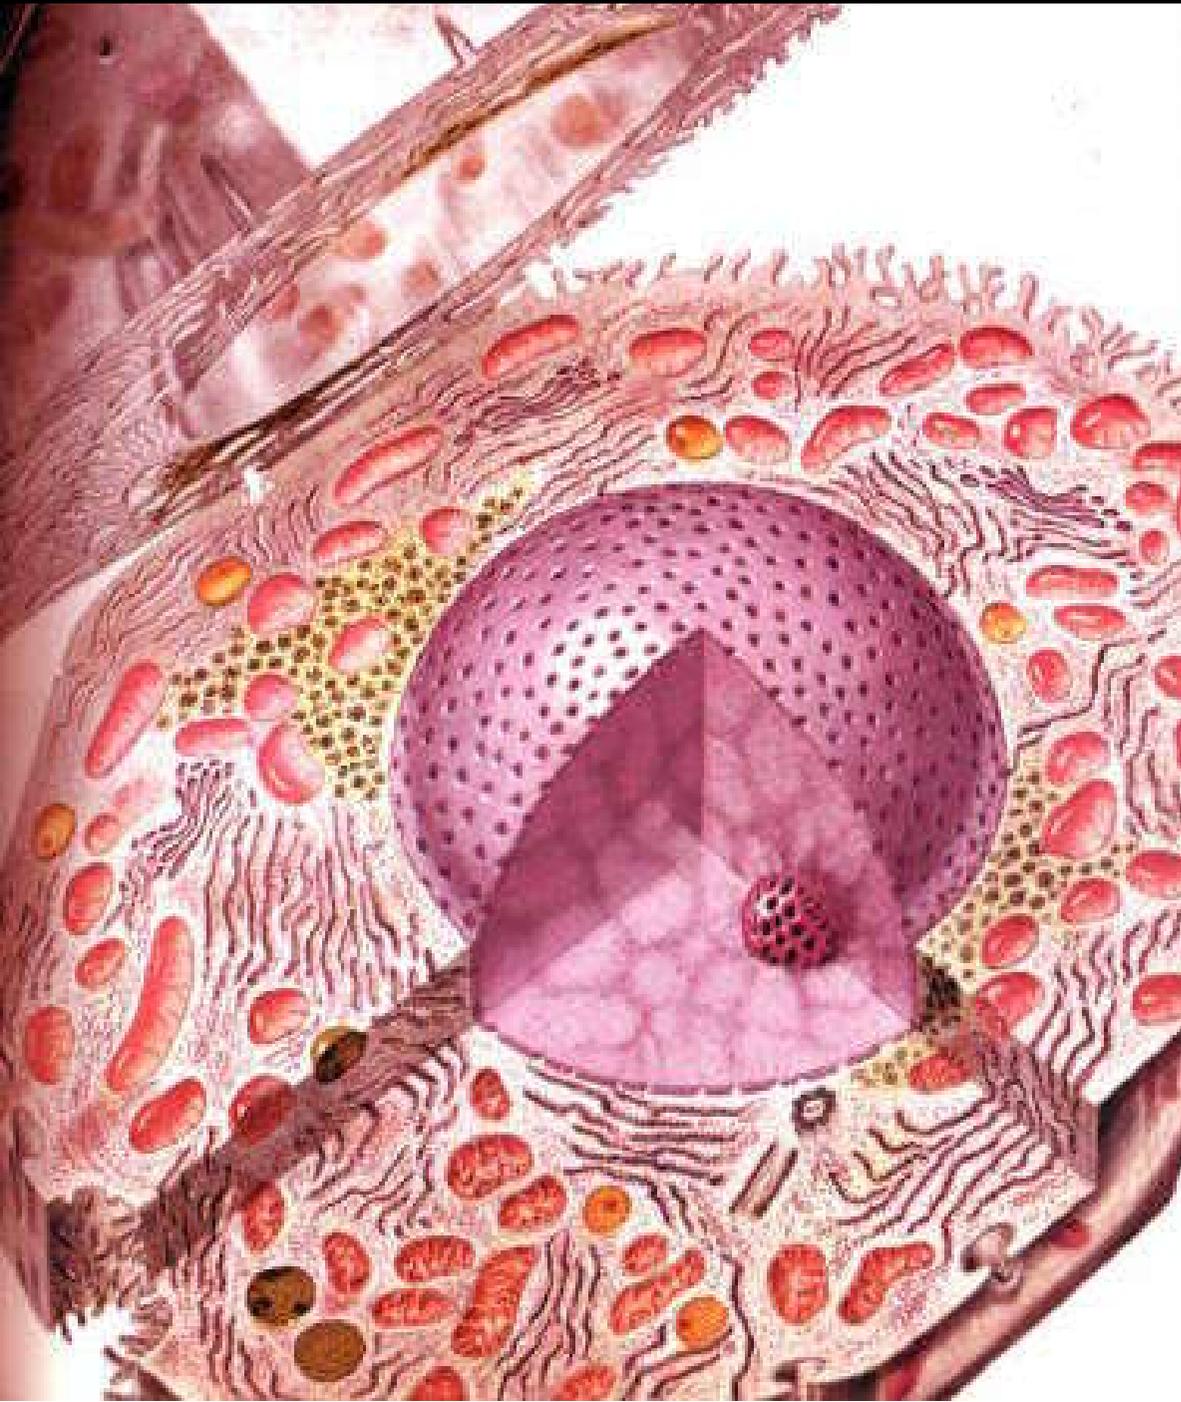

living systems require interdisciplinary tools

The image shows a cluster of several large, rounded, red biological structures against a black background. These structures have a granular, textured surface and are scattered with small, bright green and white spots, which could represent specific proteins, organelles, or markers within the cells. The structures are arranged in a somewhat overlapping, circular pattern.

fluorescent labeling
helps reveal function

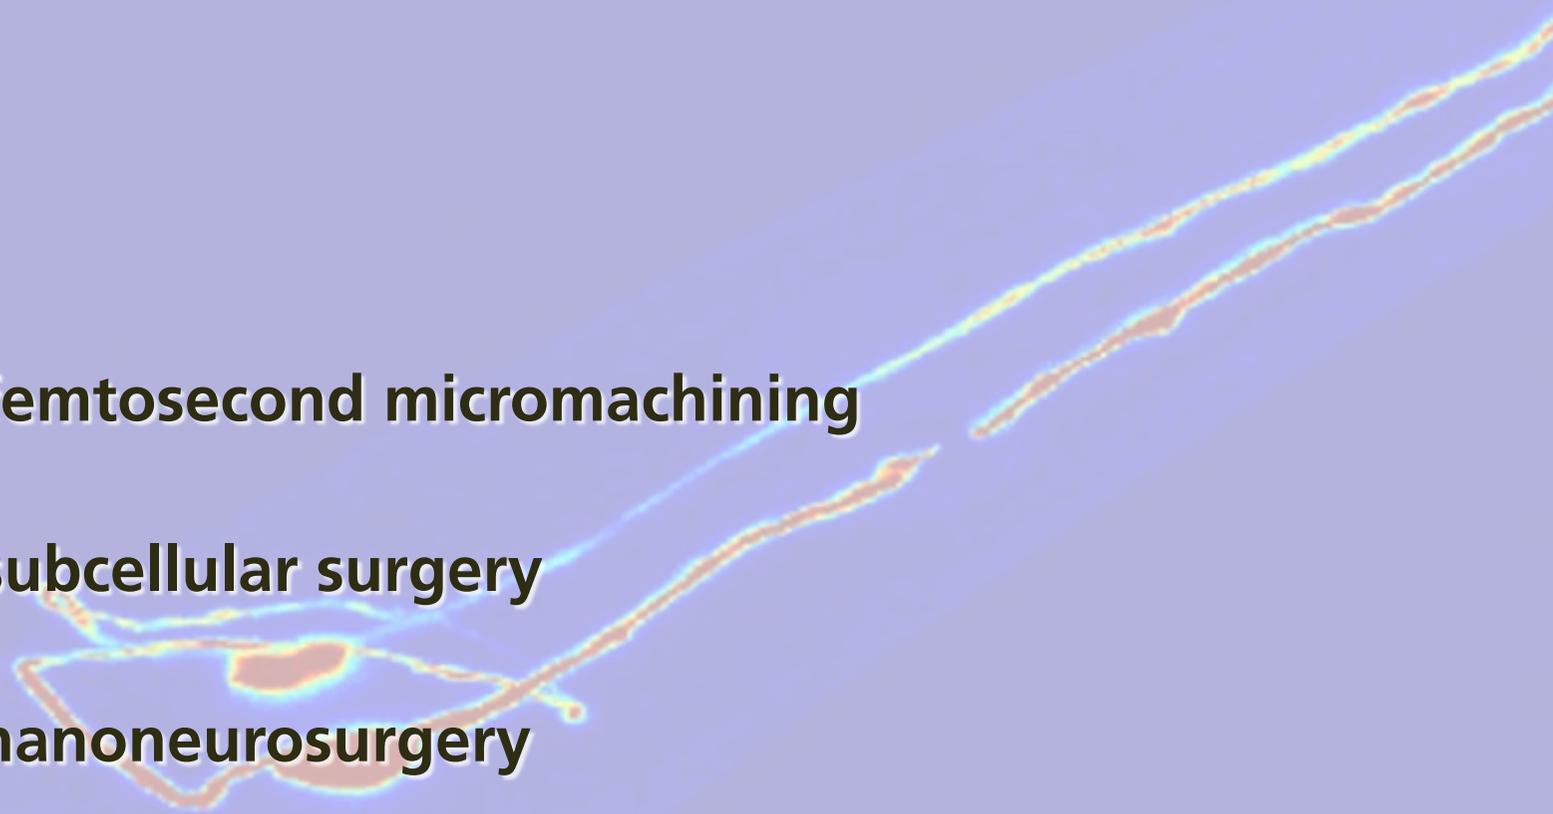

Introduction

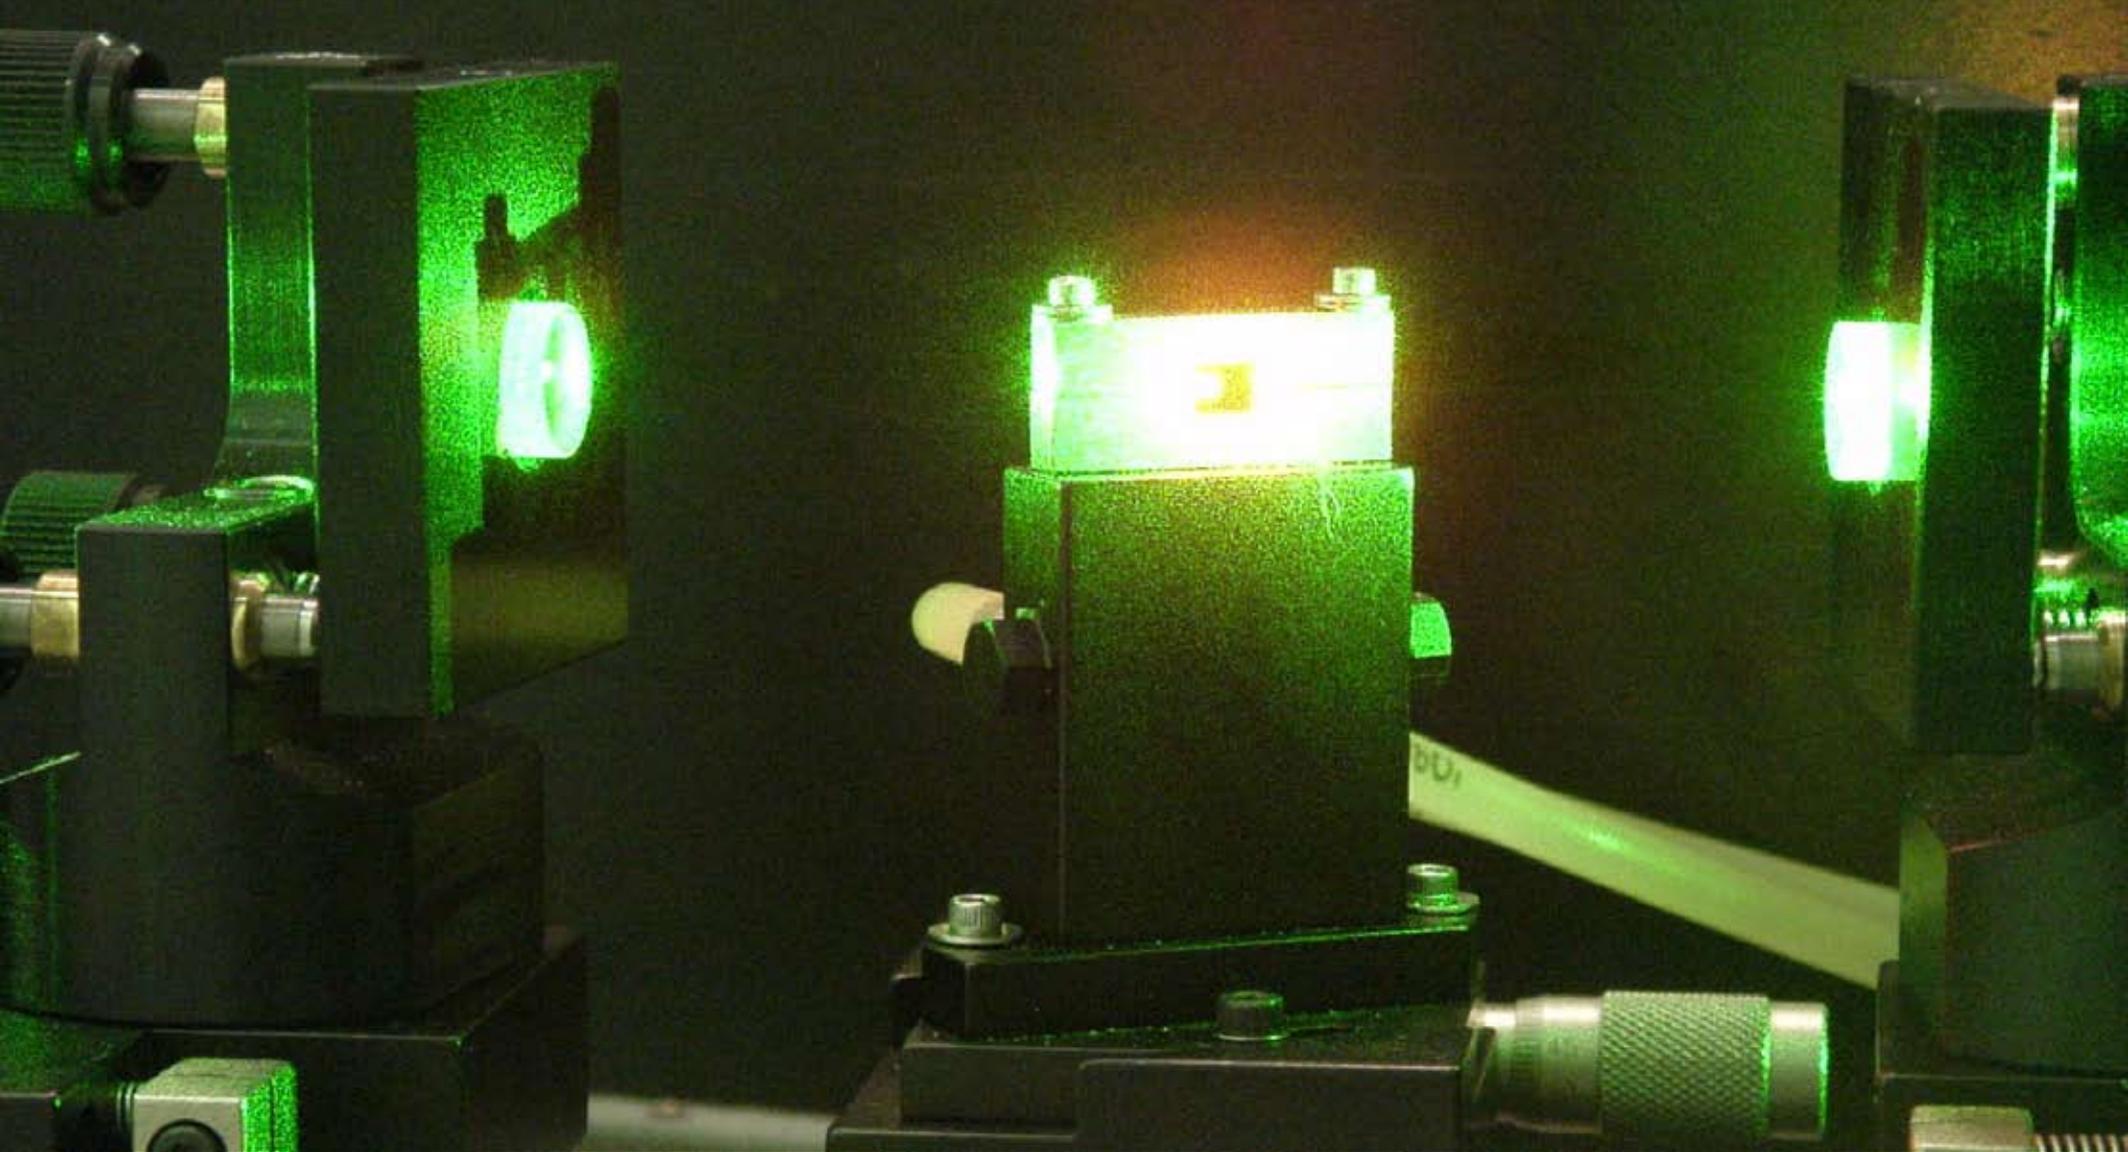

Introduction

- **standard biochemical tools: species selective**
- **fs 'nanosurgery': site-specific**

Outline

- femtosecond micromachining
 - subcellular surgery
 - nanoneurosurgery
- 

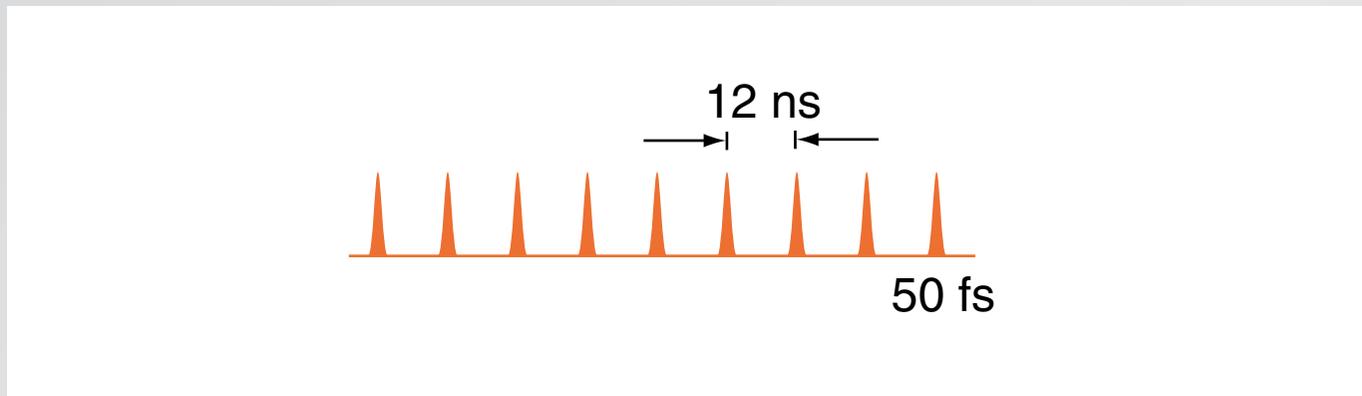

Femtosecond micromachining

Ti: sapphire laser

Femtosecond micromachining

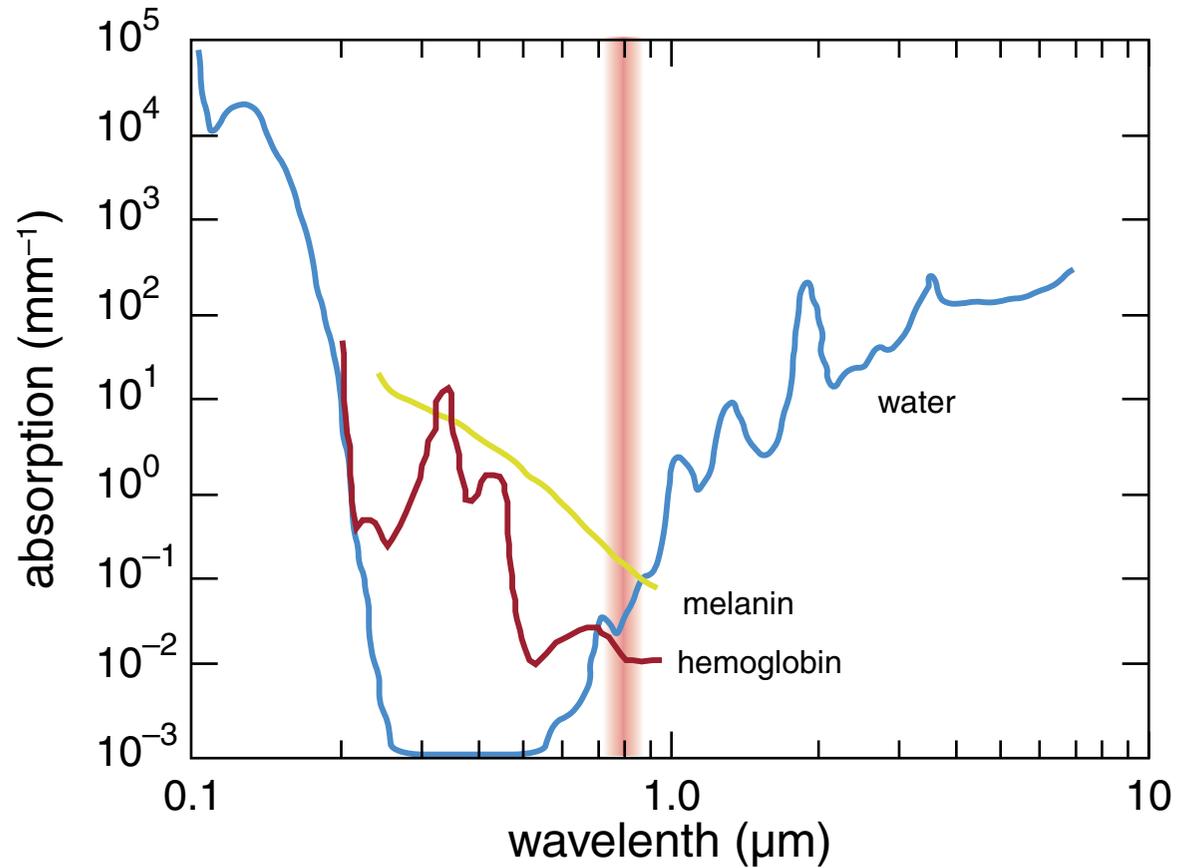

Ti:sapphire lasers

pulse duration:	50 fs	repetition rate:	80 MHz
average power:	1 W	peak power:	10^{10} W
energy per pulse:	1 mJ	wavelength:	800 nm

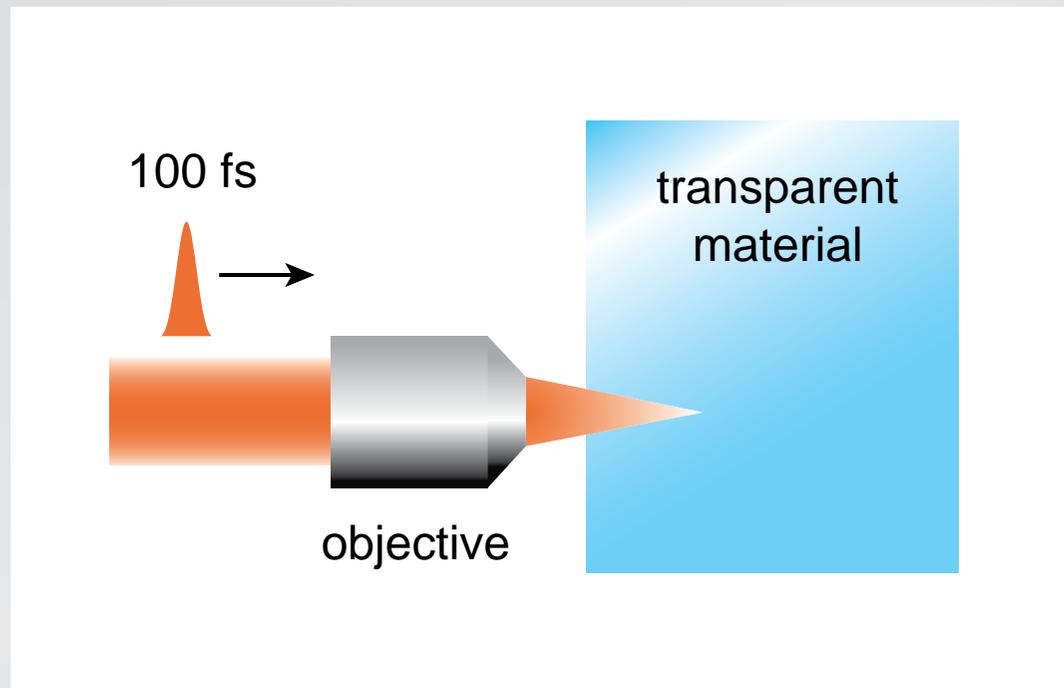

Femtosecond micromachining

tissue is nearly transparent at 800 nm

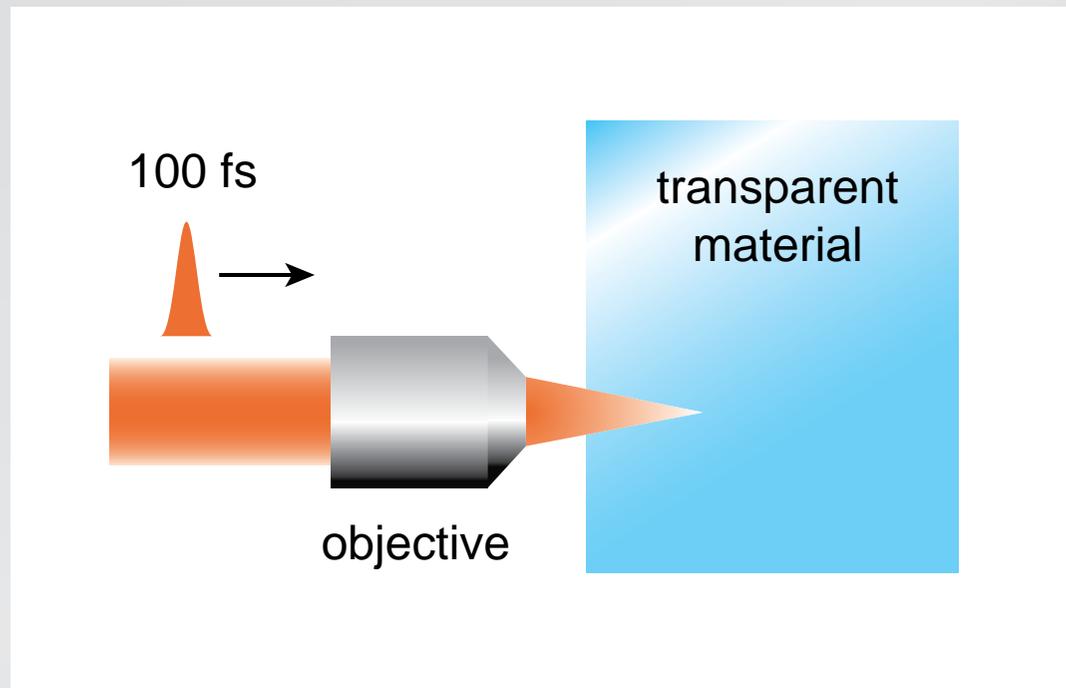

Femtosecond micromachining

focus laser beam inside material

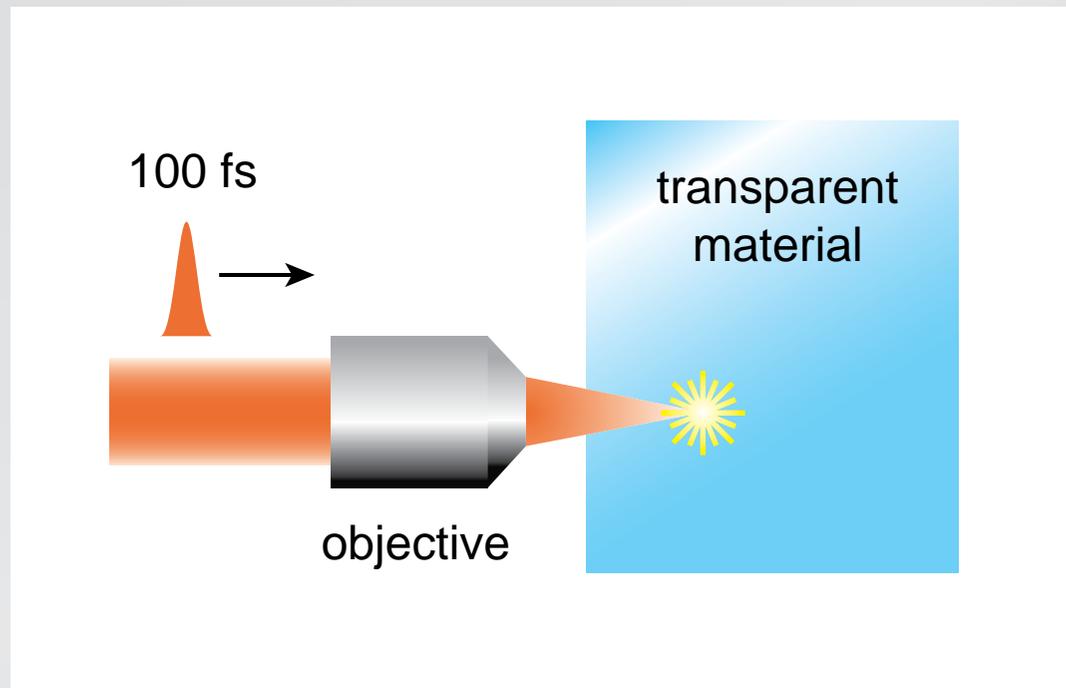

Femtosecond micromachining

high intensity at focus...

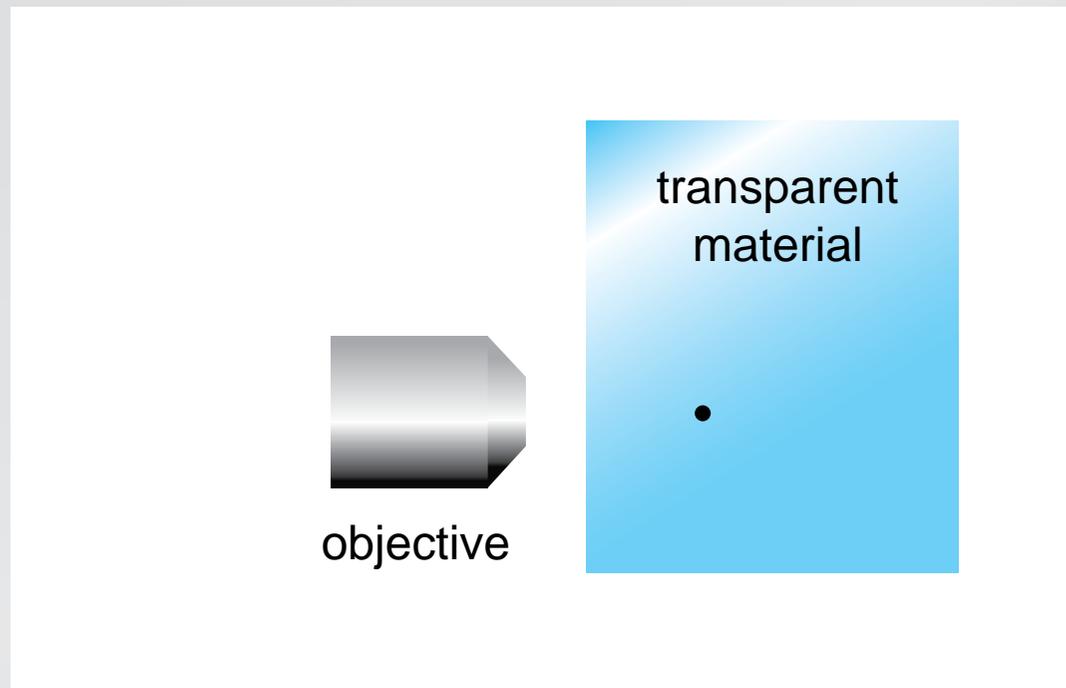

Femtosecond micromachining

...causes nonlinear ionization...

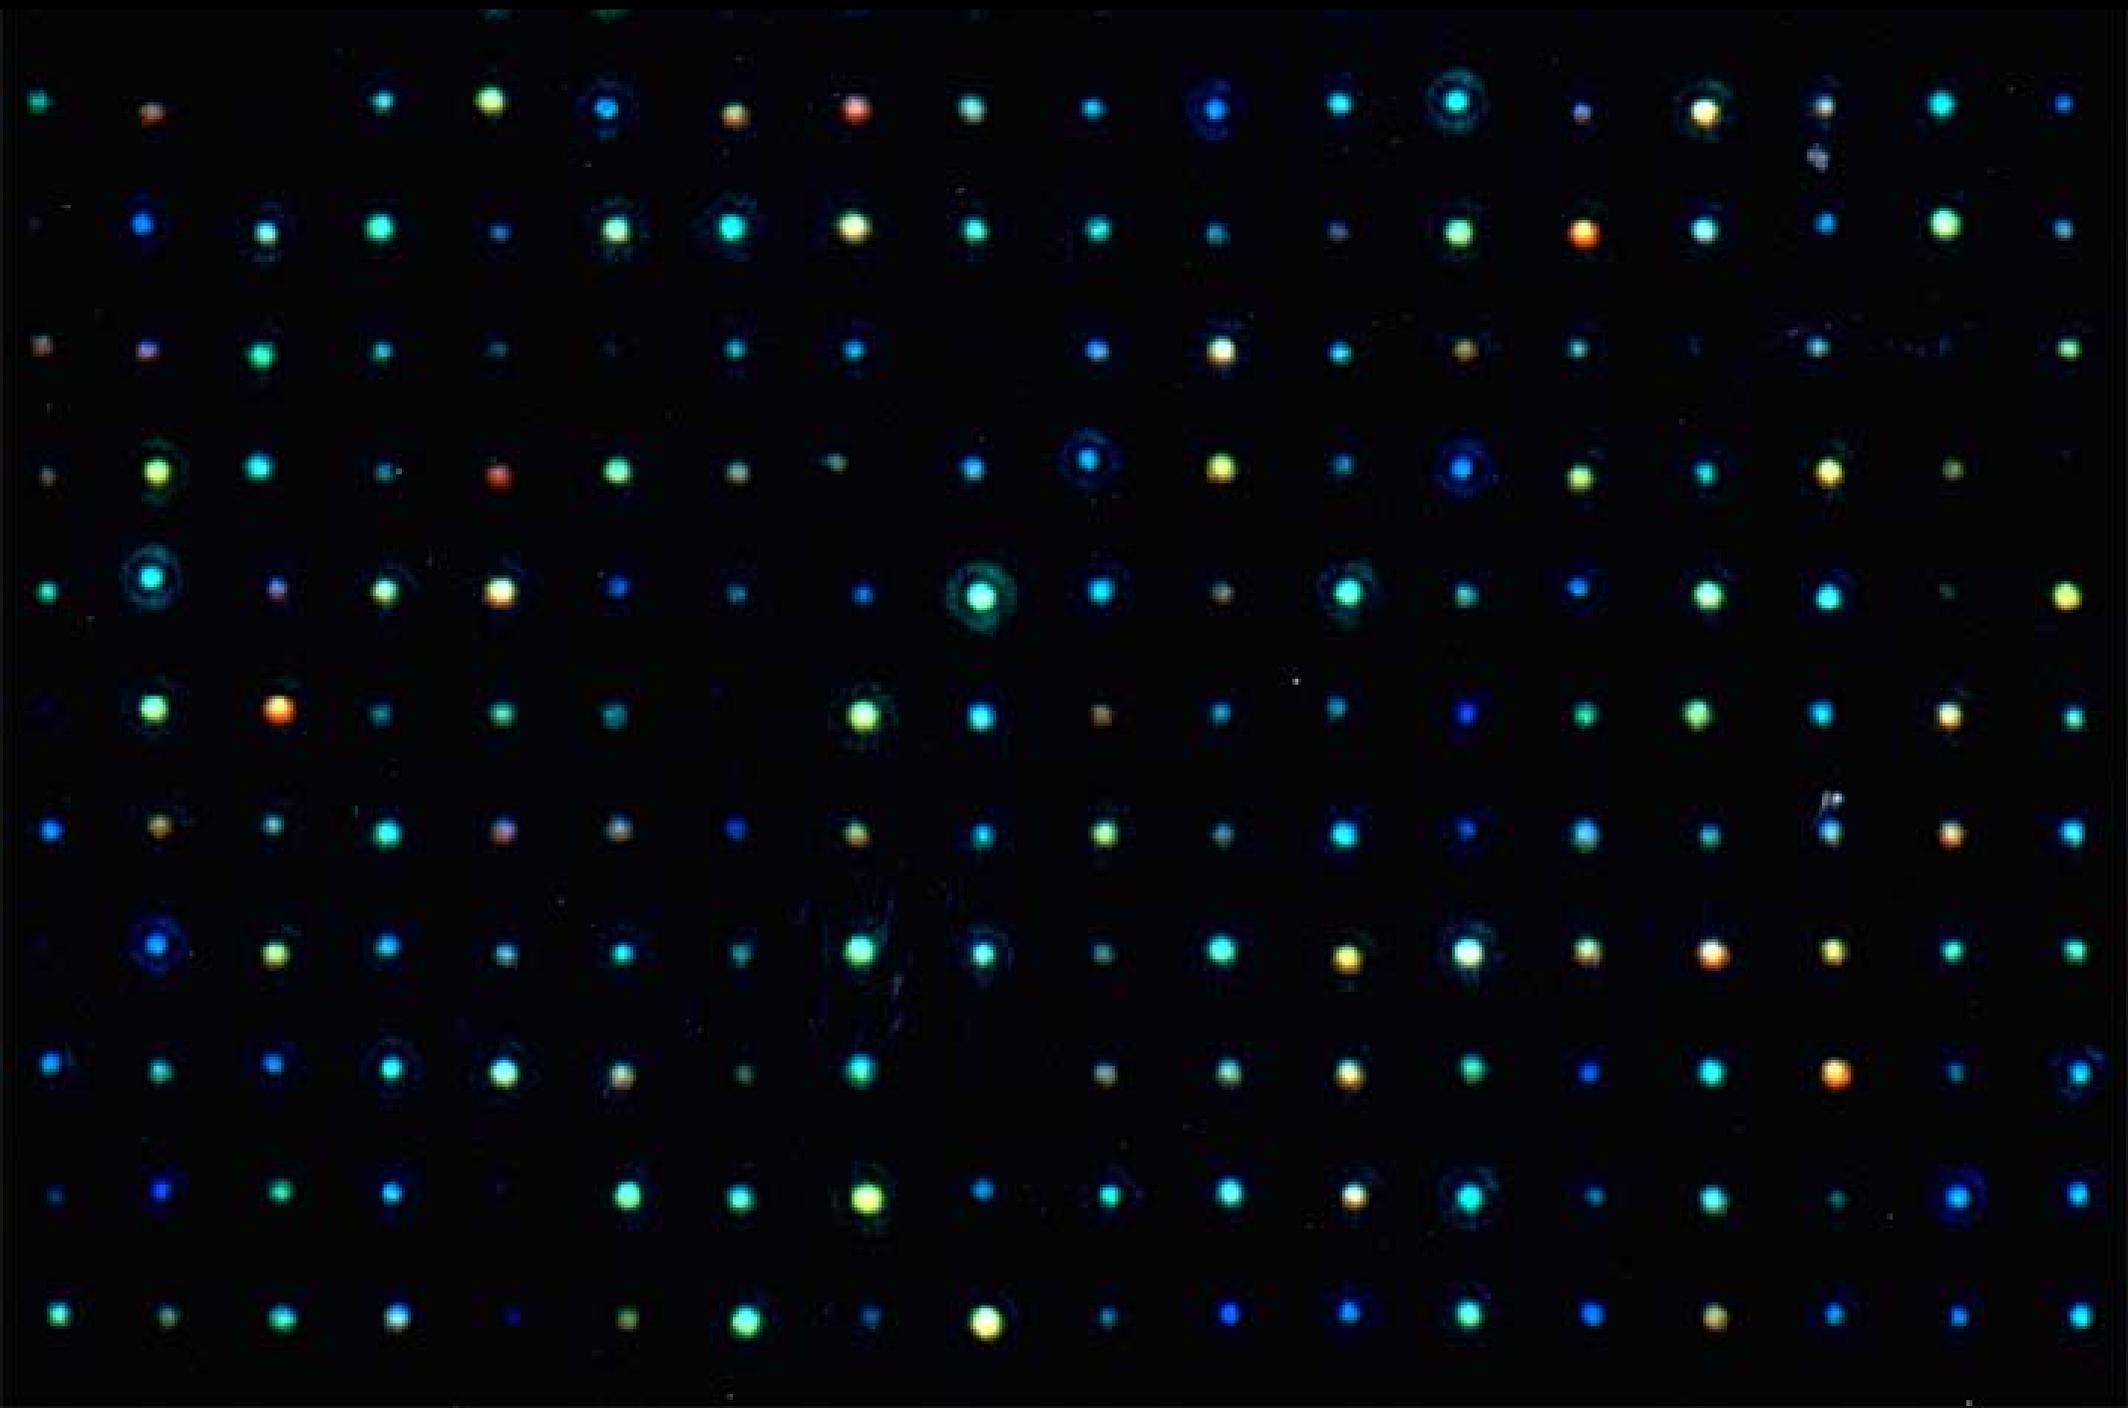

Femtosecond micromachining

and 'microexplosion' causes microscopic damage...

Femtosecond micromachining

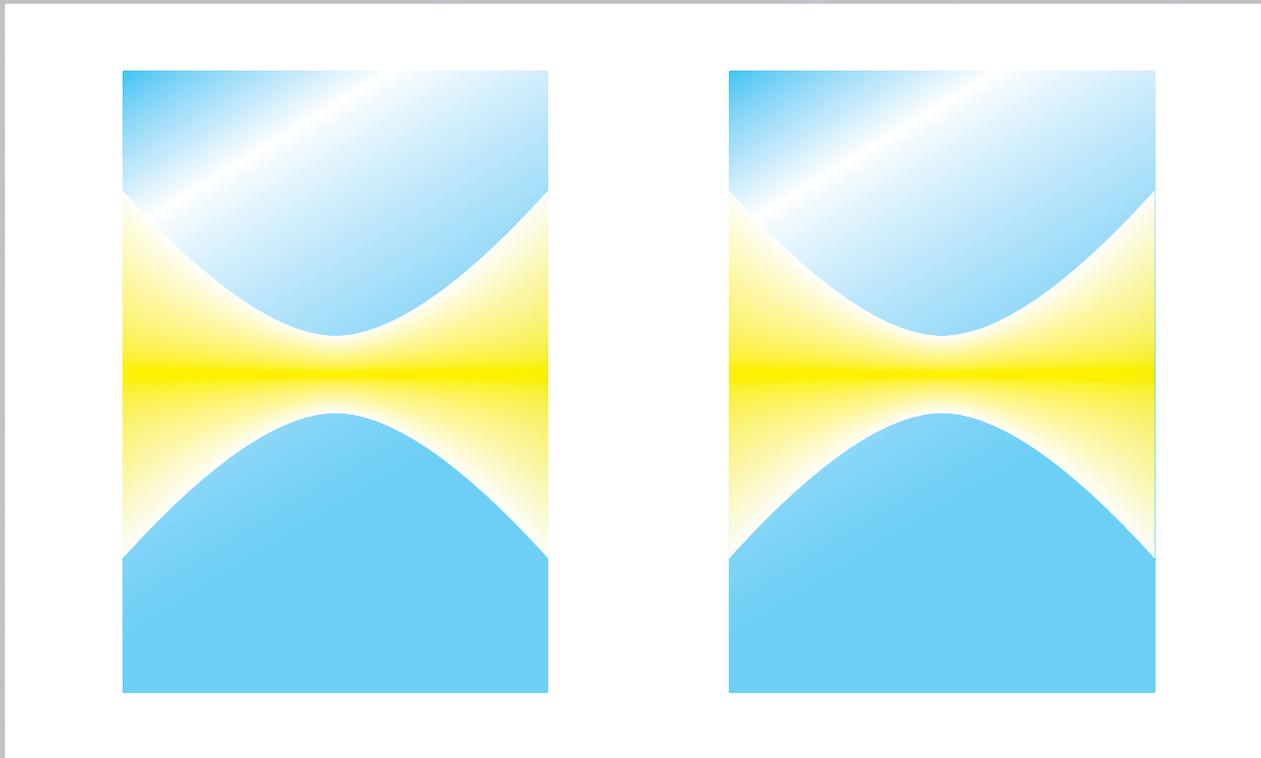

Femtosecond micromachining

photon energy $<$ bandgap \longrightarrow nonlinear interaction

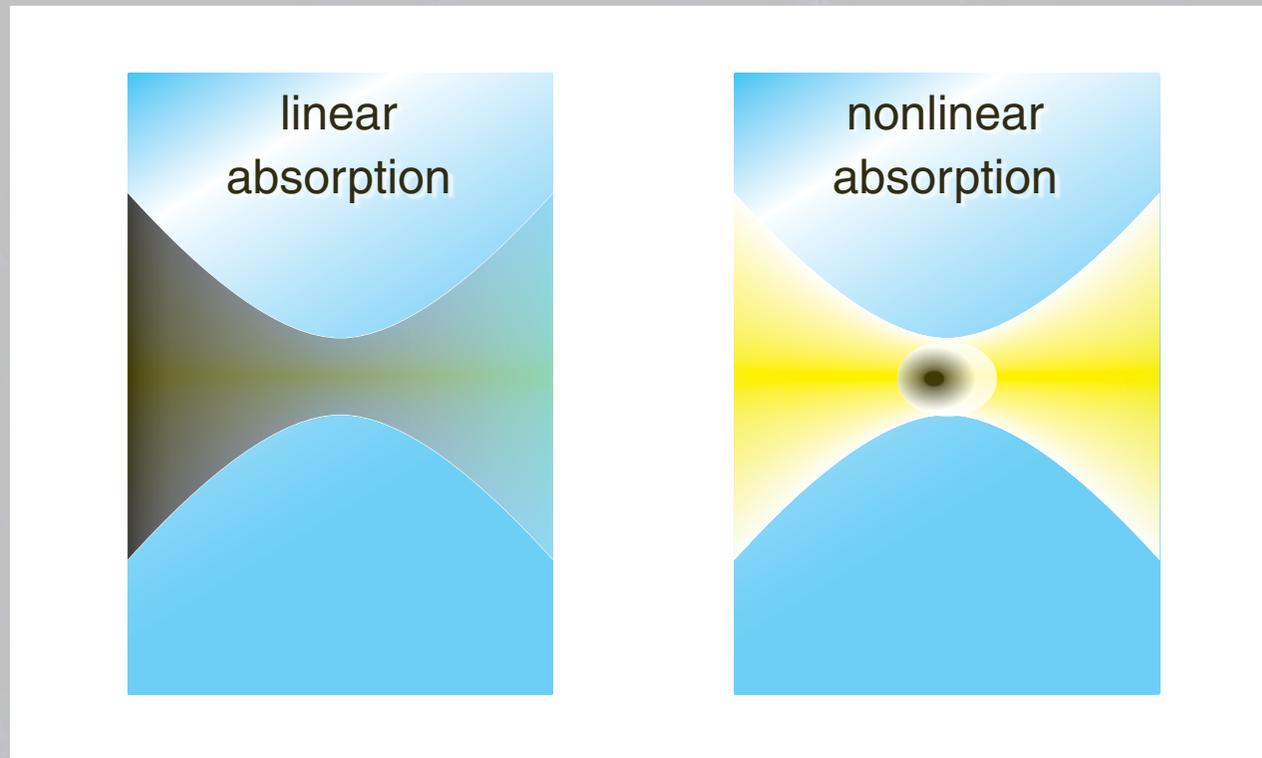

Femtosecond micromachining

nonlinear interaction provides bulk confinement

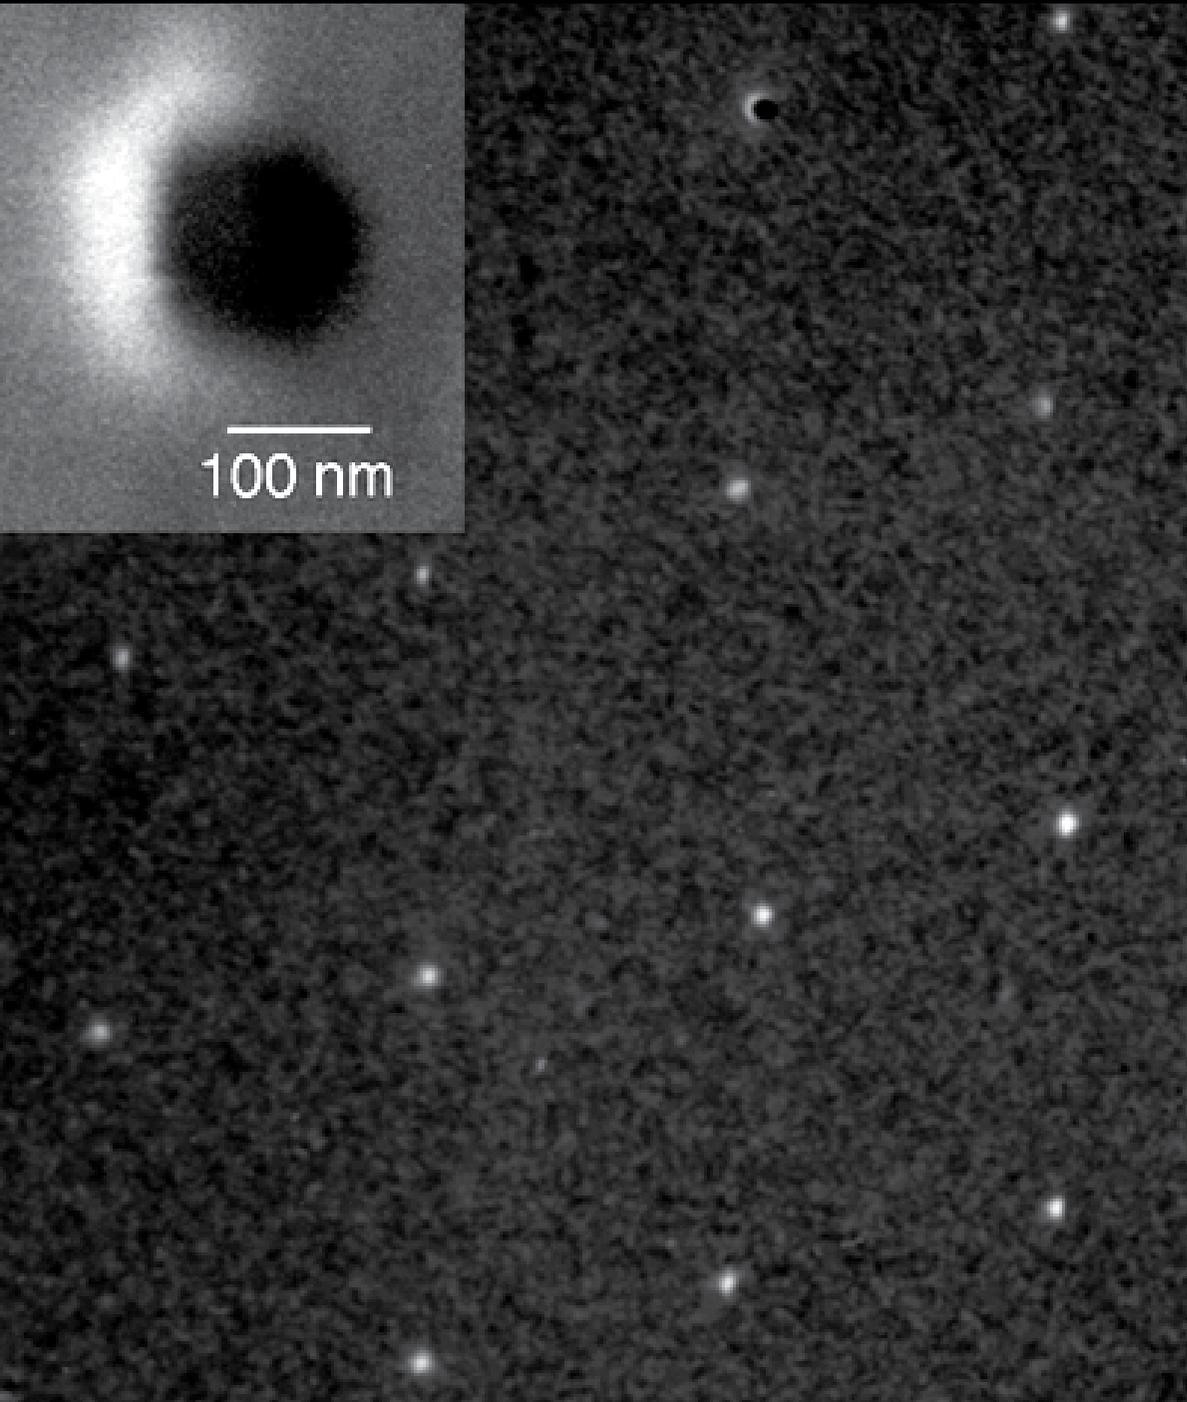

Femtosecond micromachining

nonlinear interaction provides bulk confinement

Femtosecond micromachining

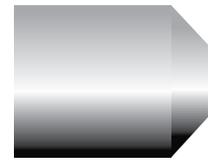

SEM & AFM:

- 100-nm cavities
- little colateral damage

Femtosecond micromachining

Dark-field scattering

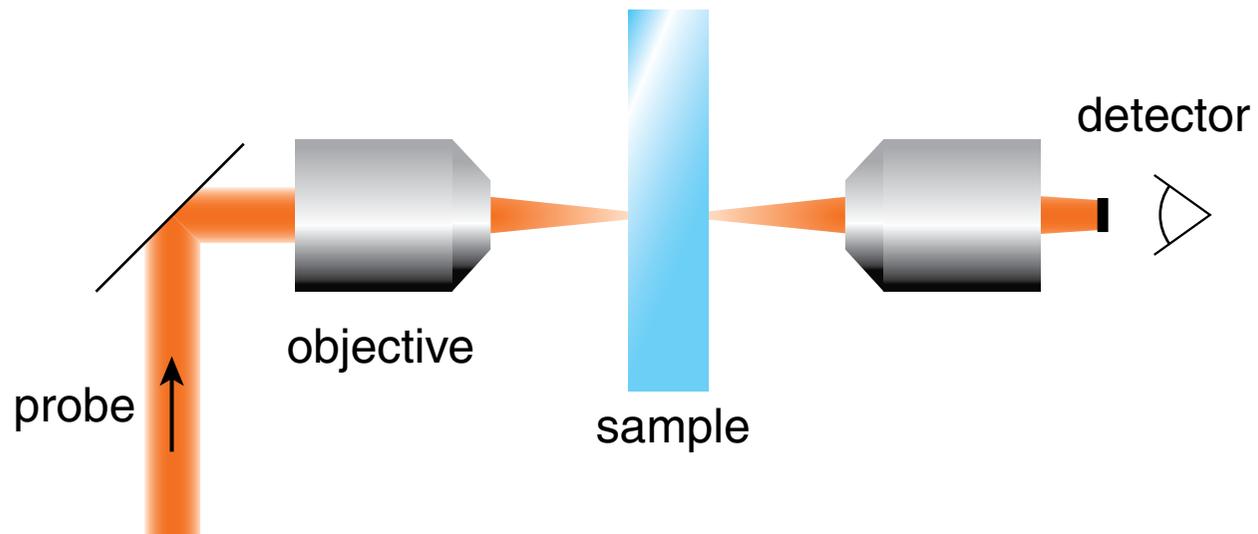

objective

sample

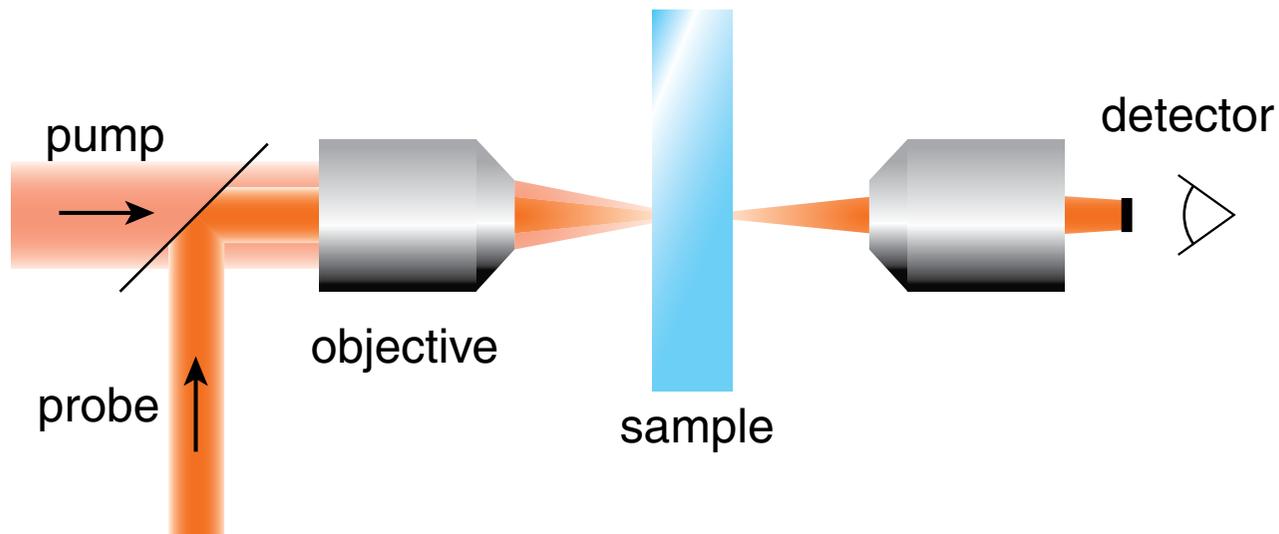

Femtosecond micromachining

block probe beam...

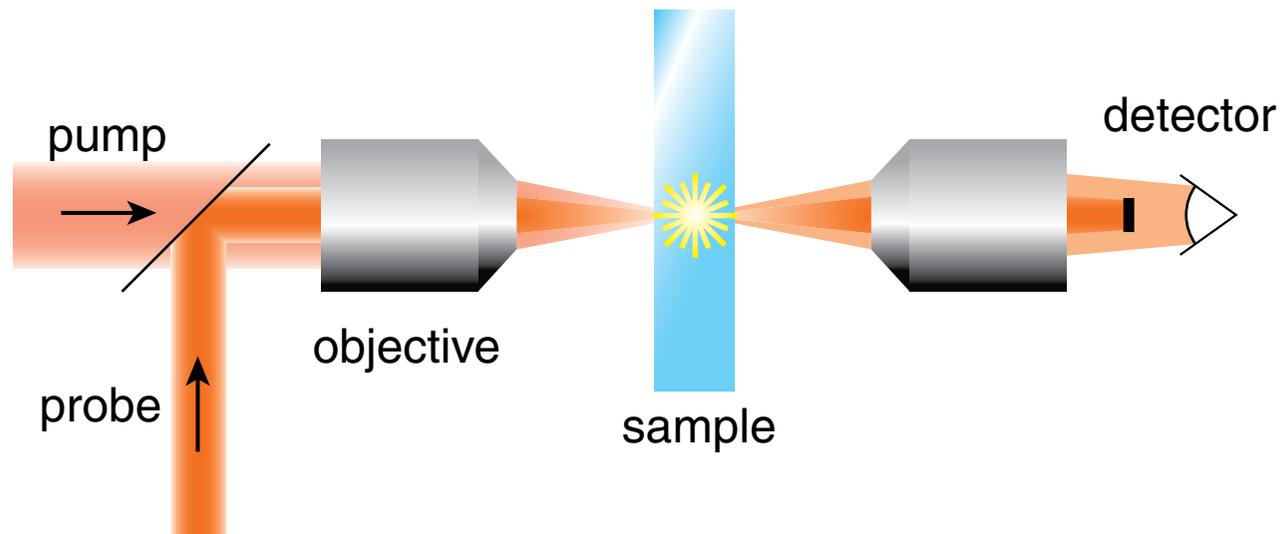

Femtosecond micromachining

... bring in pump beam...

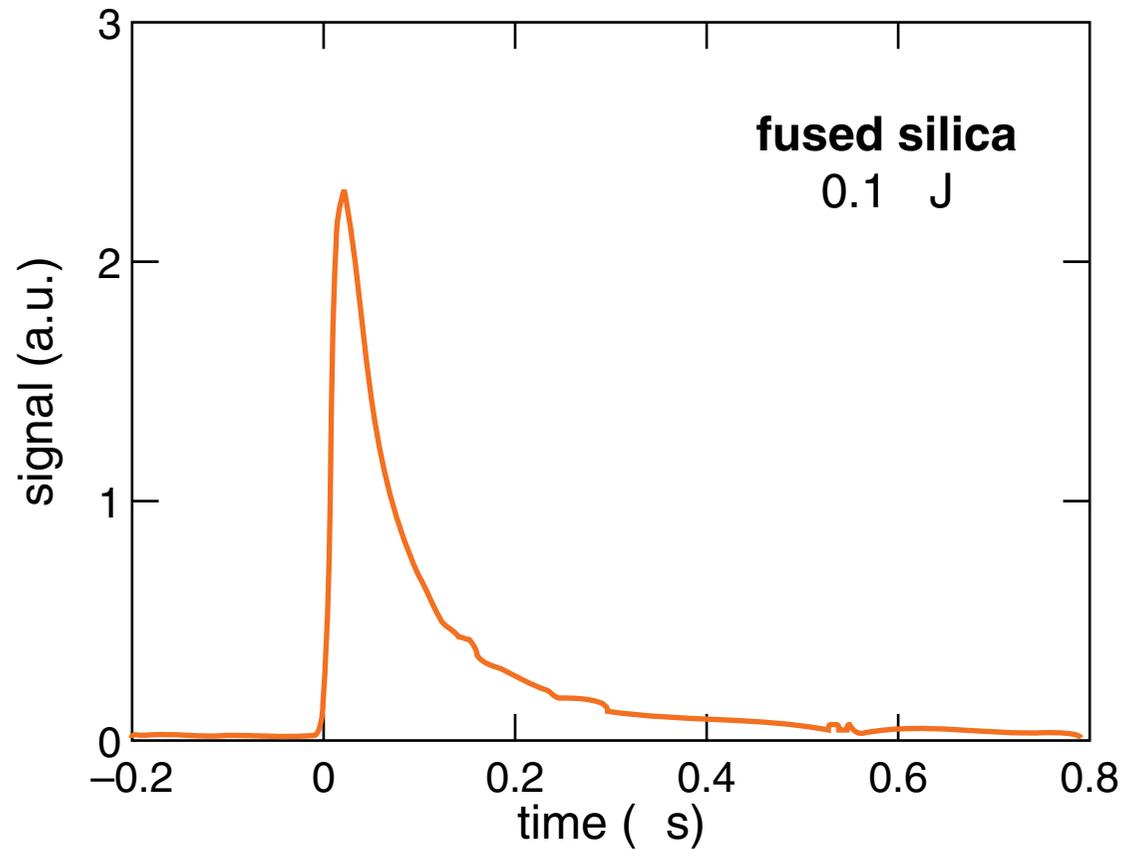

Femtosecond micromachining

... damage scatters probe beam

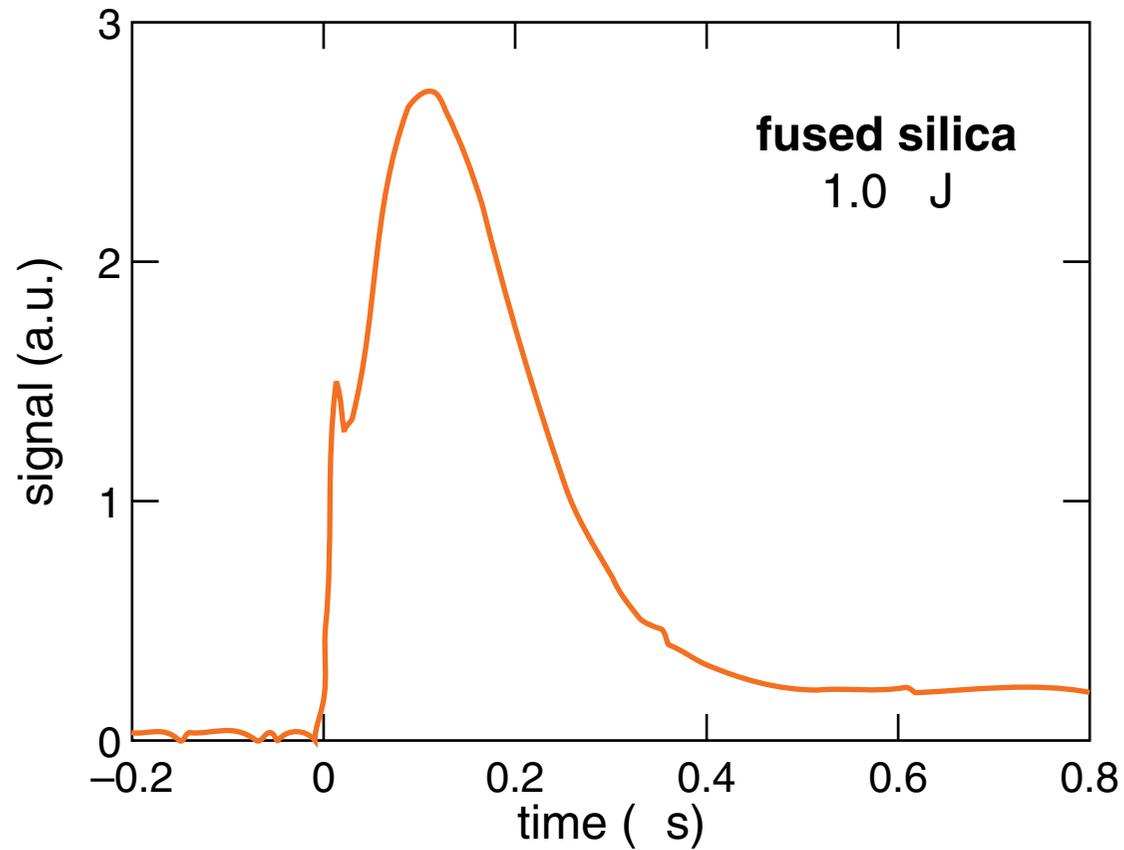

Femtosecond micromachining

scattered signal

scattered signal

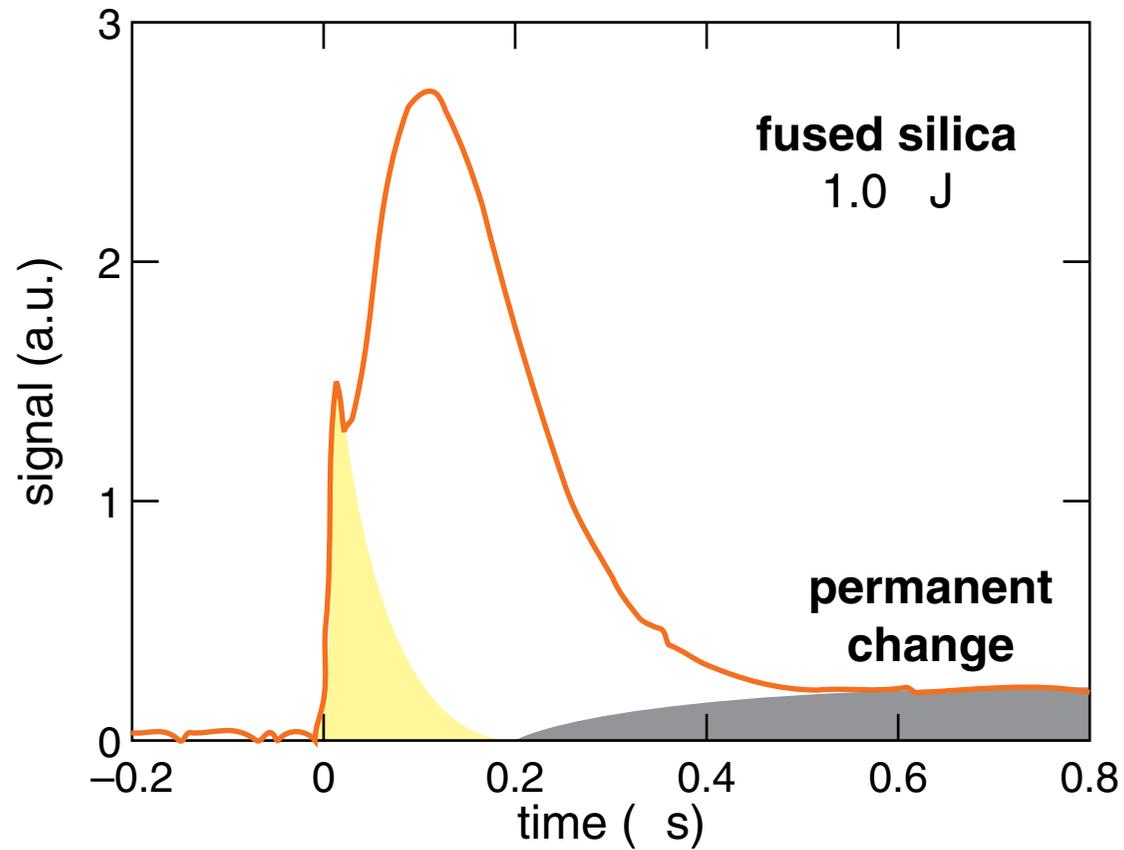

Femtosecond micromachining

scattered signal

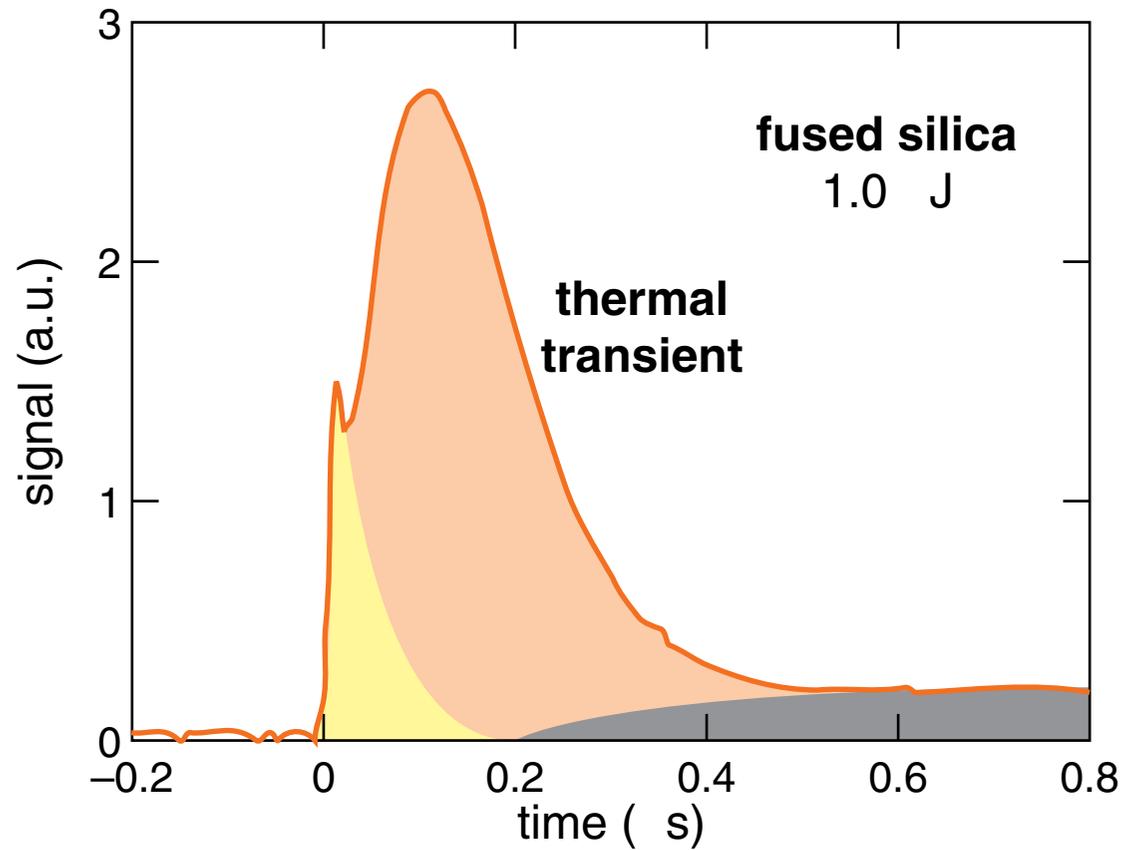

Femtosecond micromachining

vary numerical aperture

Femtosecond micromachining

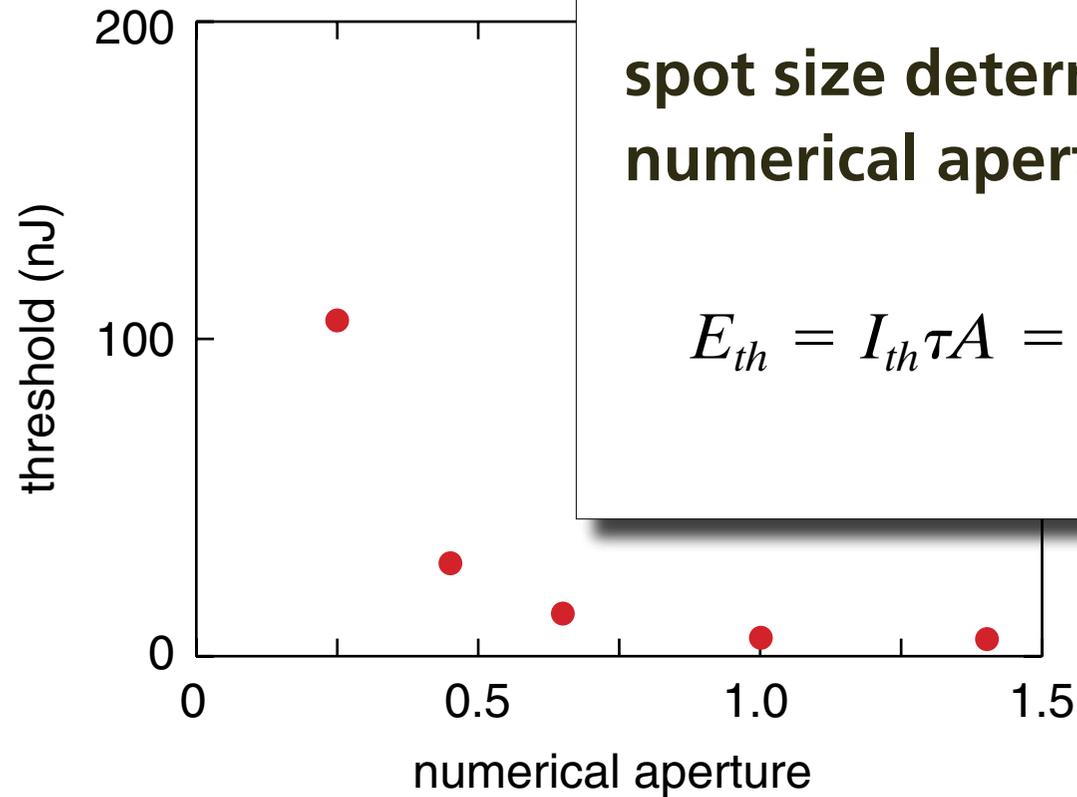

vary numerical

intensity threshold:

$$E_{th} = I_{th} \tau A$$

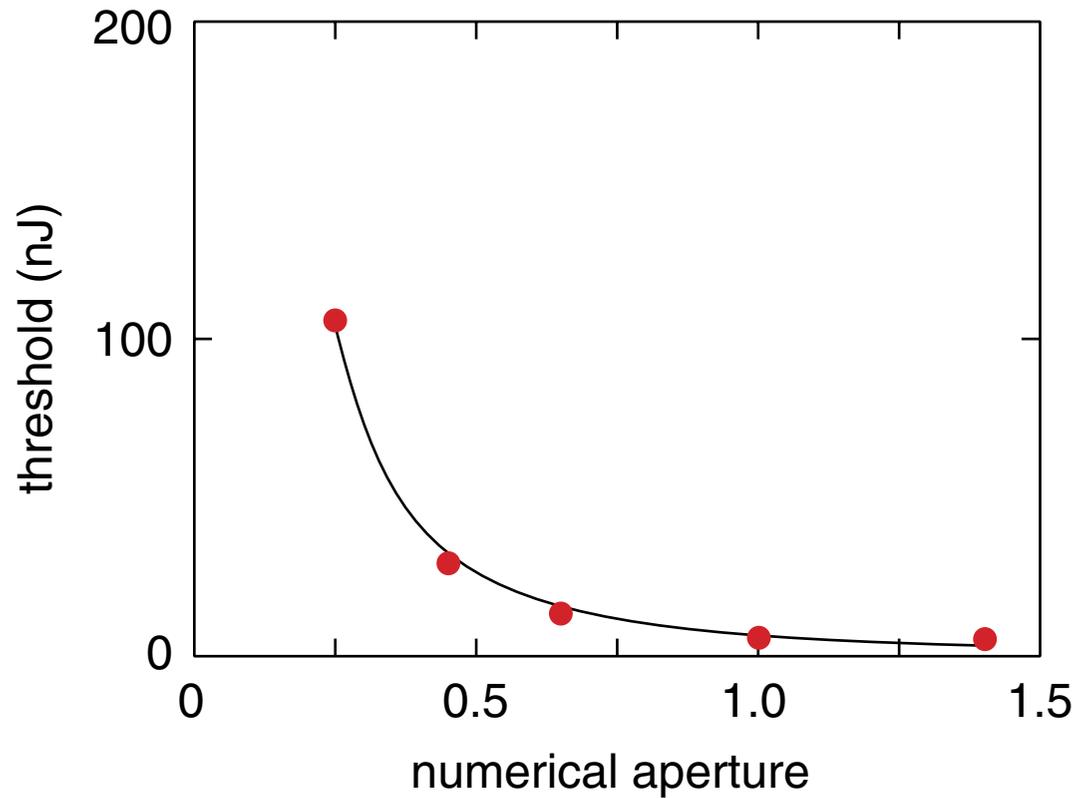

spot size determined by
numerical aperture:

$$E_{th} = I_{th} \tau A = \frac{I_{th} \tau \lambda^2}{\pi (\text{NA})^2}$$

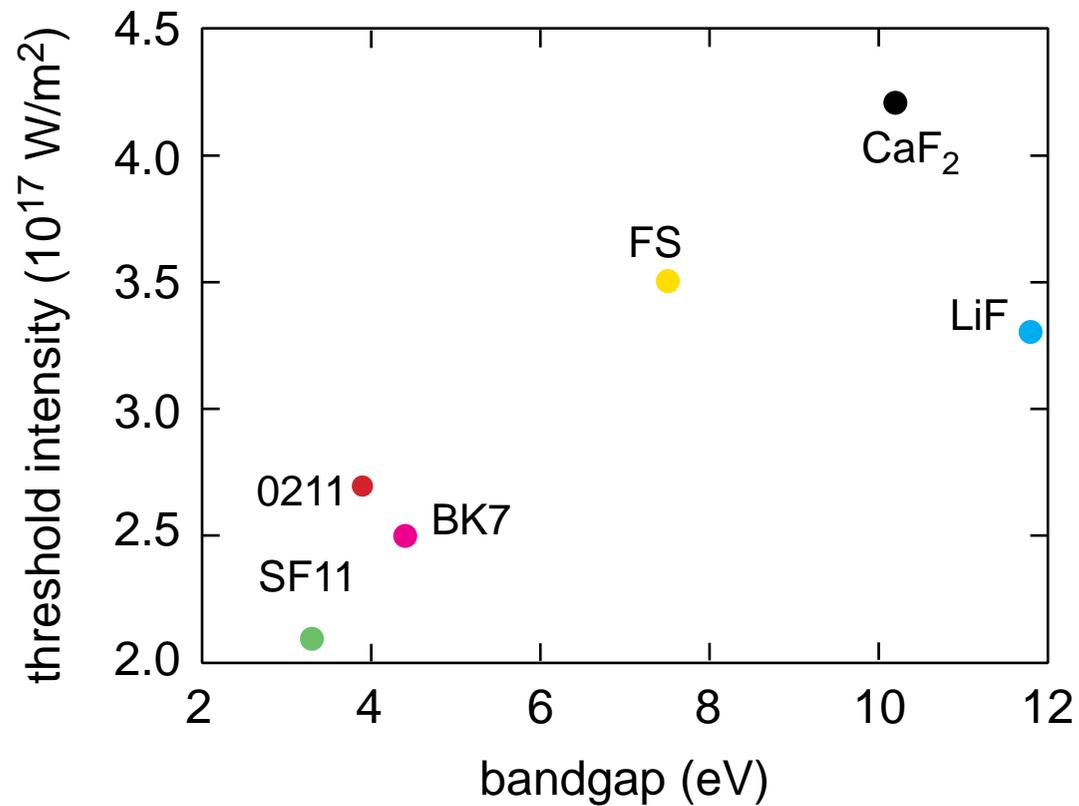

Femtosecond micromachining

fit gives threshold intensity: $I_{th} = 2.5 \times 10^{17} \text{ W/m}^2$

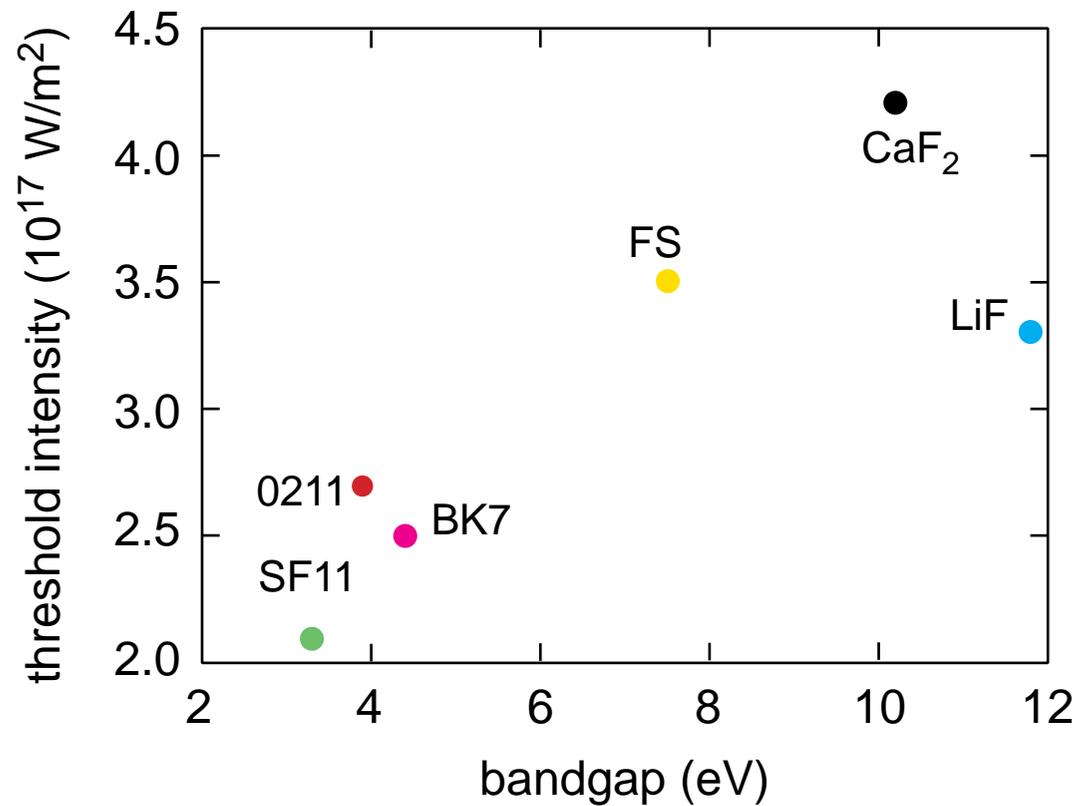

Femtosecond micromachining

vary material...

Femtosecond micromachining

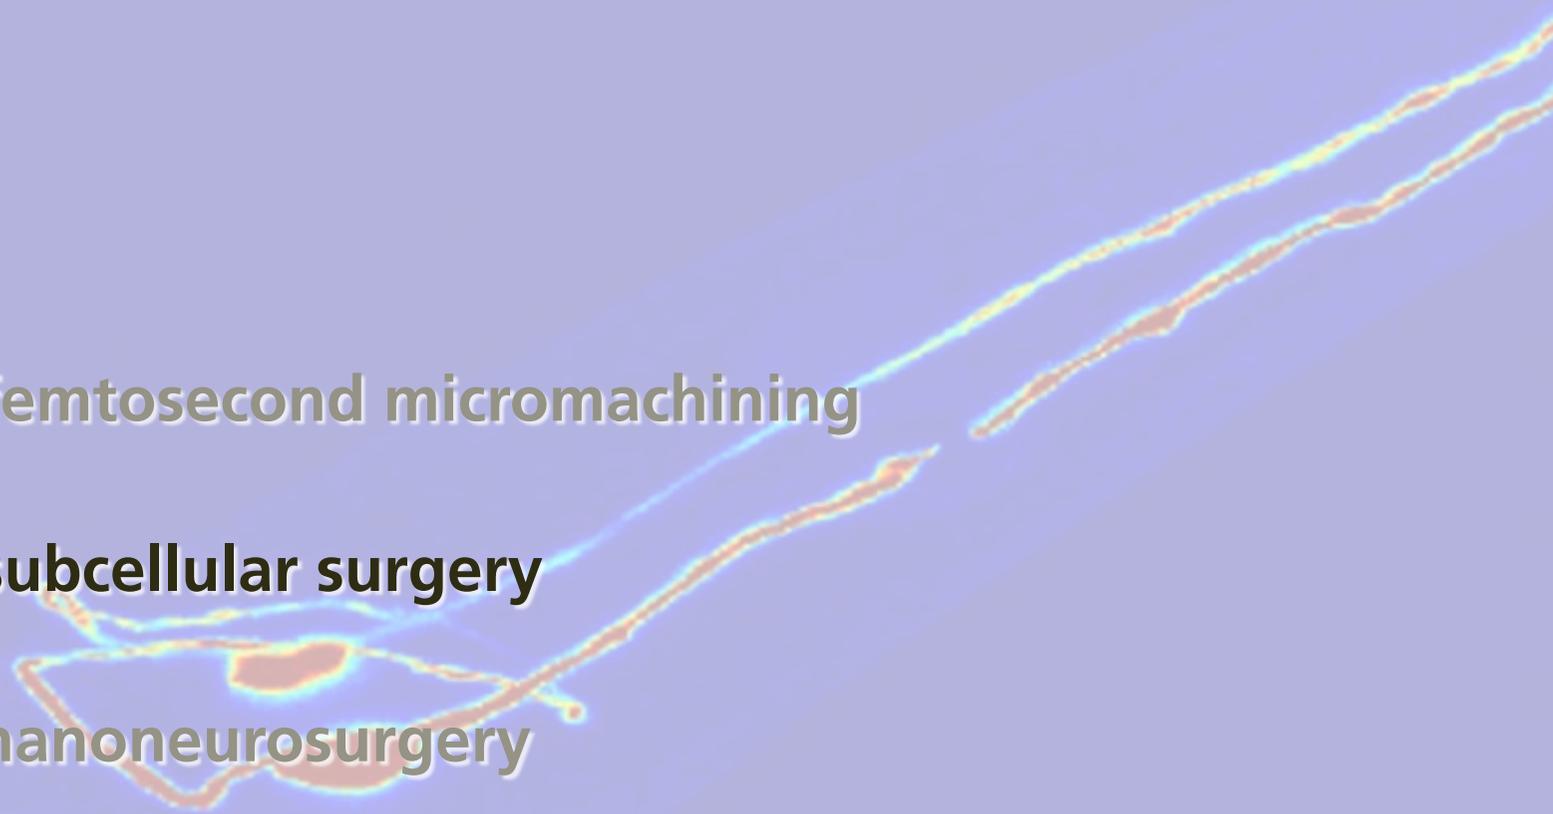

...threshold varies with band gap (but not much!)

Femtosecond micromachining

- **nonlinear interaction**
- **disrupt matter inside bulk**
- **ablation at very low energy**

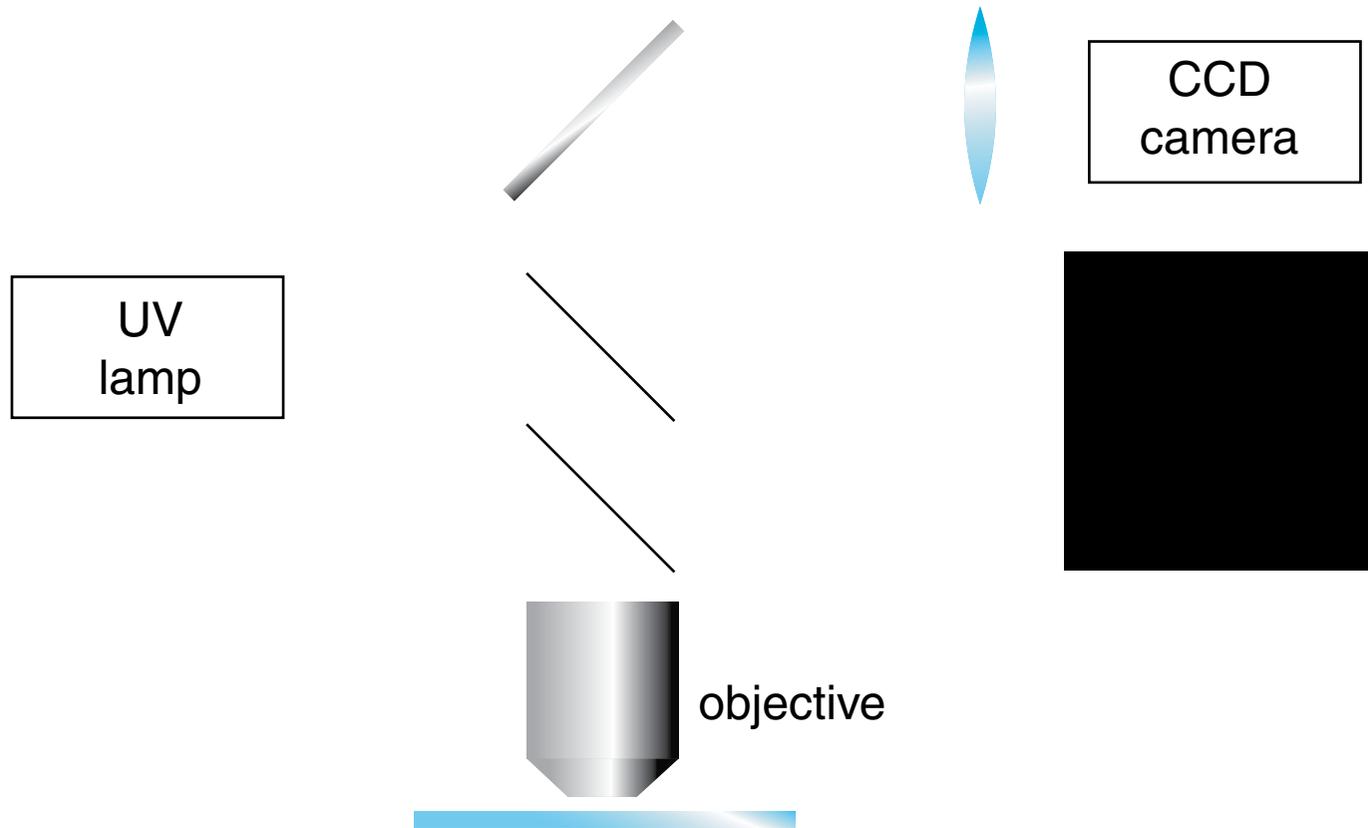

Outline

- femtosecond micromachining
 - **subcellular surgery**
 - nanoneurosurgery
- 

Subcellular surgery

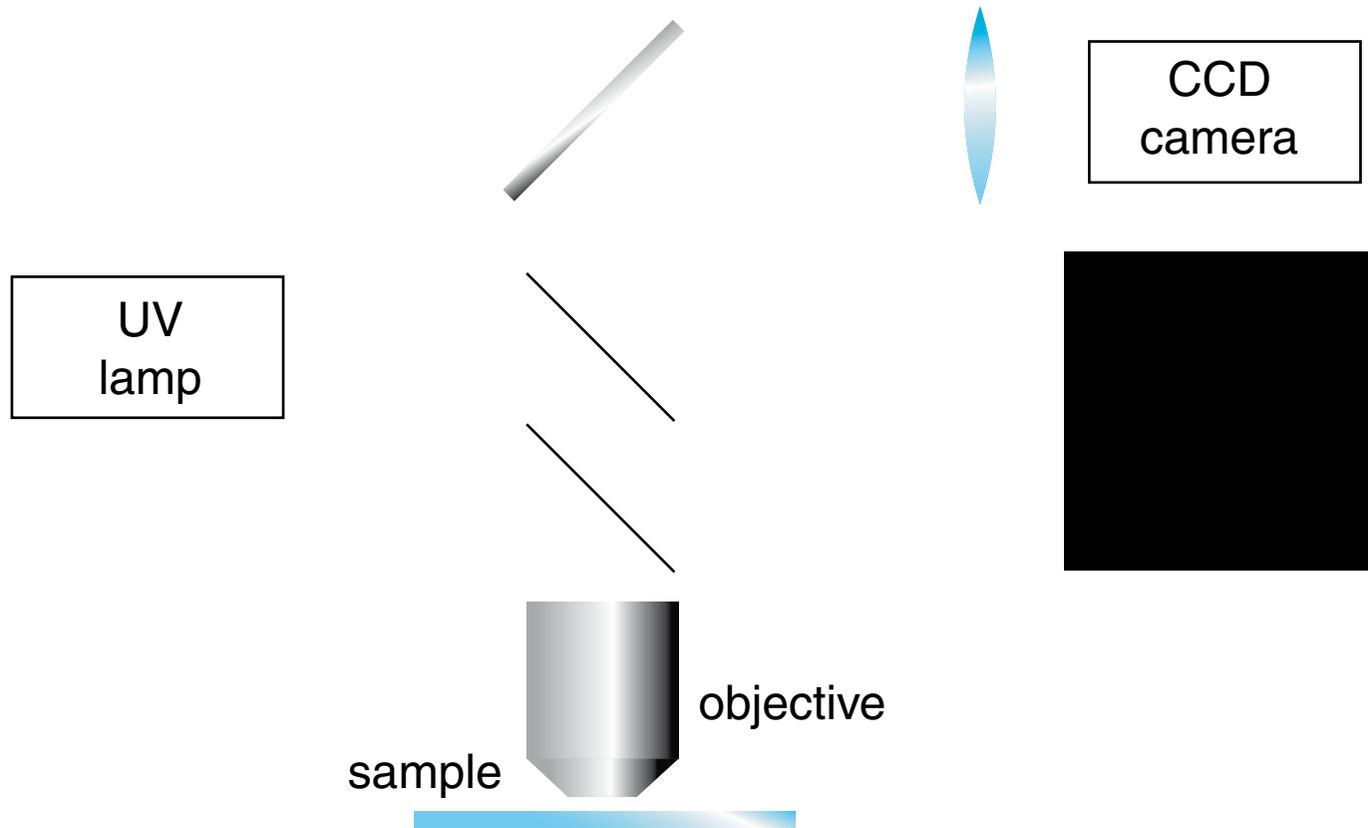

Q: can we ablate material on the subcellular scale?

Subcellular surgery

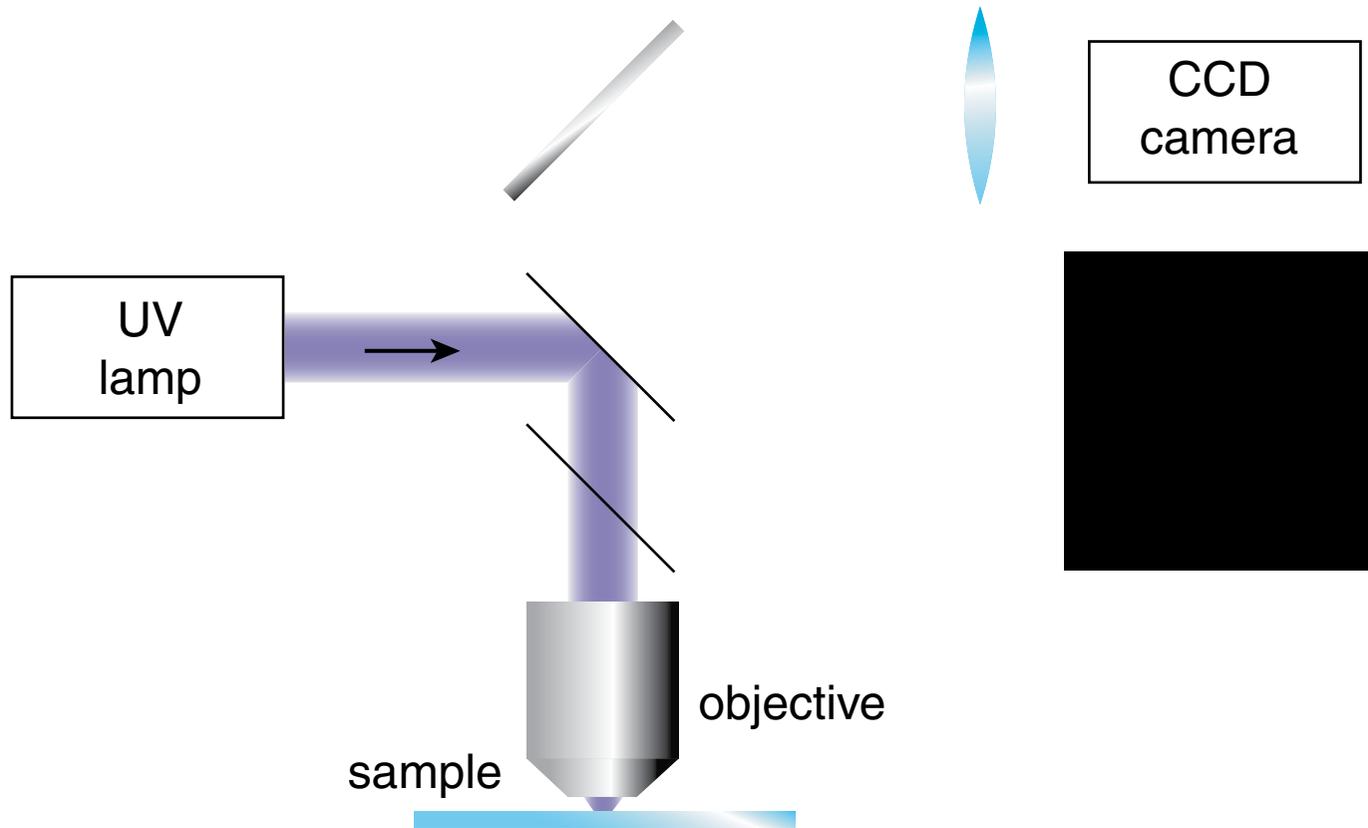

epi-fluorescence microscope

Subcellular surgery

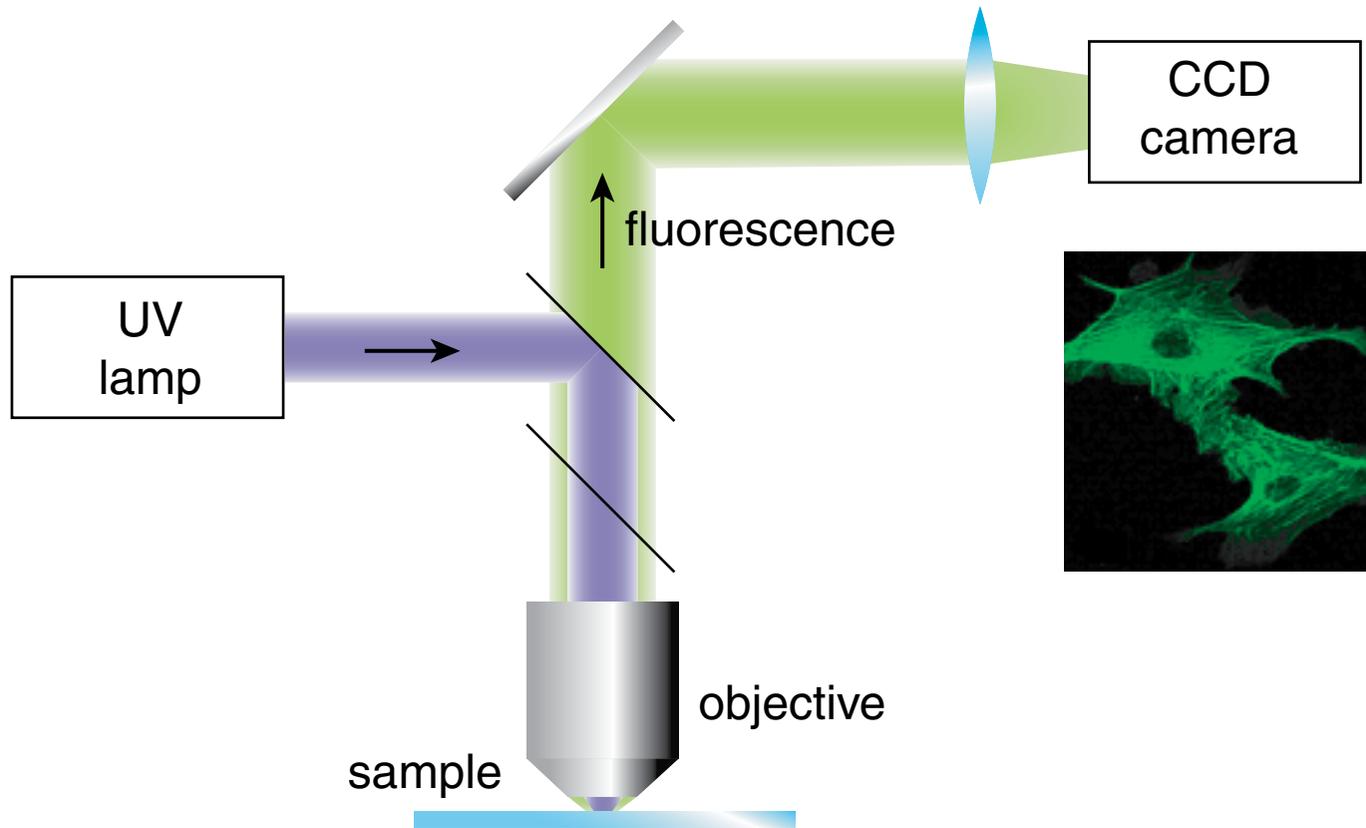

fluorescently label sample

Subcellular surgery

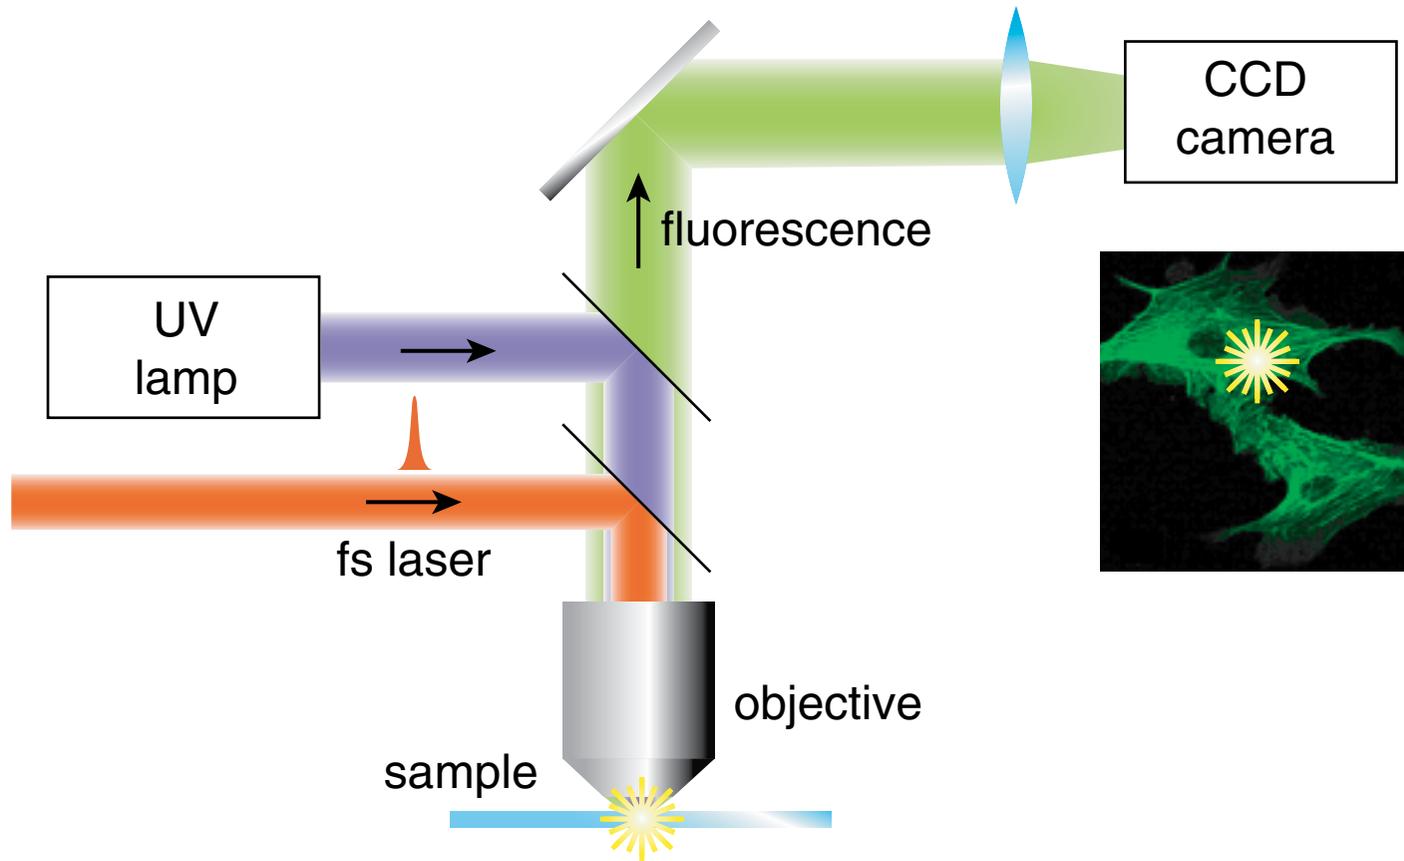

UV illumination...

Subcellular surgery

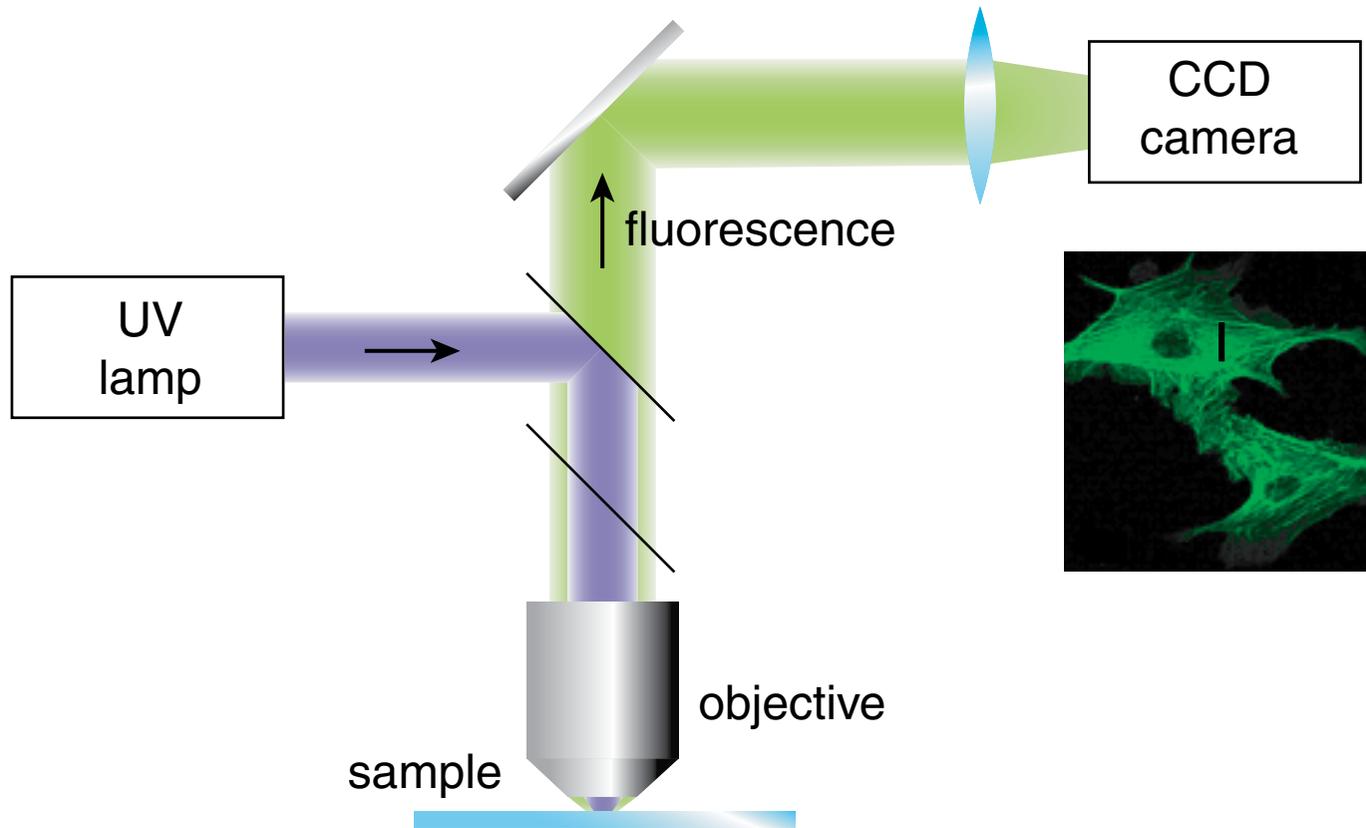

...causes fluorescence

Subcellular surgery

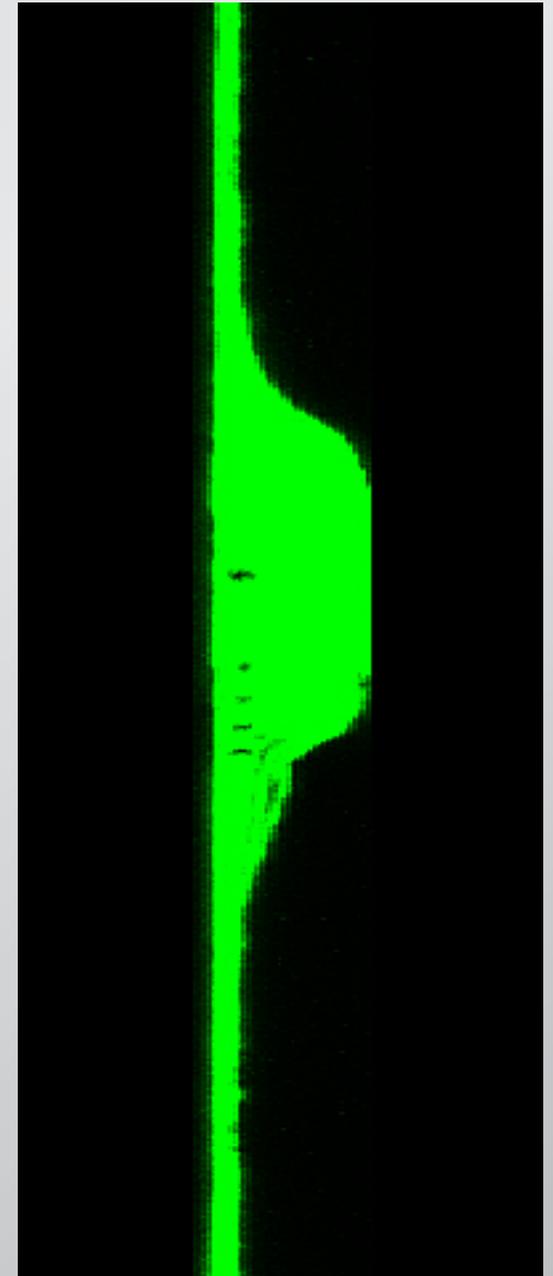

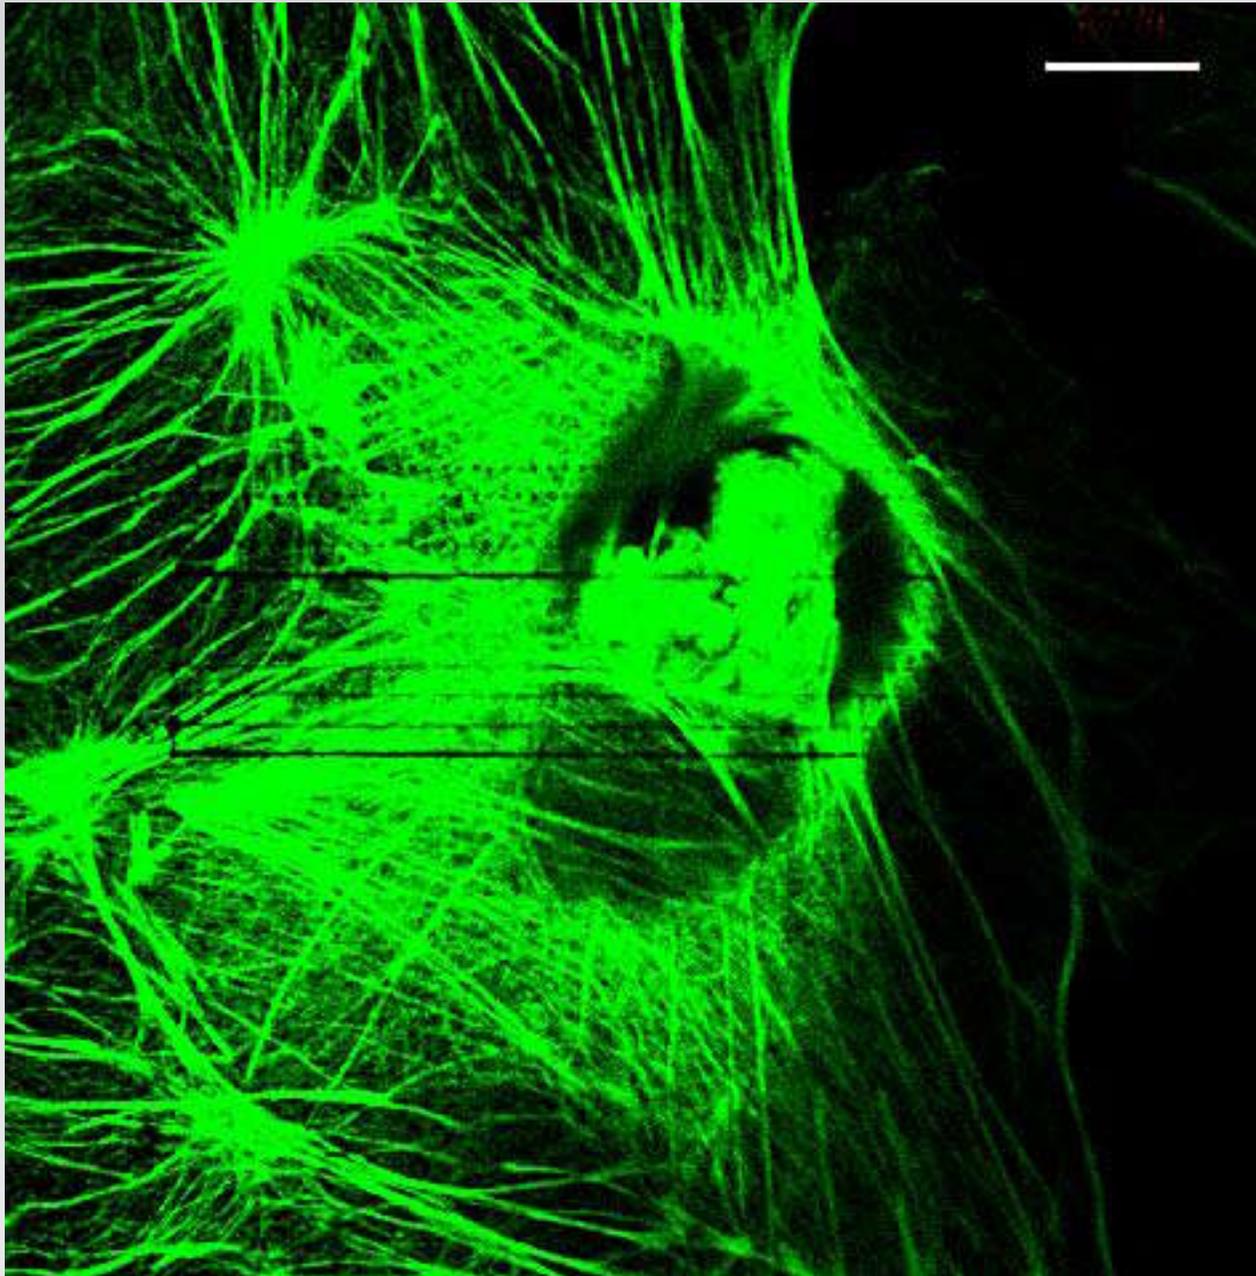

irradiate with fs laser beam

Subcellular surgery

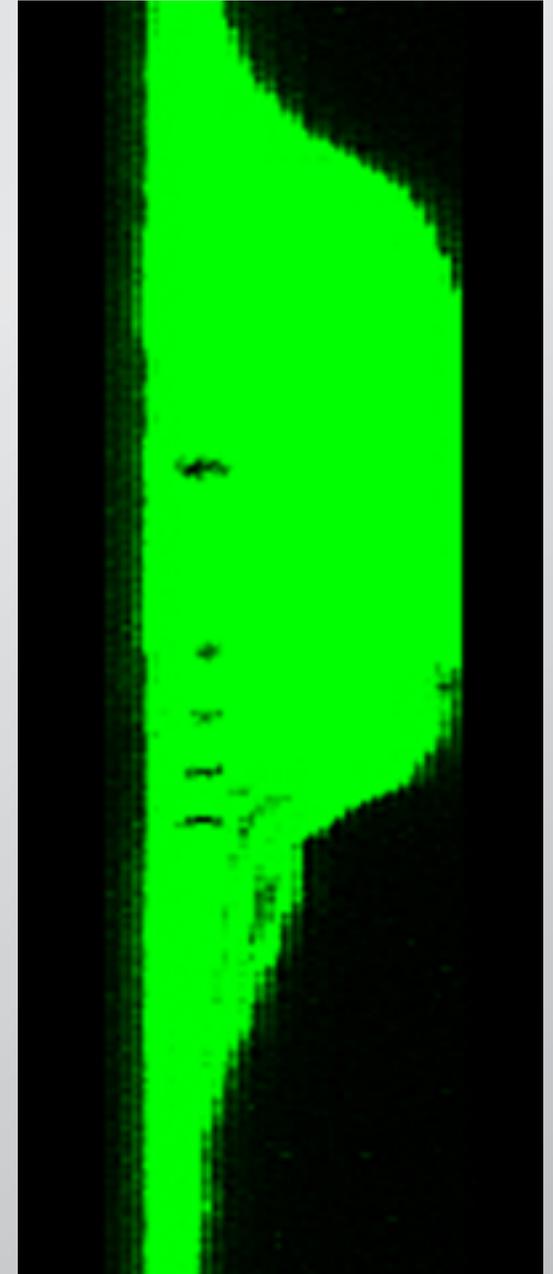

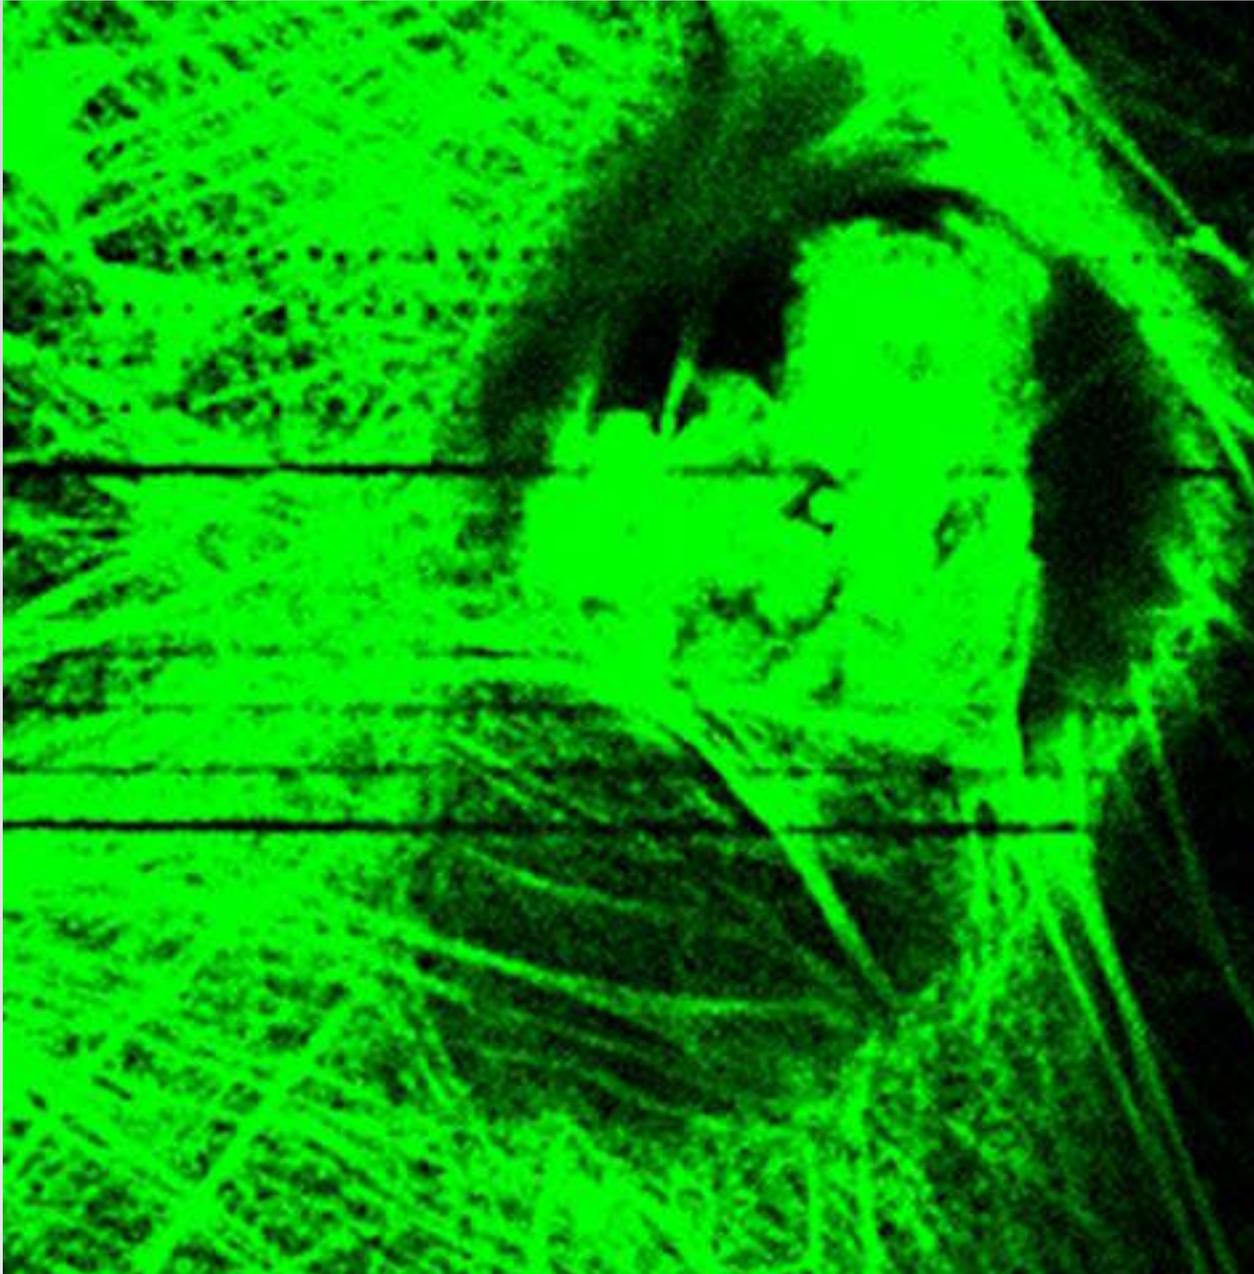

examine resulting ablation

Subcellular surgery

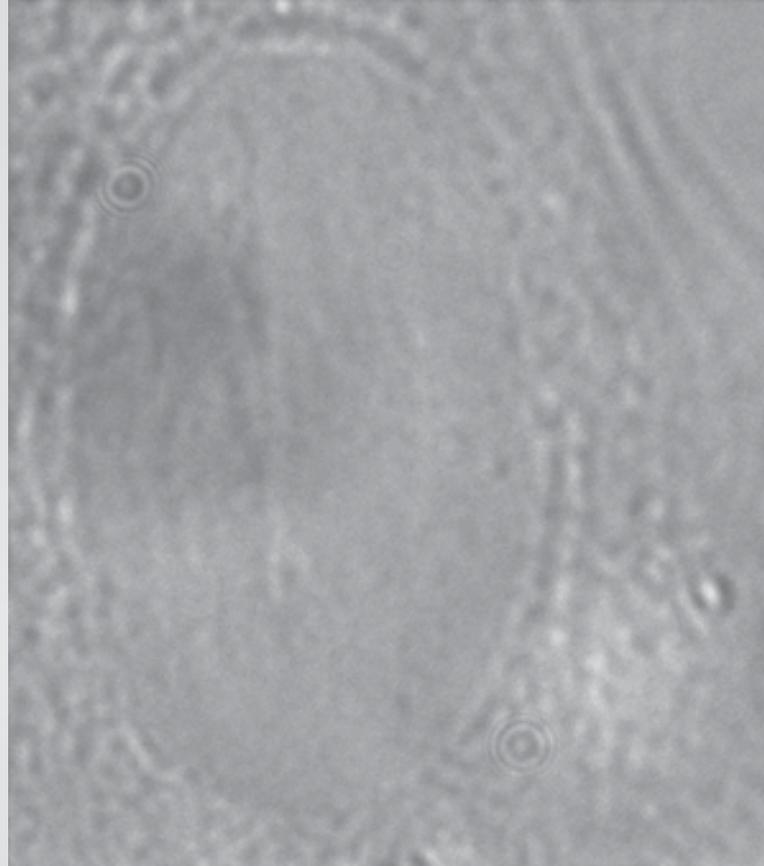

Subcellular surgery

Q: subcellular surgery on live cells?

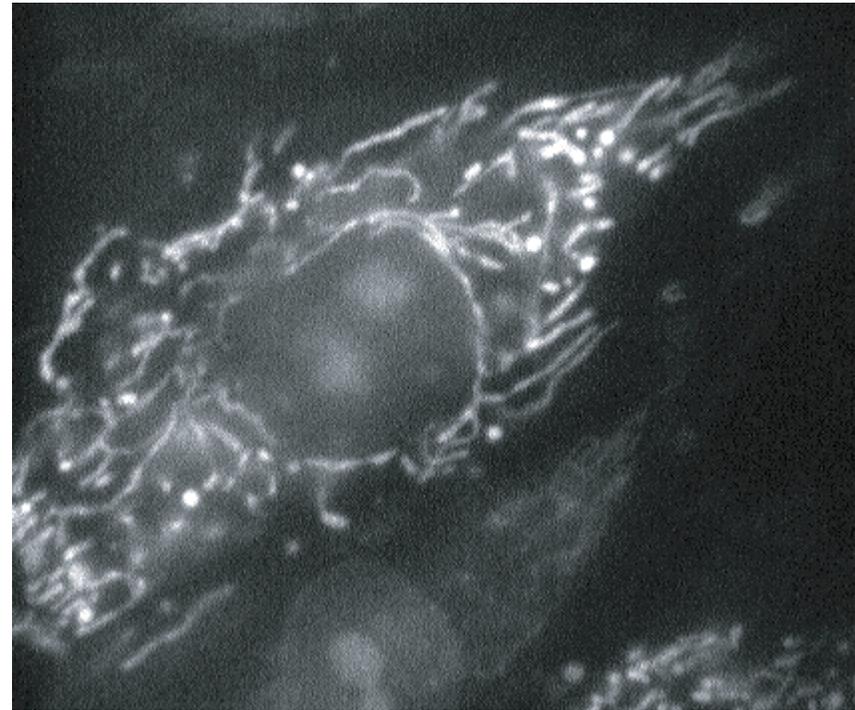

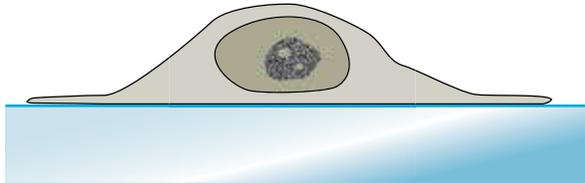

A fluorescence microscopy image showing a cell with a highly branched and interconnected network of glowing yellow-green filaments, likely representing the cytoskeleton. The filaments are thin and thread-like, forming a complex web that fills most of the cell's volume. The background is dark, making the glowing structures stand out prominently.

Subcellular surgery

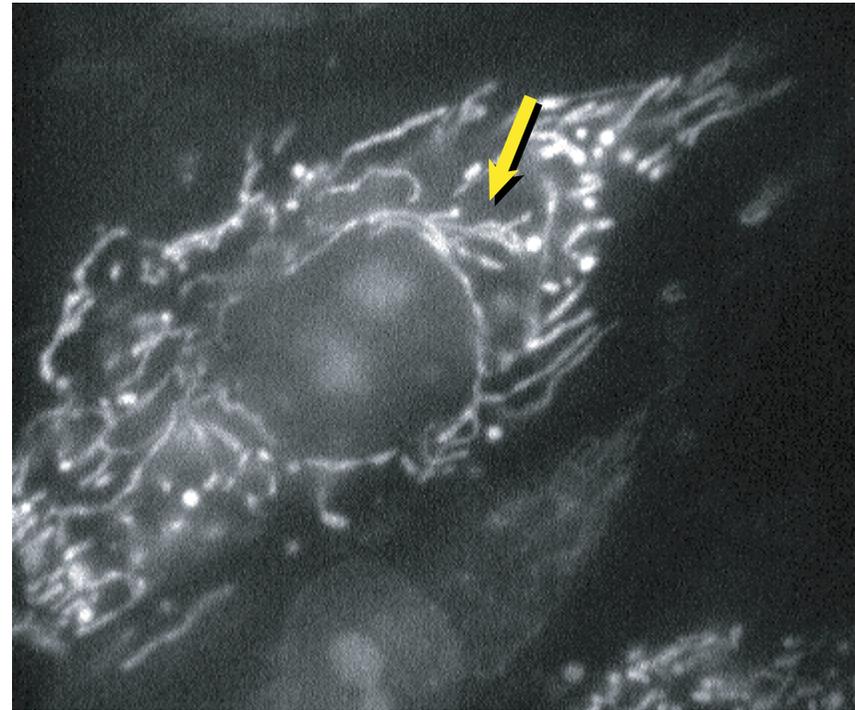

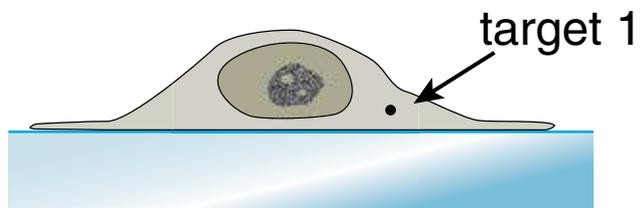

Subcellular surgery

ethyidium bromide test

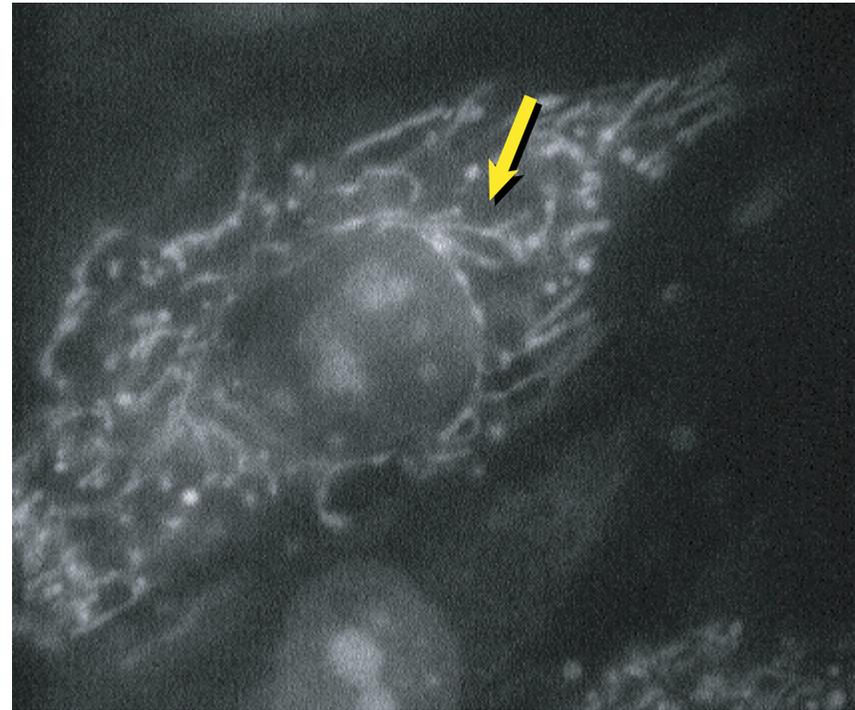

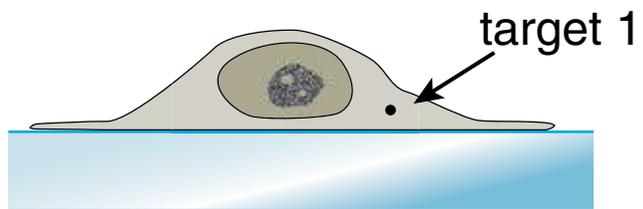

Subcellular surgery

ethyidium bromide test

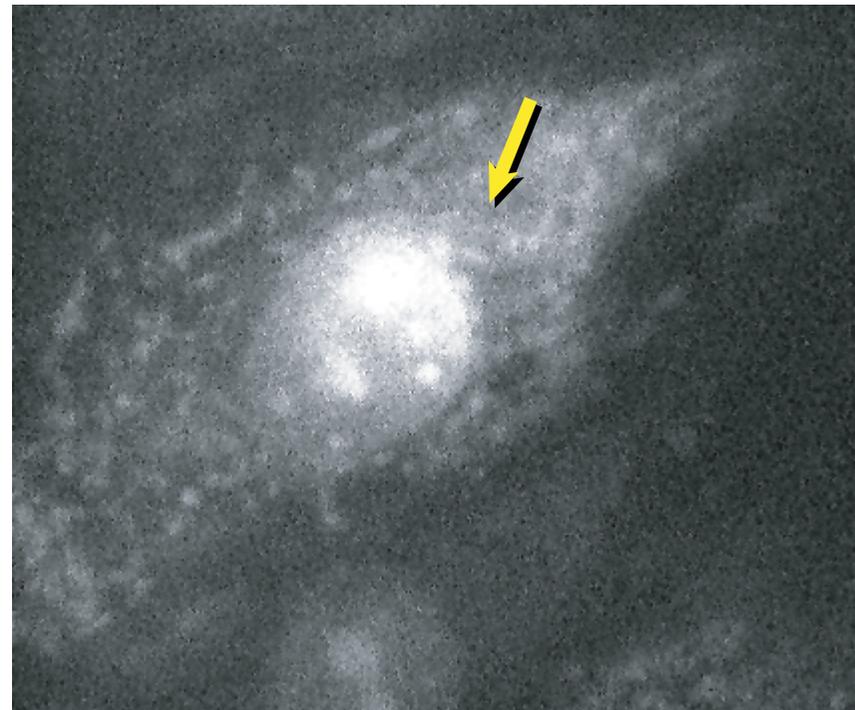

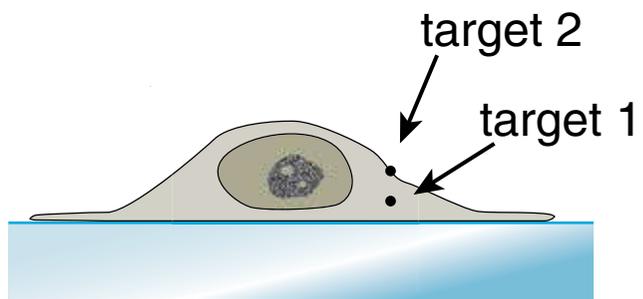

Subcellular surgery

ethyidium bromide test

Subcellular surgery

ethyidium bromide test

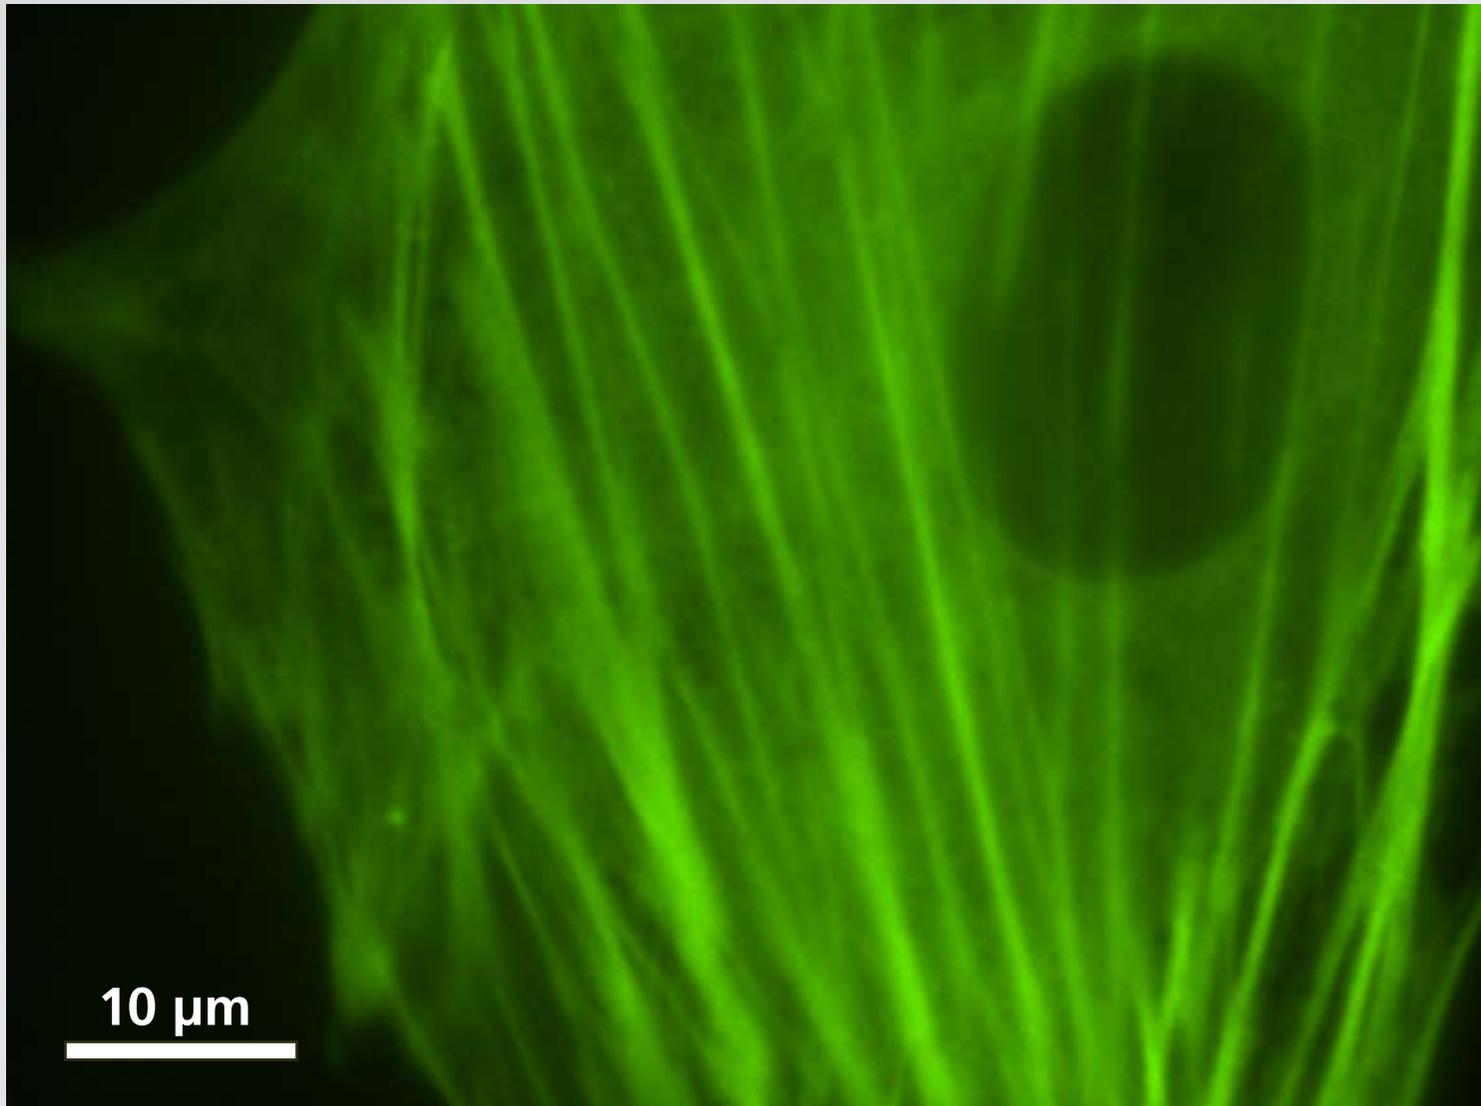

Subcellular surgery

Q: can we probe the dynamics of the cytoskeleton?

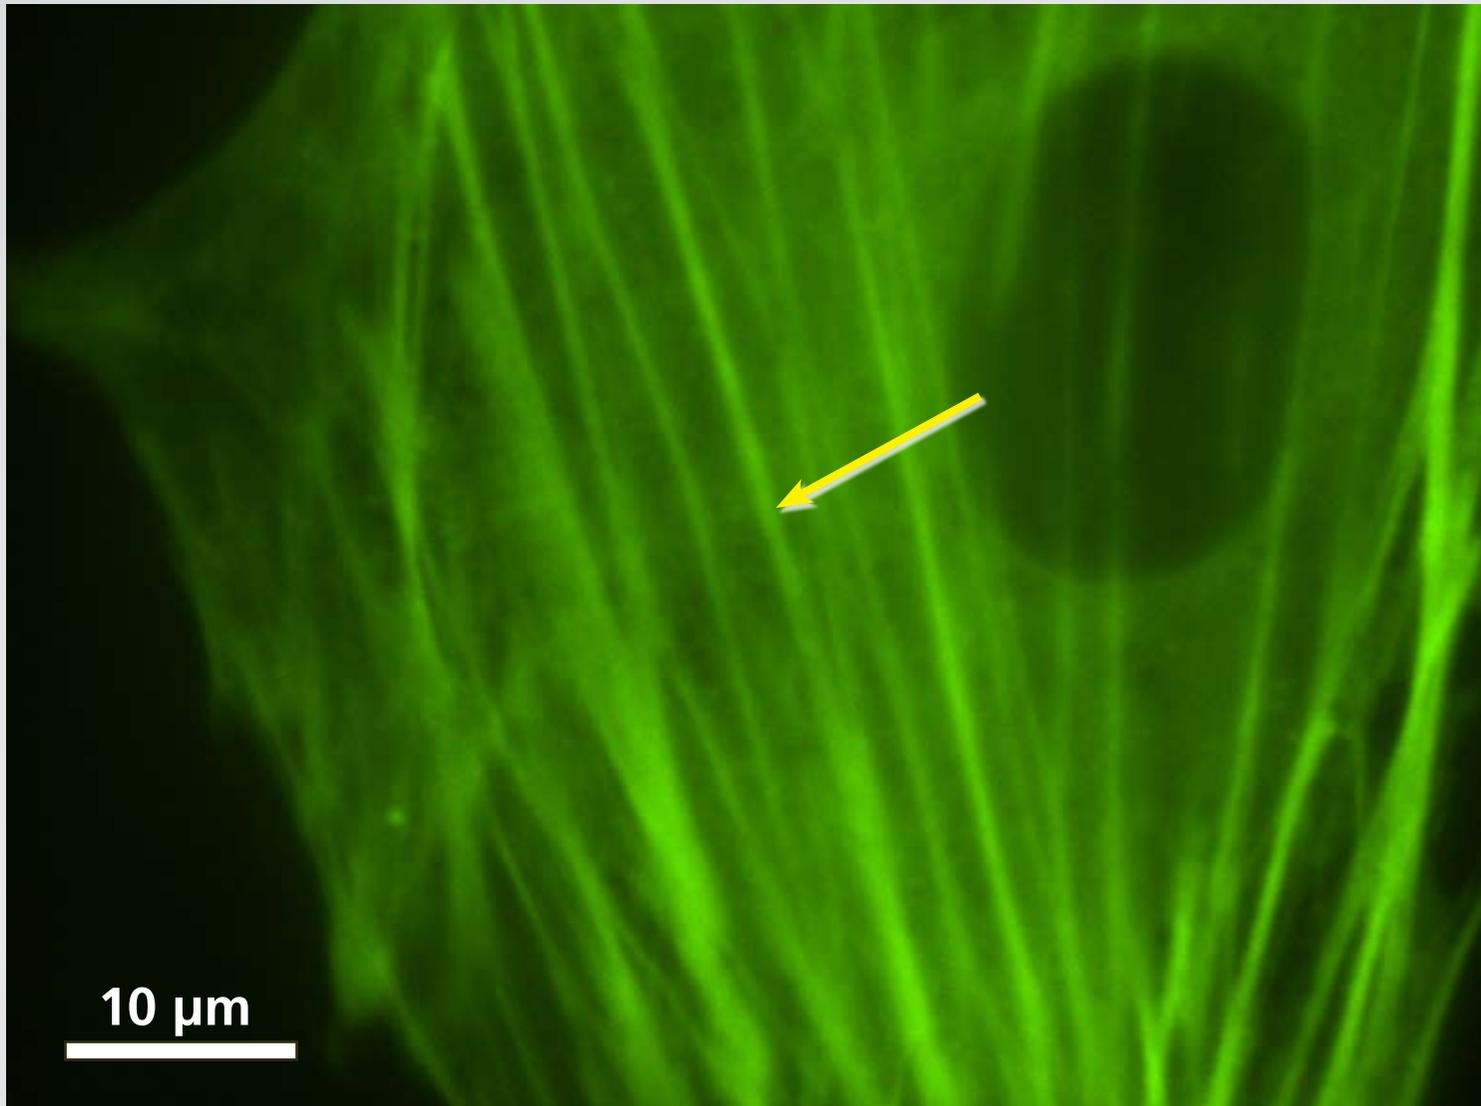

Subcellular surgery

YFP-labeled actin fiber network of a live cell

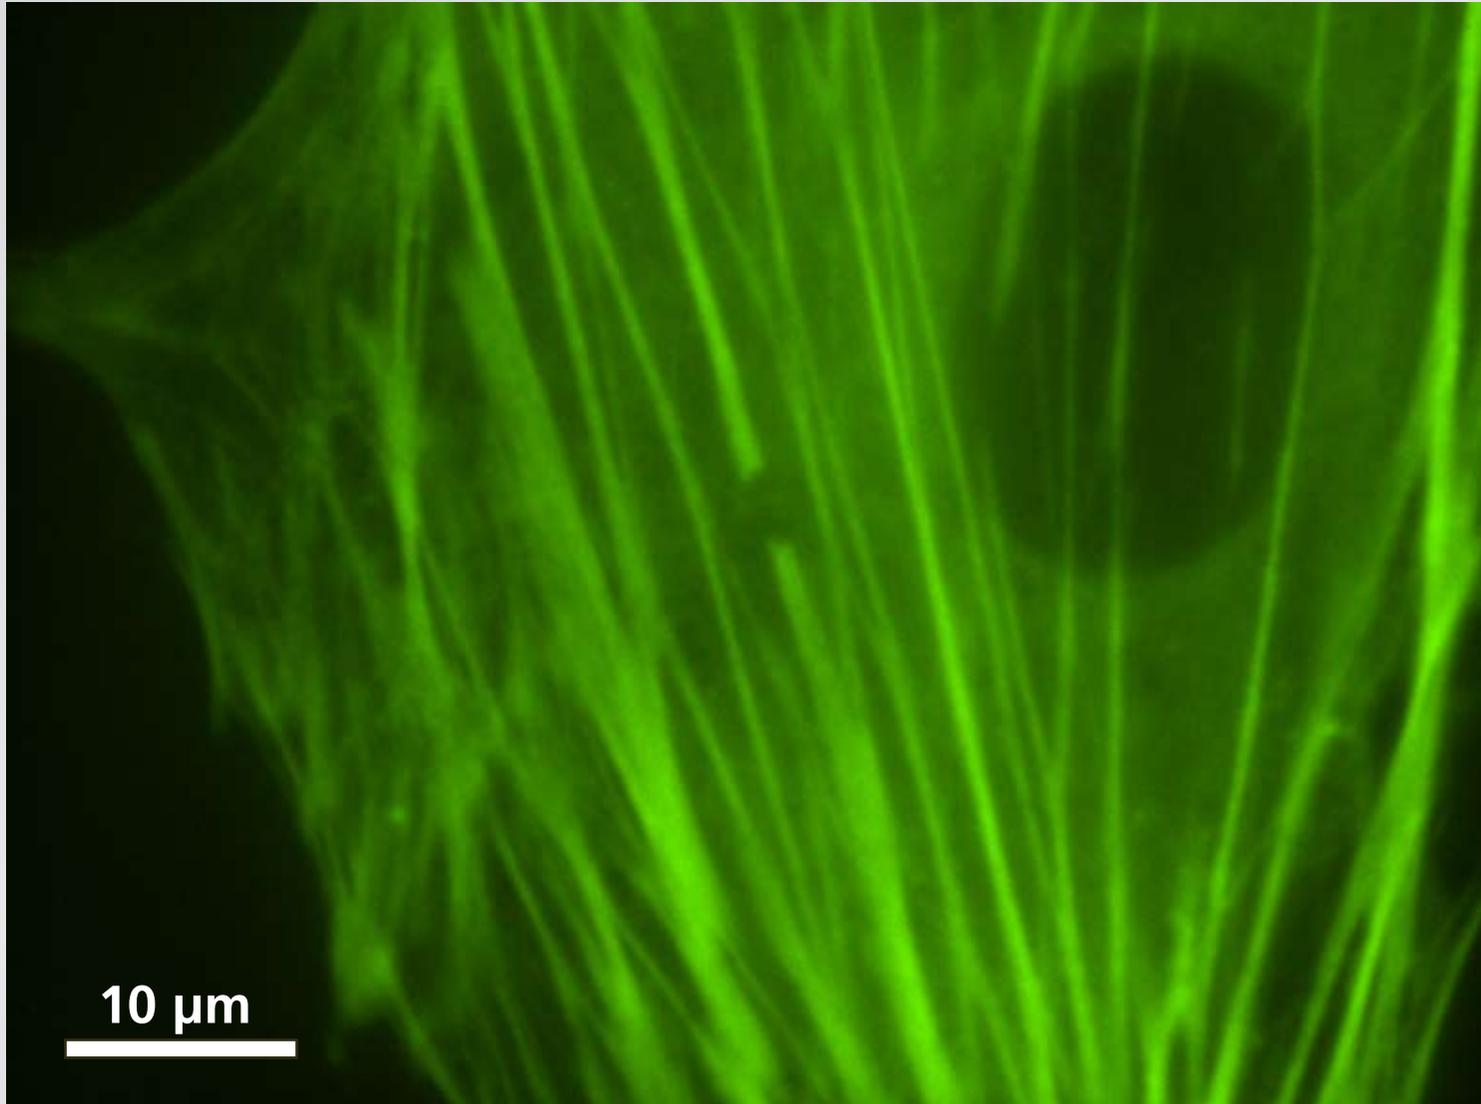

Subcellular surgery

cut a single fiber bundle

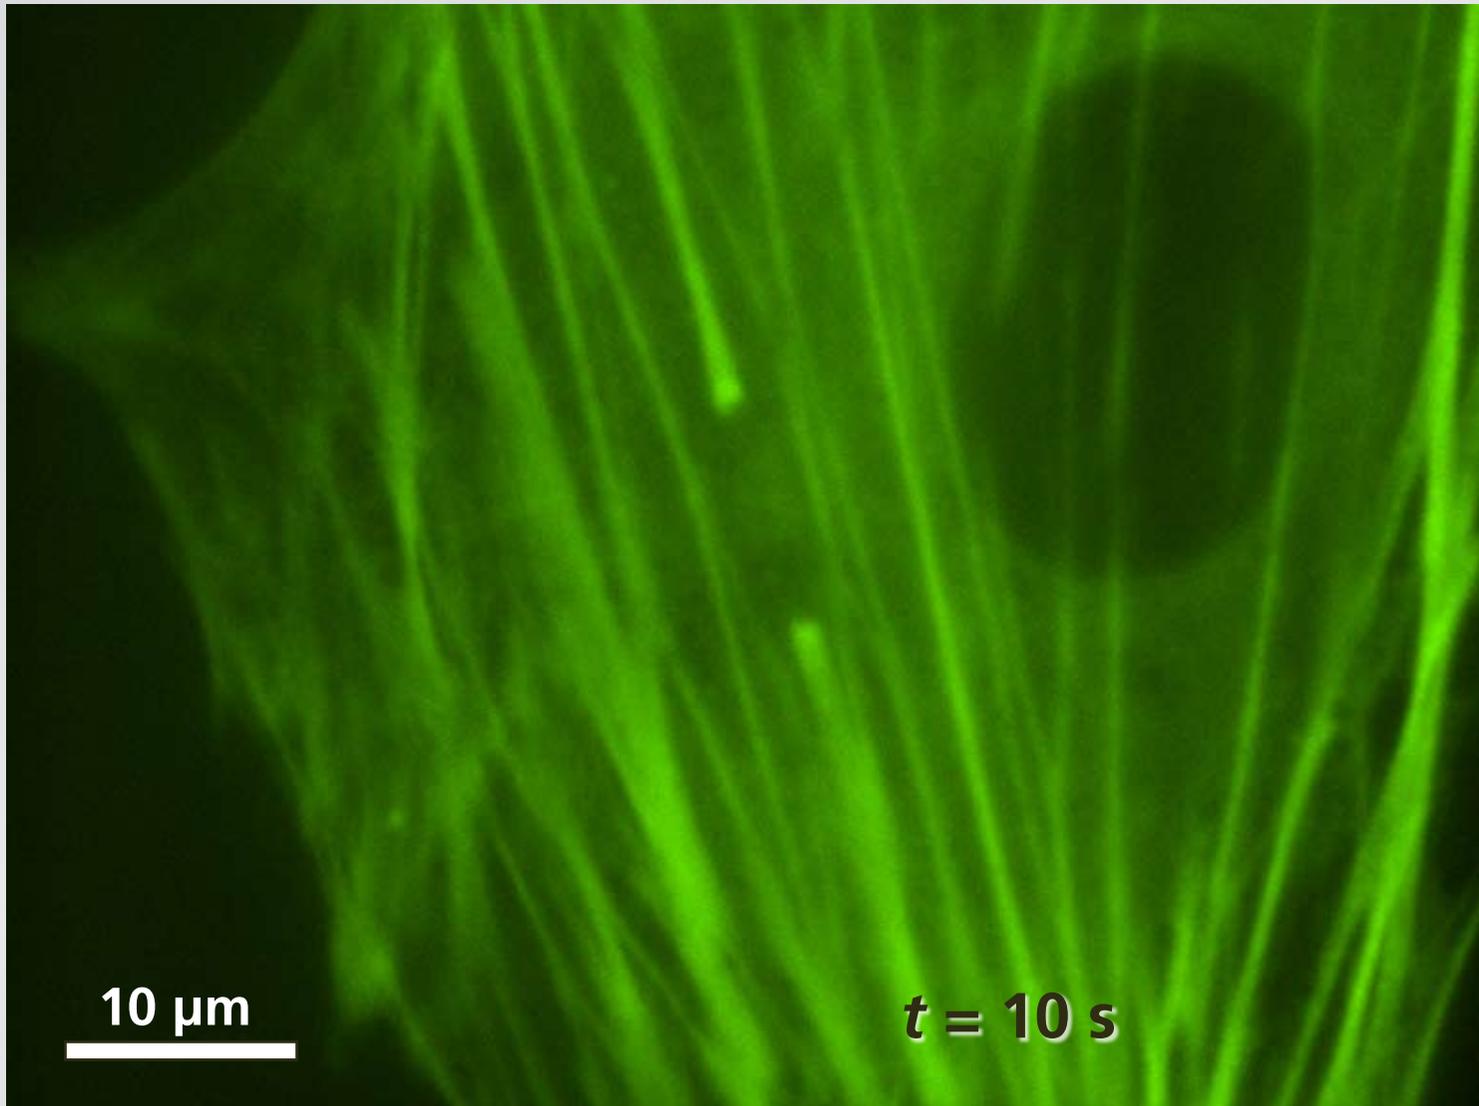

Subcellular surgery

cut a single fiber bundle

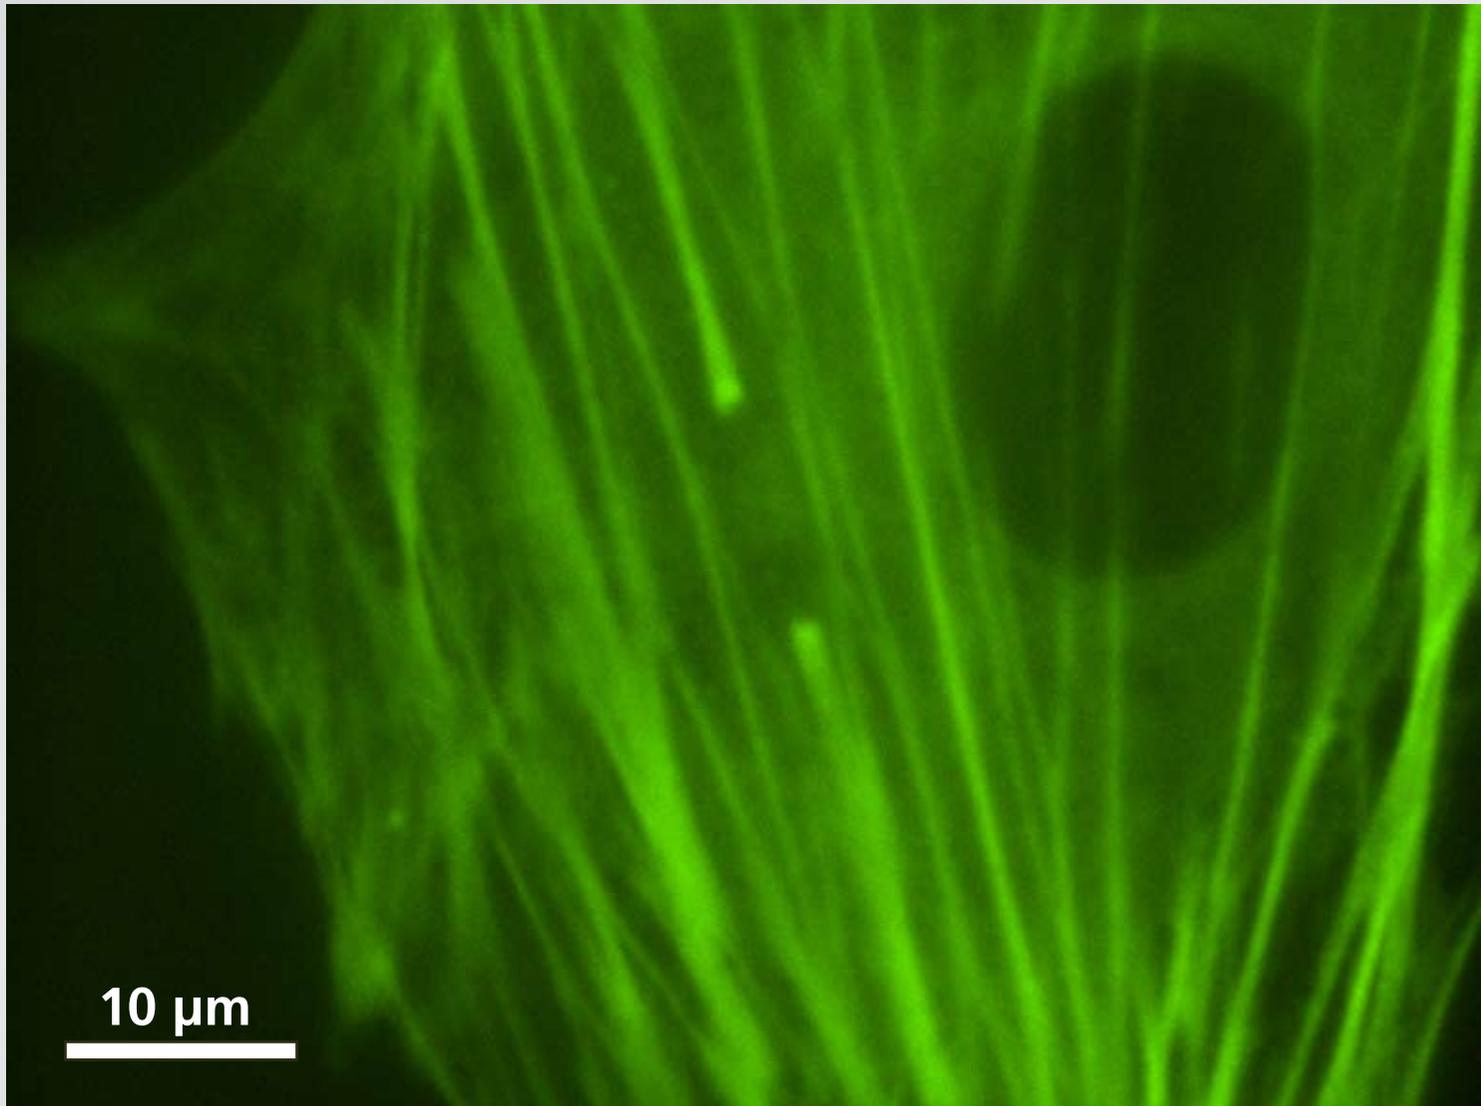

Subcellular surgery

gap widens with time

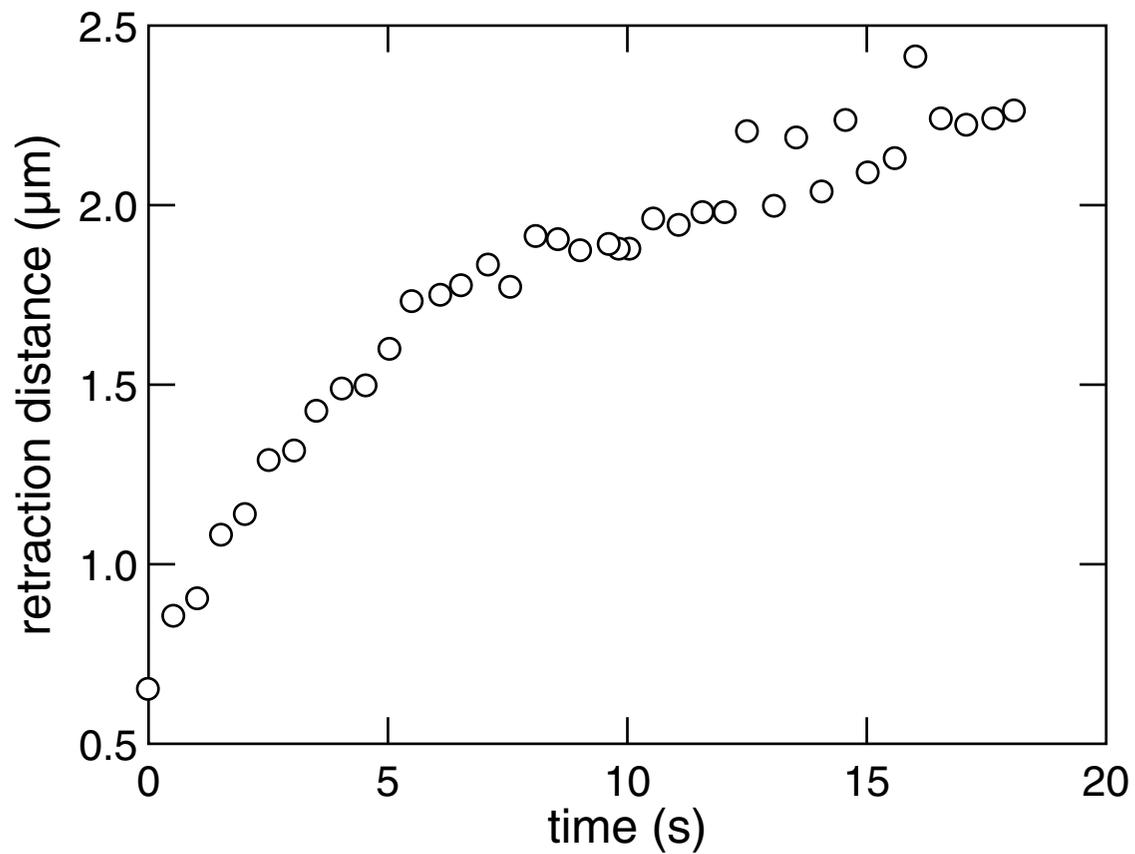

Subcellular surgery

dynamics provides information on *in vivo* mechanics

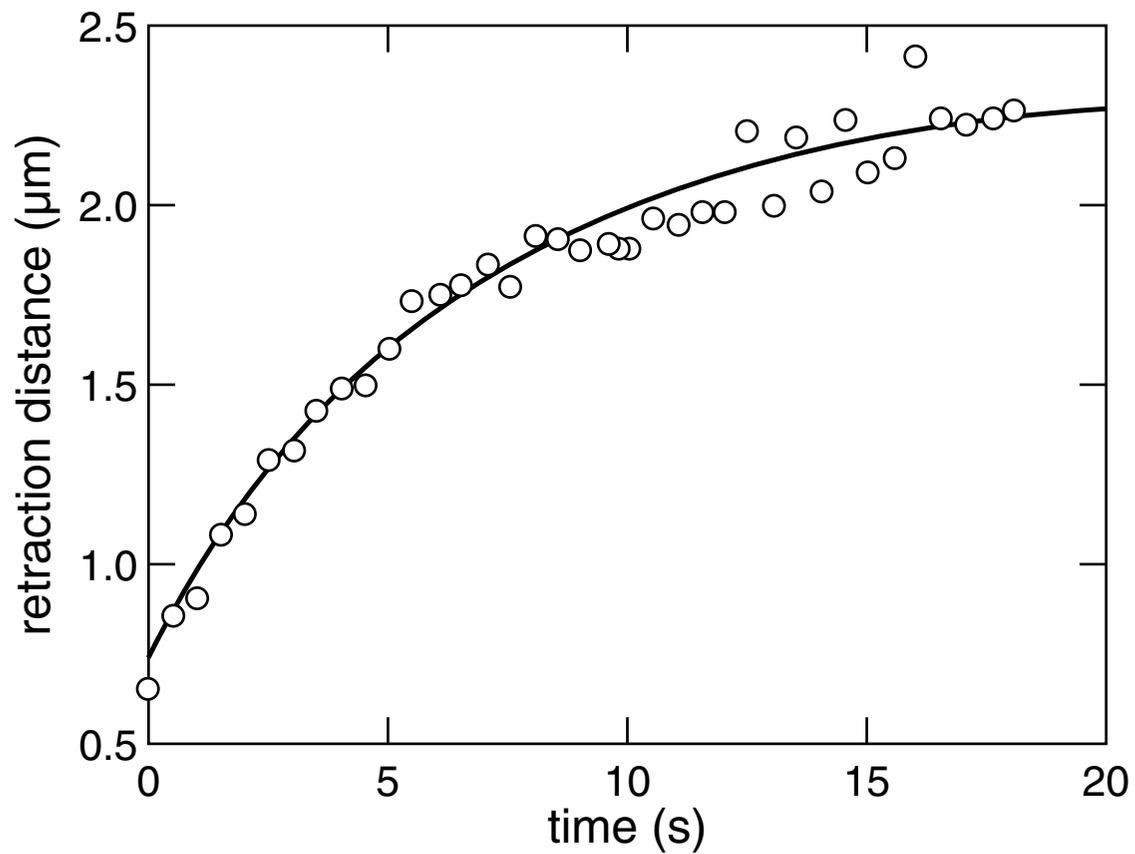

Subcellular surgery

overdamped spring: $\Delta L = L_{\infty}(1 - e^{-t/\tau}) + L_0$

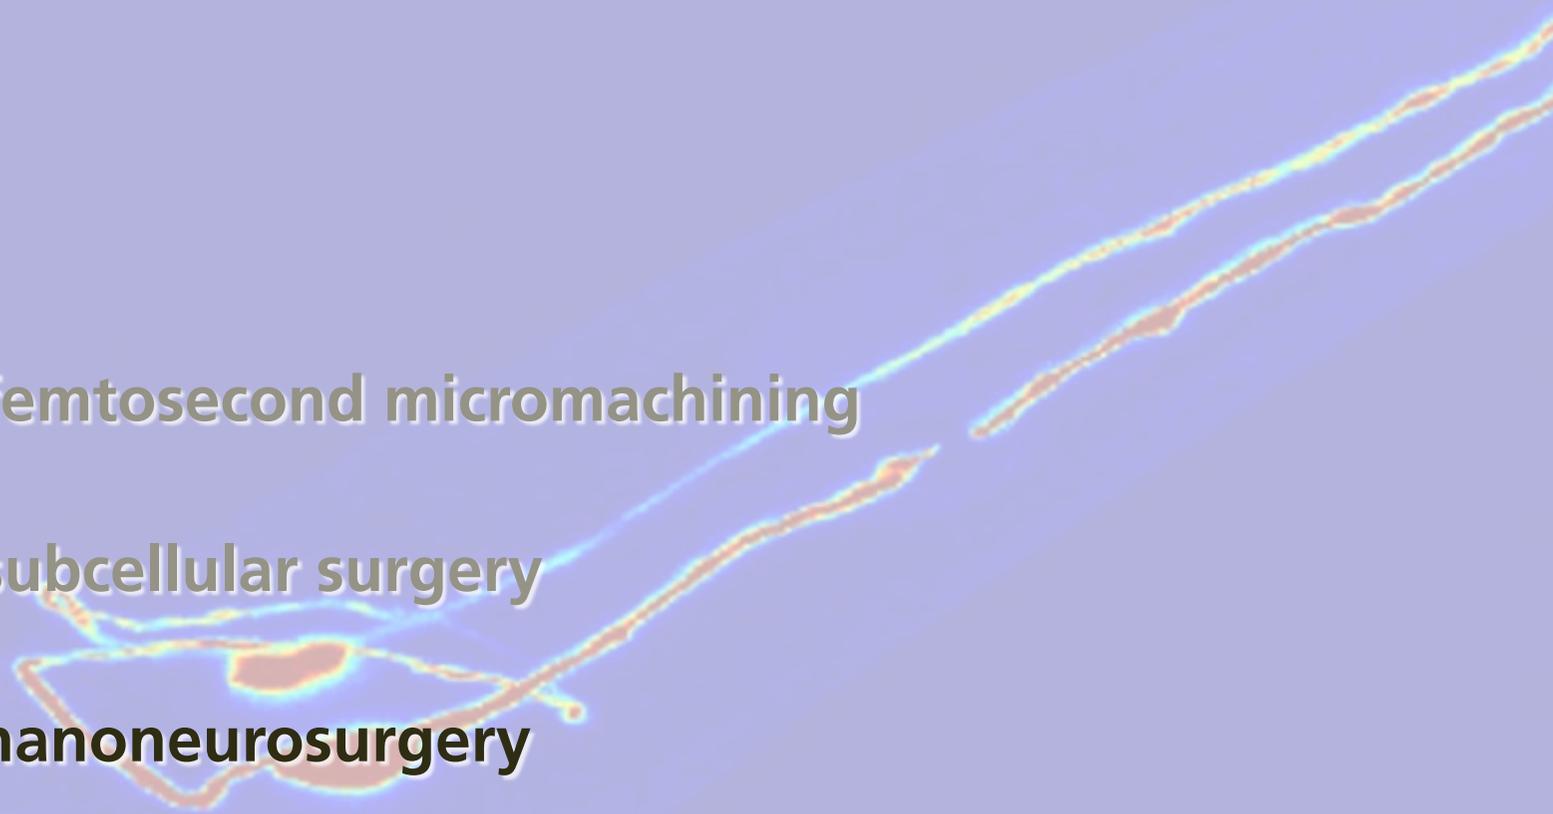

Subcellular surgery

overdamped spring: $\Delta L = L_{\infty}(1 - e^{-t/\tau}) + L_0$

- 

Nanoneurosurgery

Q: can we probe the neurological origins of behavior?

Nanoneurosurgery

Caenorhabditis elegans

Juergen Berger & Ralph Sommer
Max-Planck Institute for Developmental Biology

Nanoneurosurgery

Caenorhabditis elegans

- simple model organism
- similarities to higher organisms
- genome fully sequenced
- easy to handle

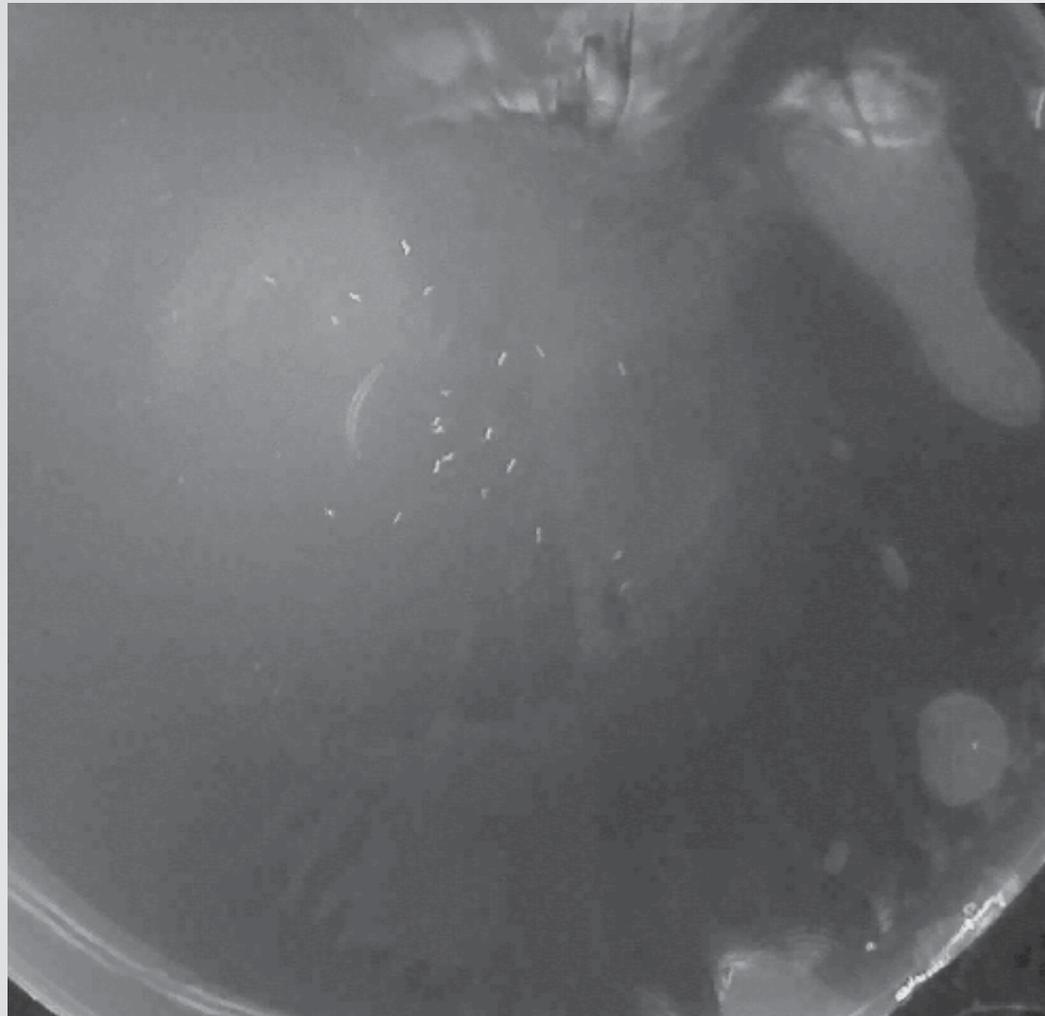

Nanoneurosurgery

Caenorhabditis elegans

- 80 μm x 1 mm
- about 1300 cells
- 302 neurons
- invariant wiring diagram
- neuronal system completely encodes behavior

Nanoneurosurgery

Caenorhabditis elegans

Nanoneurosurgery

Caenorhabditis elegans

Nanoneurosurgery

Caenorhabditis elegans

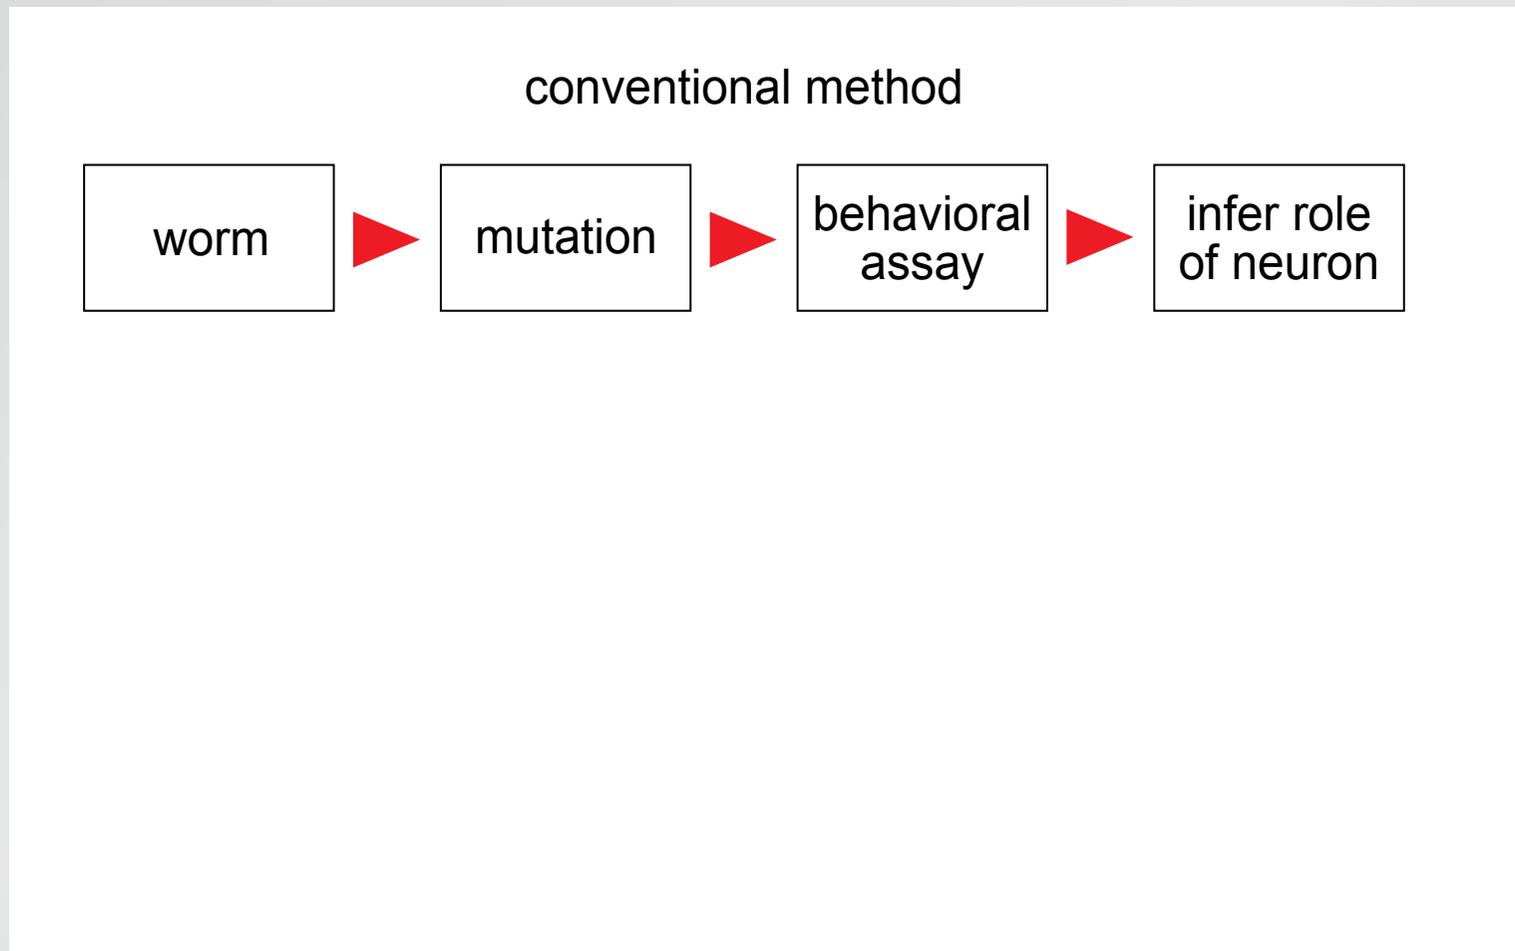

Nanoneurosurgery

Caenorhabditis elegans

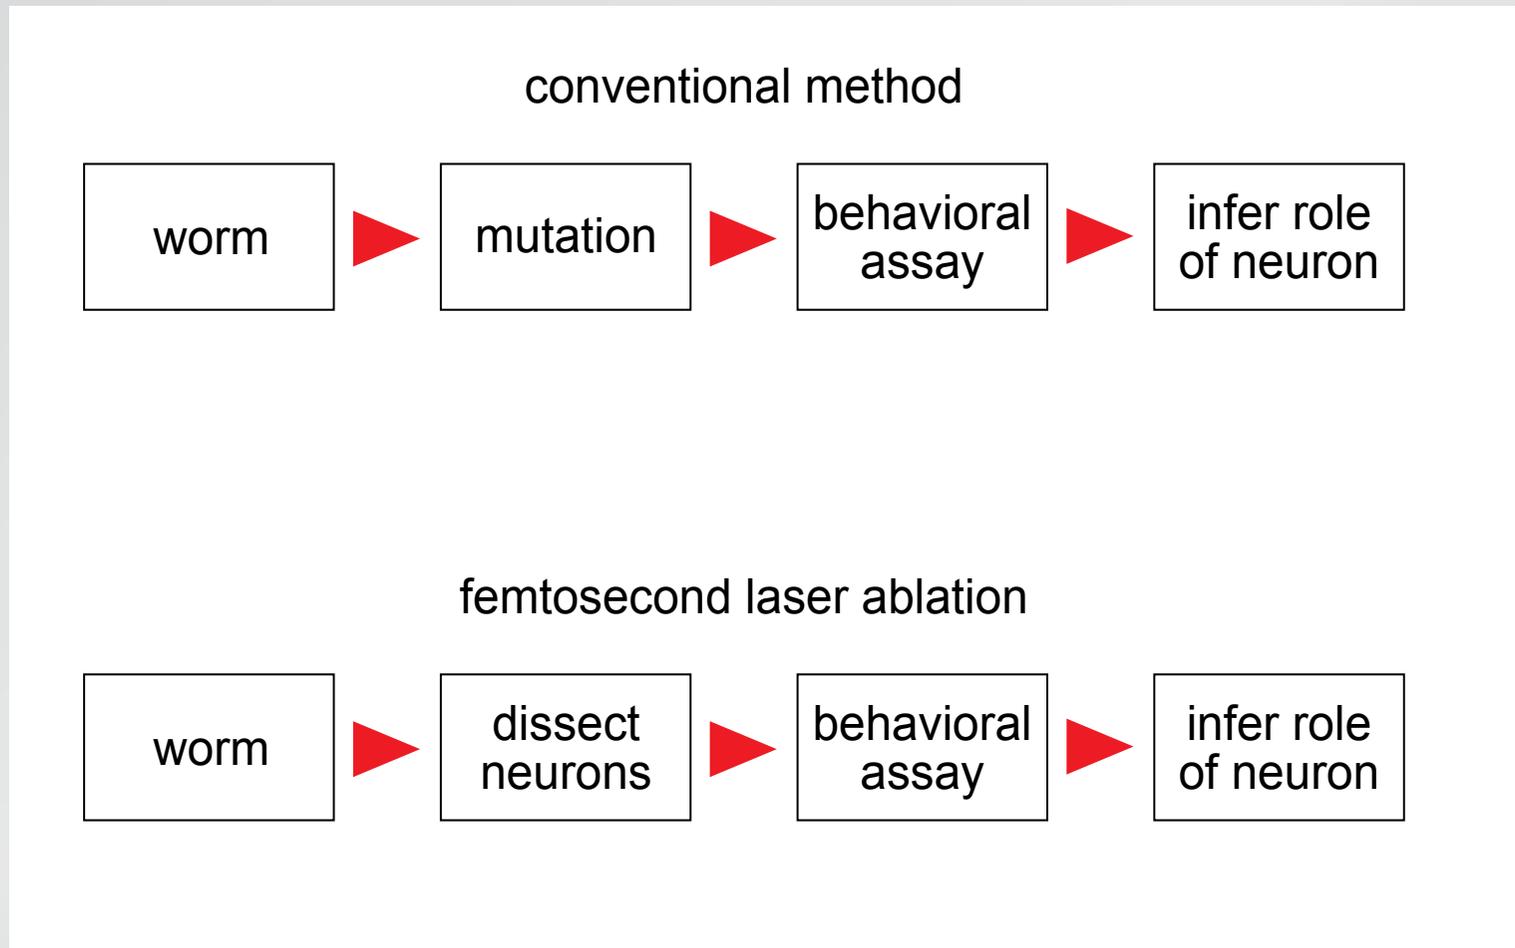

Nanoneurosurgery

Mapping behavior to neurons

Nanoneurosurgery

Mapping behavior to neurons

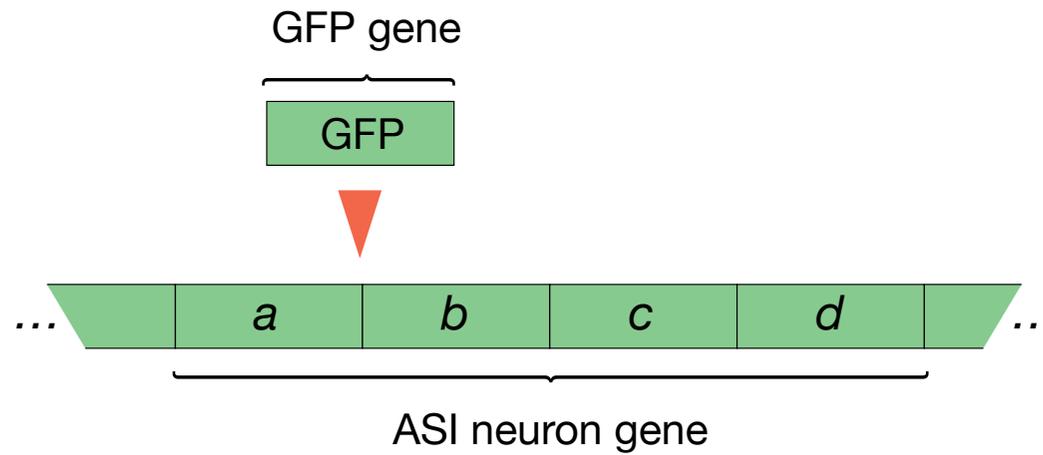

Nanoneurosurgery

ASI neurons

- responsible for chemical sensing
- ciliary projections extend through skin
- one on each side

Nanoneurosurgery

Make ASI neurons express GFP

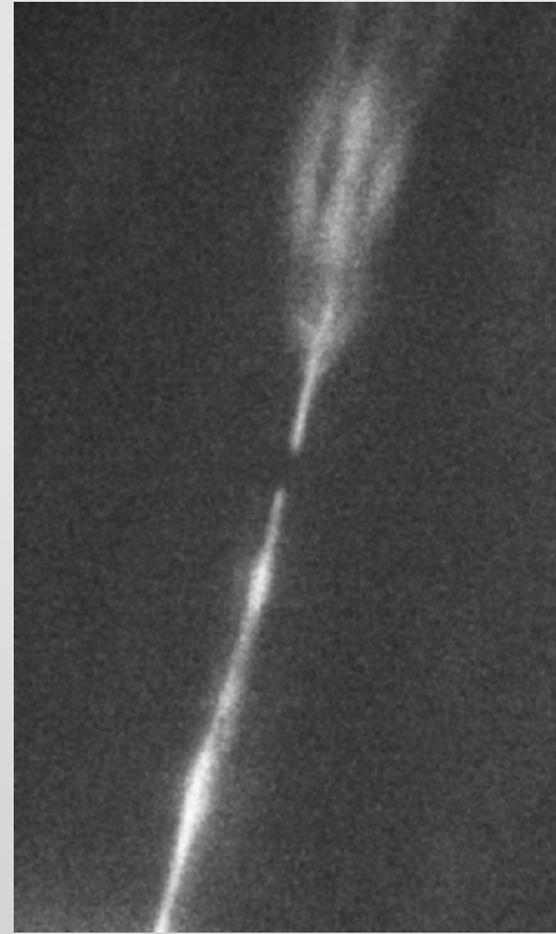

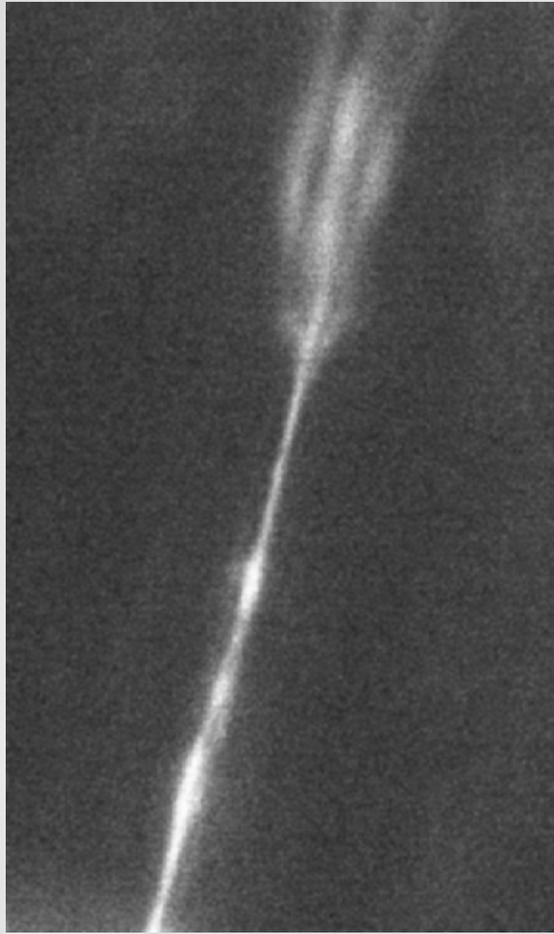

Nanoneurosurgery

GFP: absorbs UV, emits green

Nanoneurosurgery

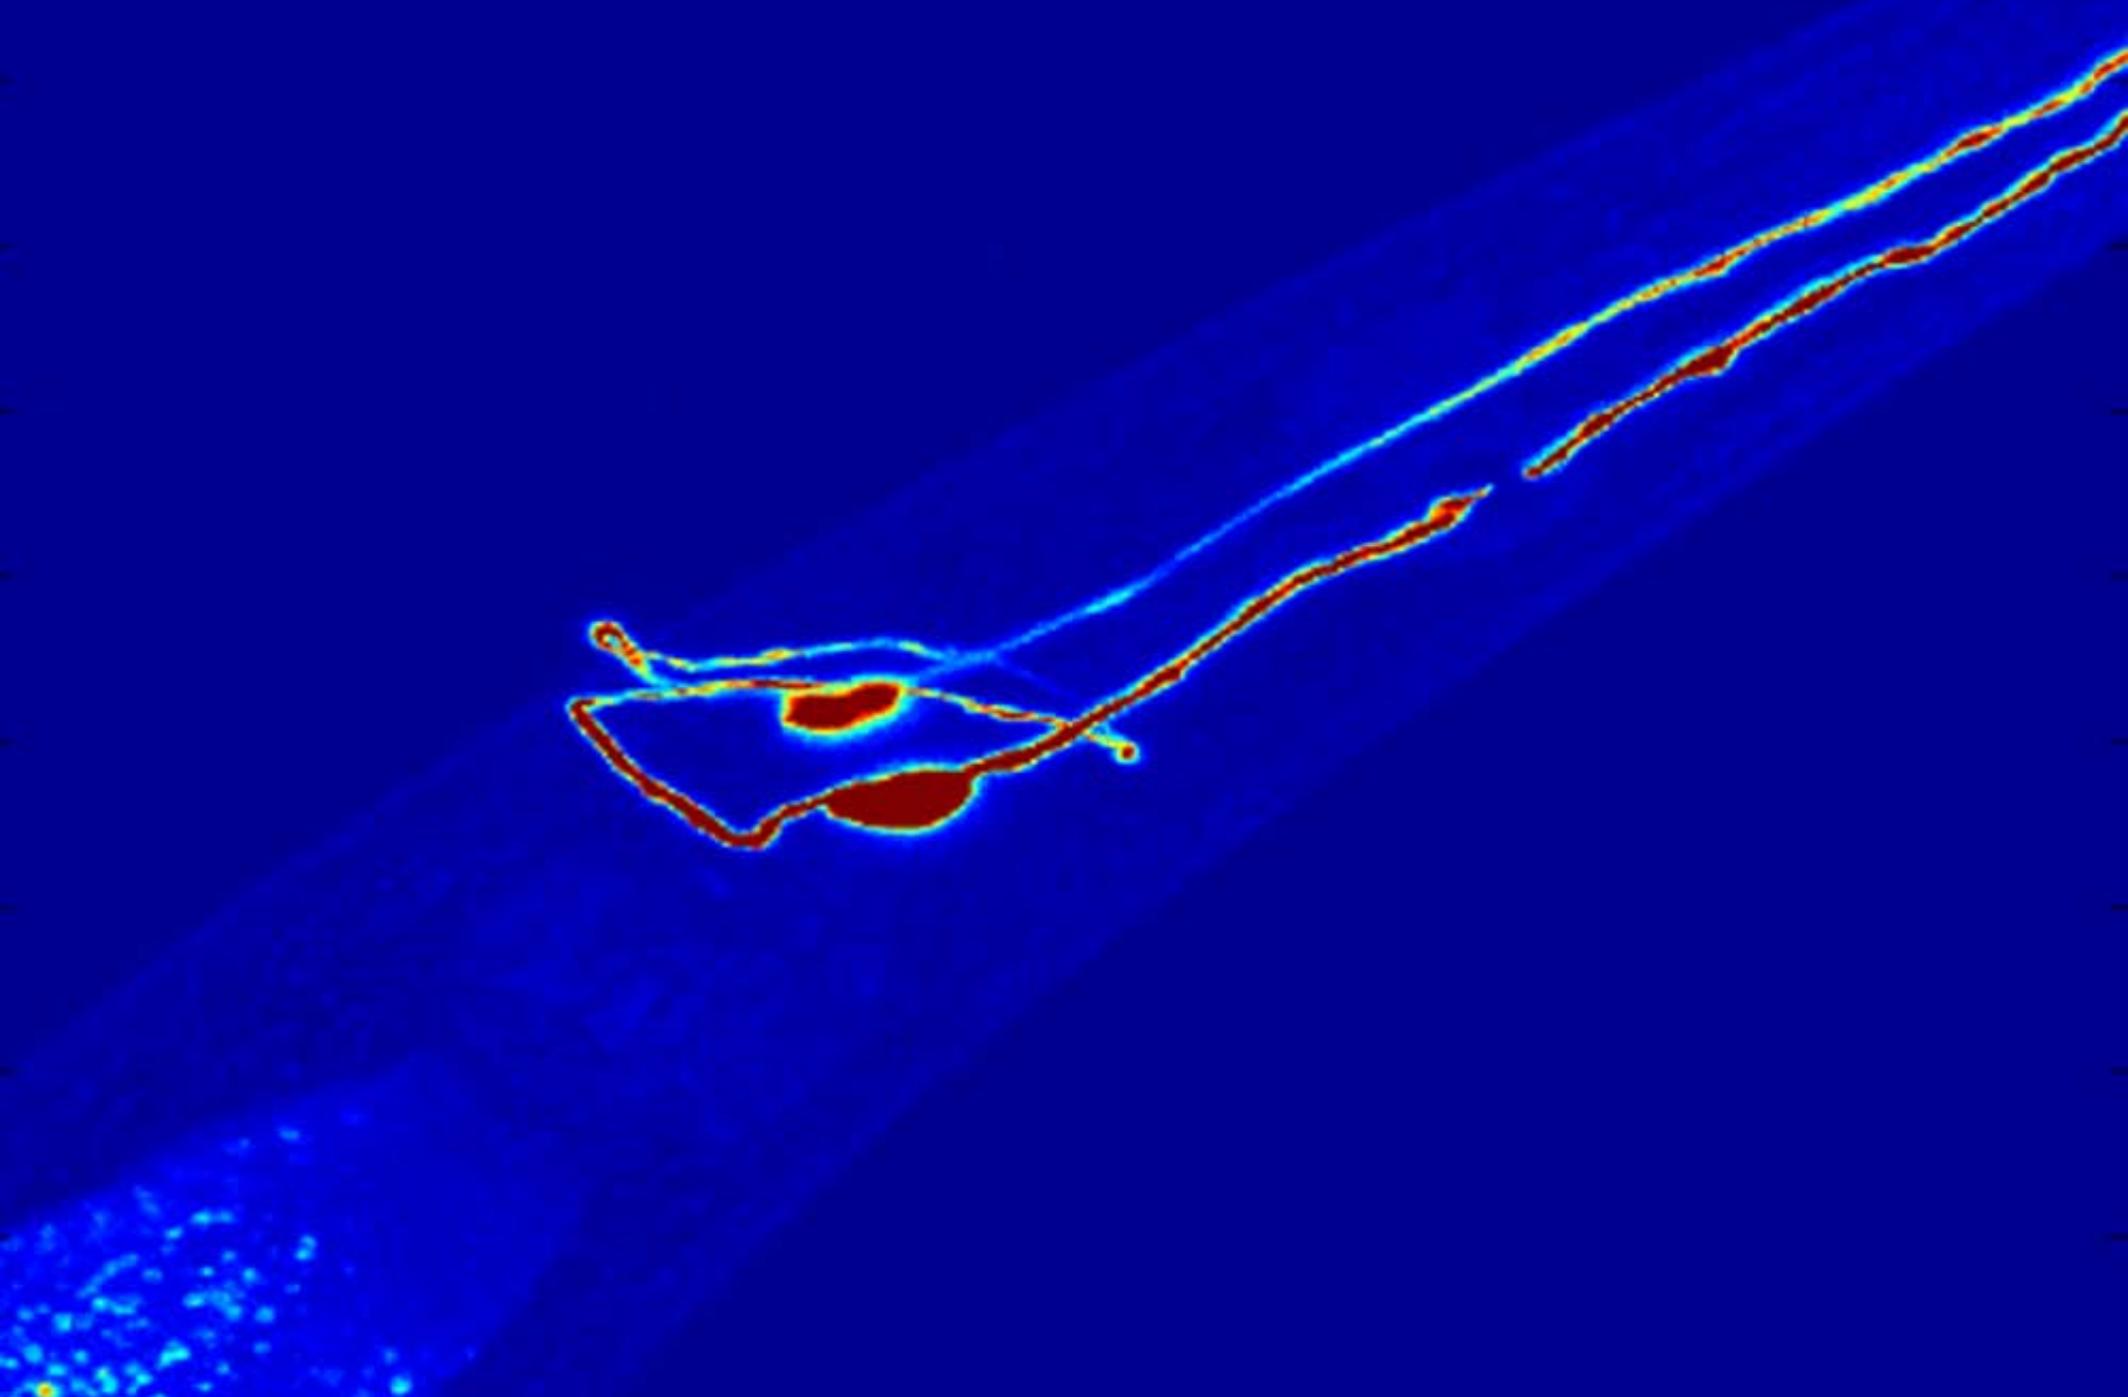

minutes after surgery with 14 nJ pulses

Nanoneurosurgery

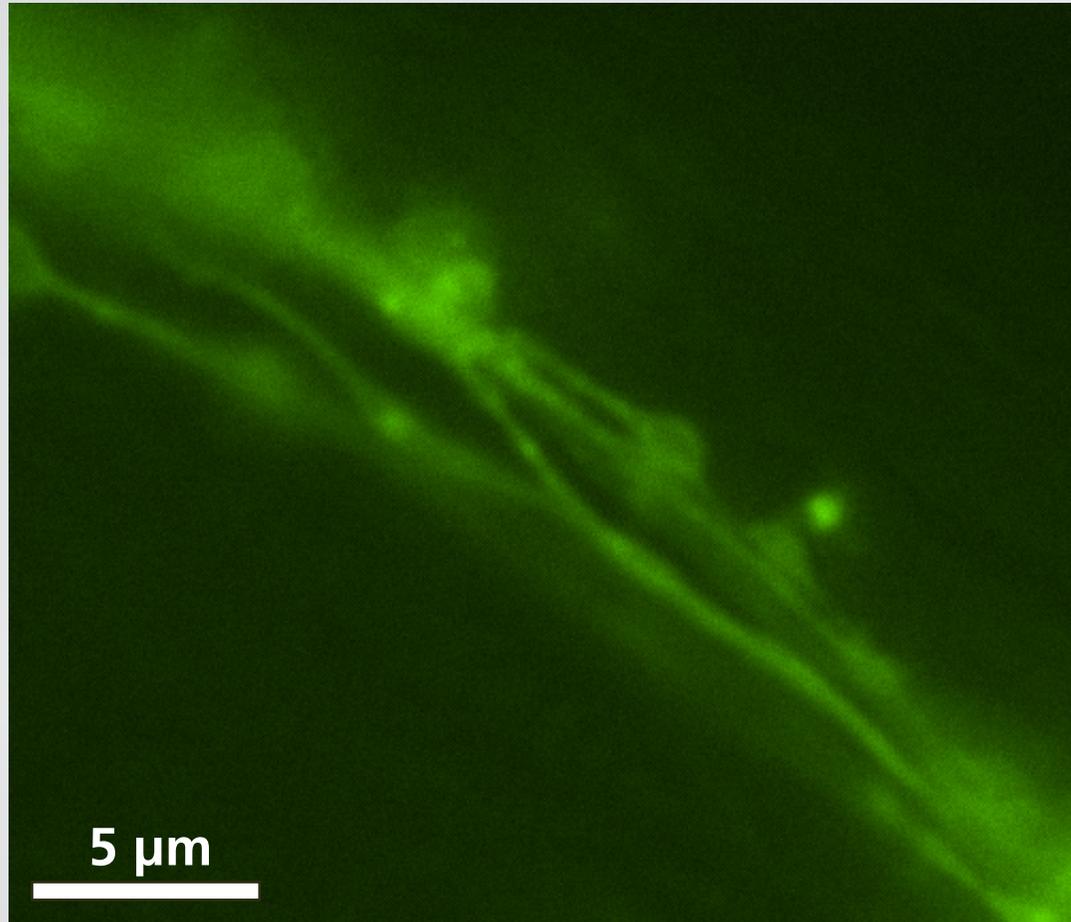

revive worm, reimage 1 day later

Nanoneurosurgery

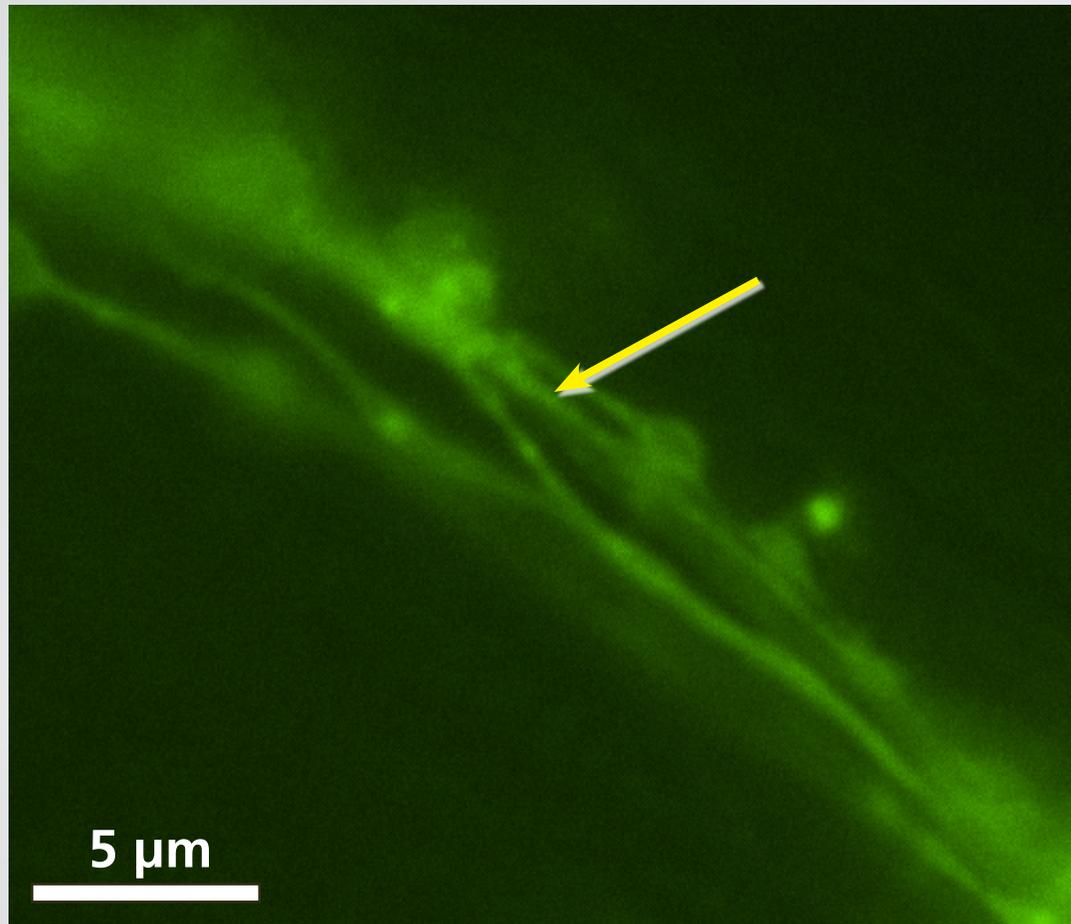

Nanoneurosurgery

cut single dendrite in amphid bundle

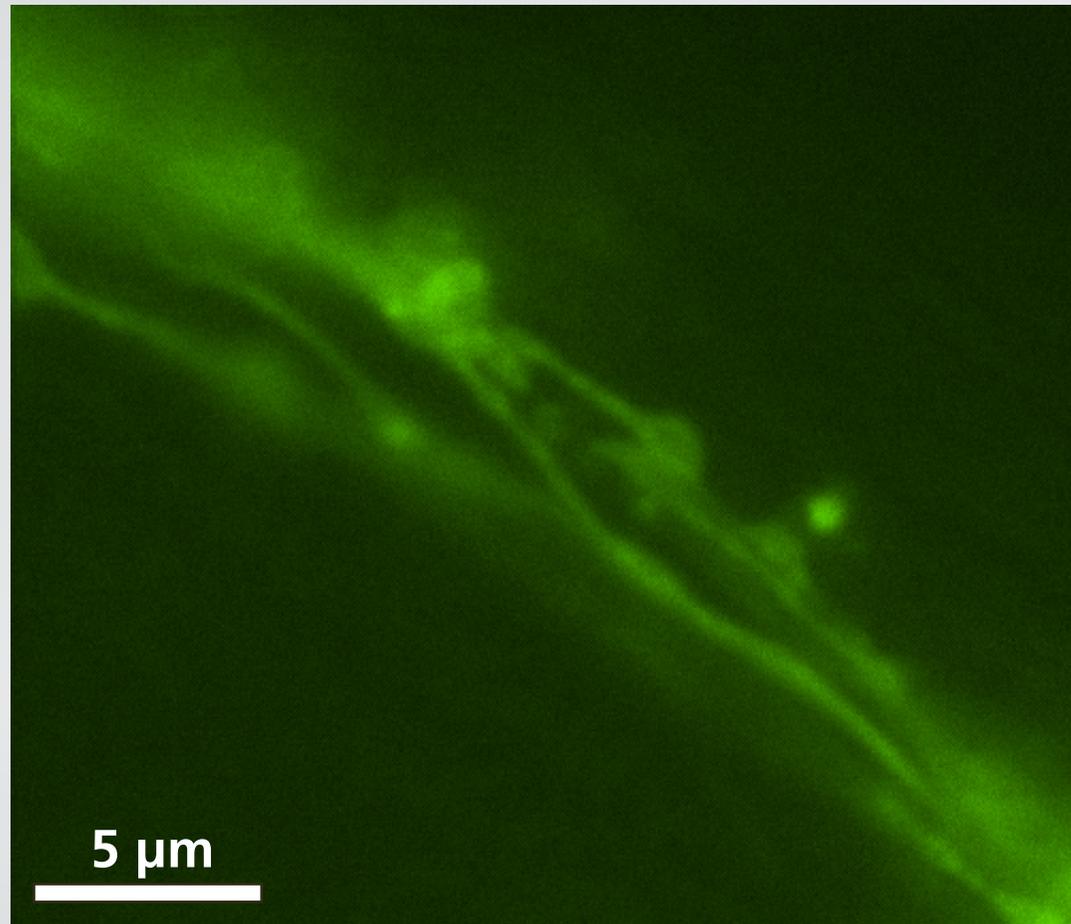

Nanoneurosurgery

cut single dendrite in amphid bundle

Nanoneurosurgery

cut single dendrite in amphid bundle

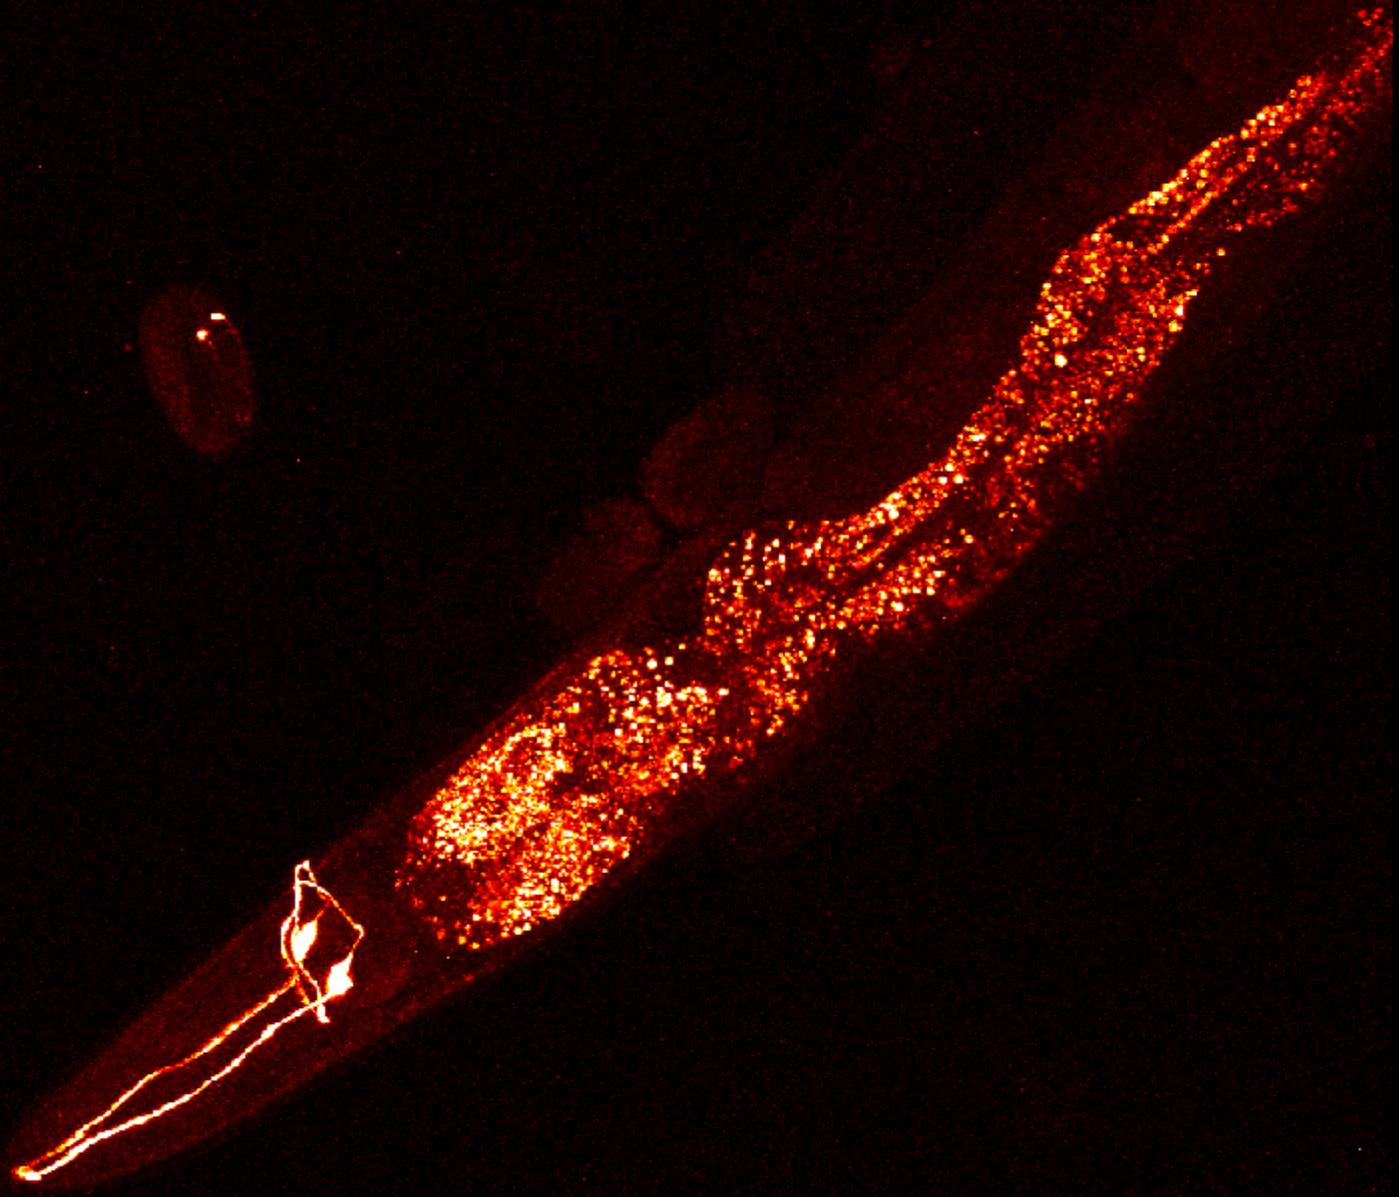

Nanoneurosurgery

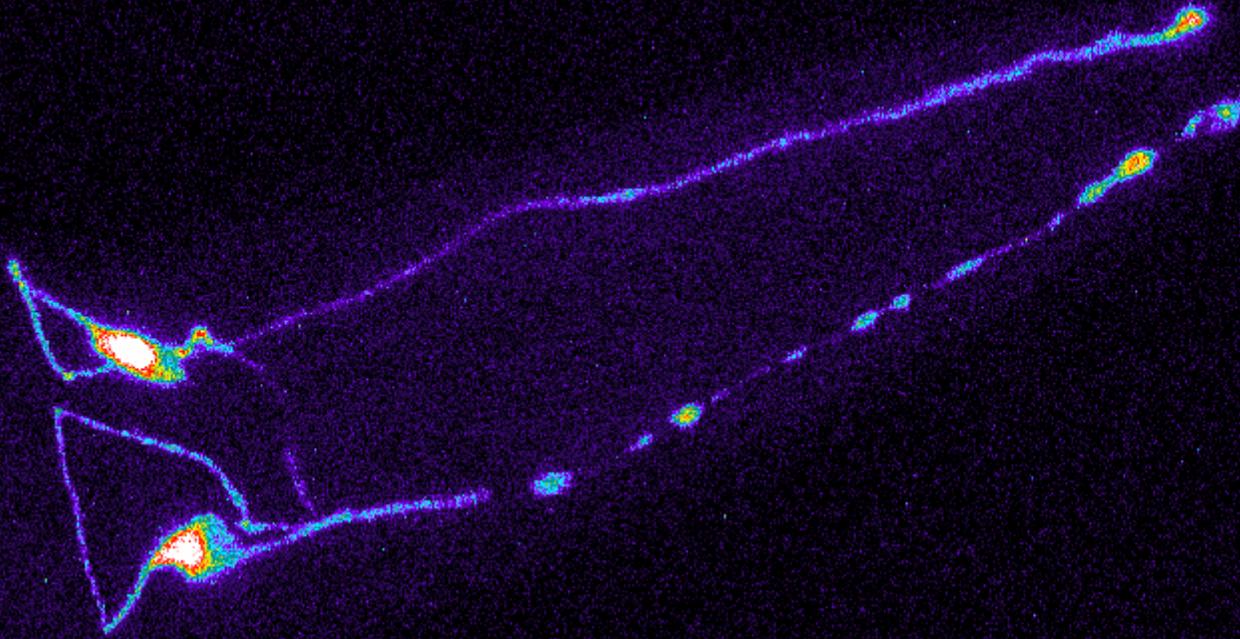

ASD neurons

- responsible for temperature sensing
- ciliary projections
- one on each side

Nanoneurosurgery

Nanoneurosurgery

Nanoneurosurgery

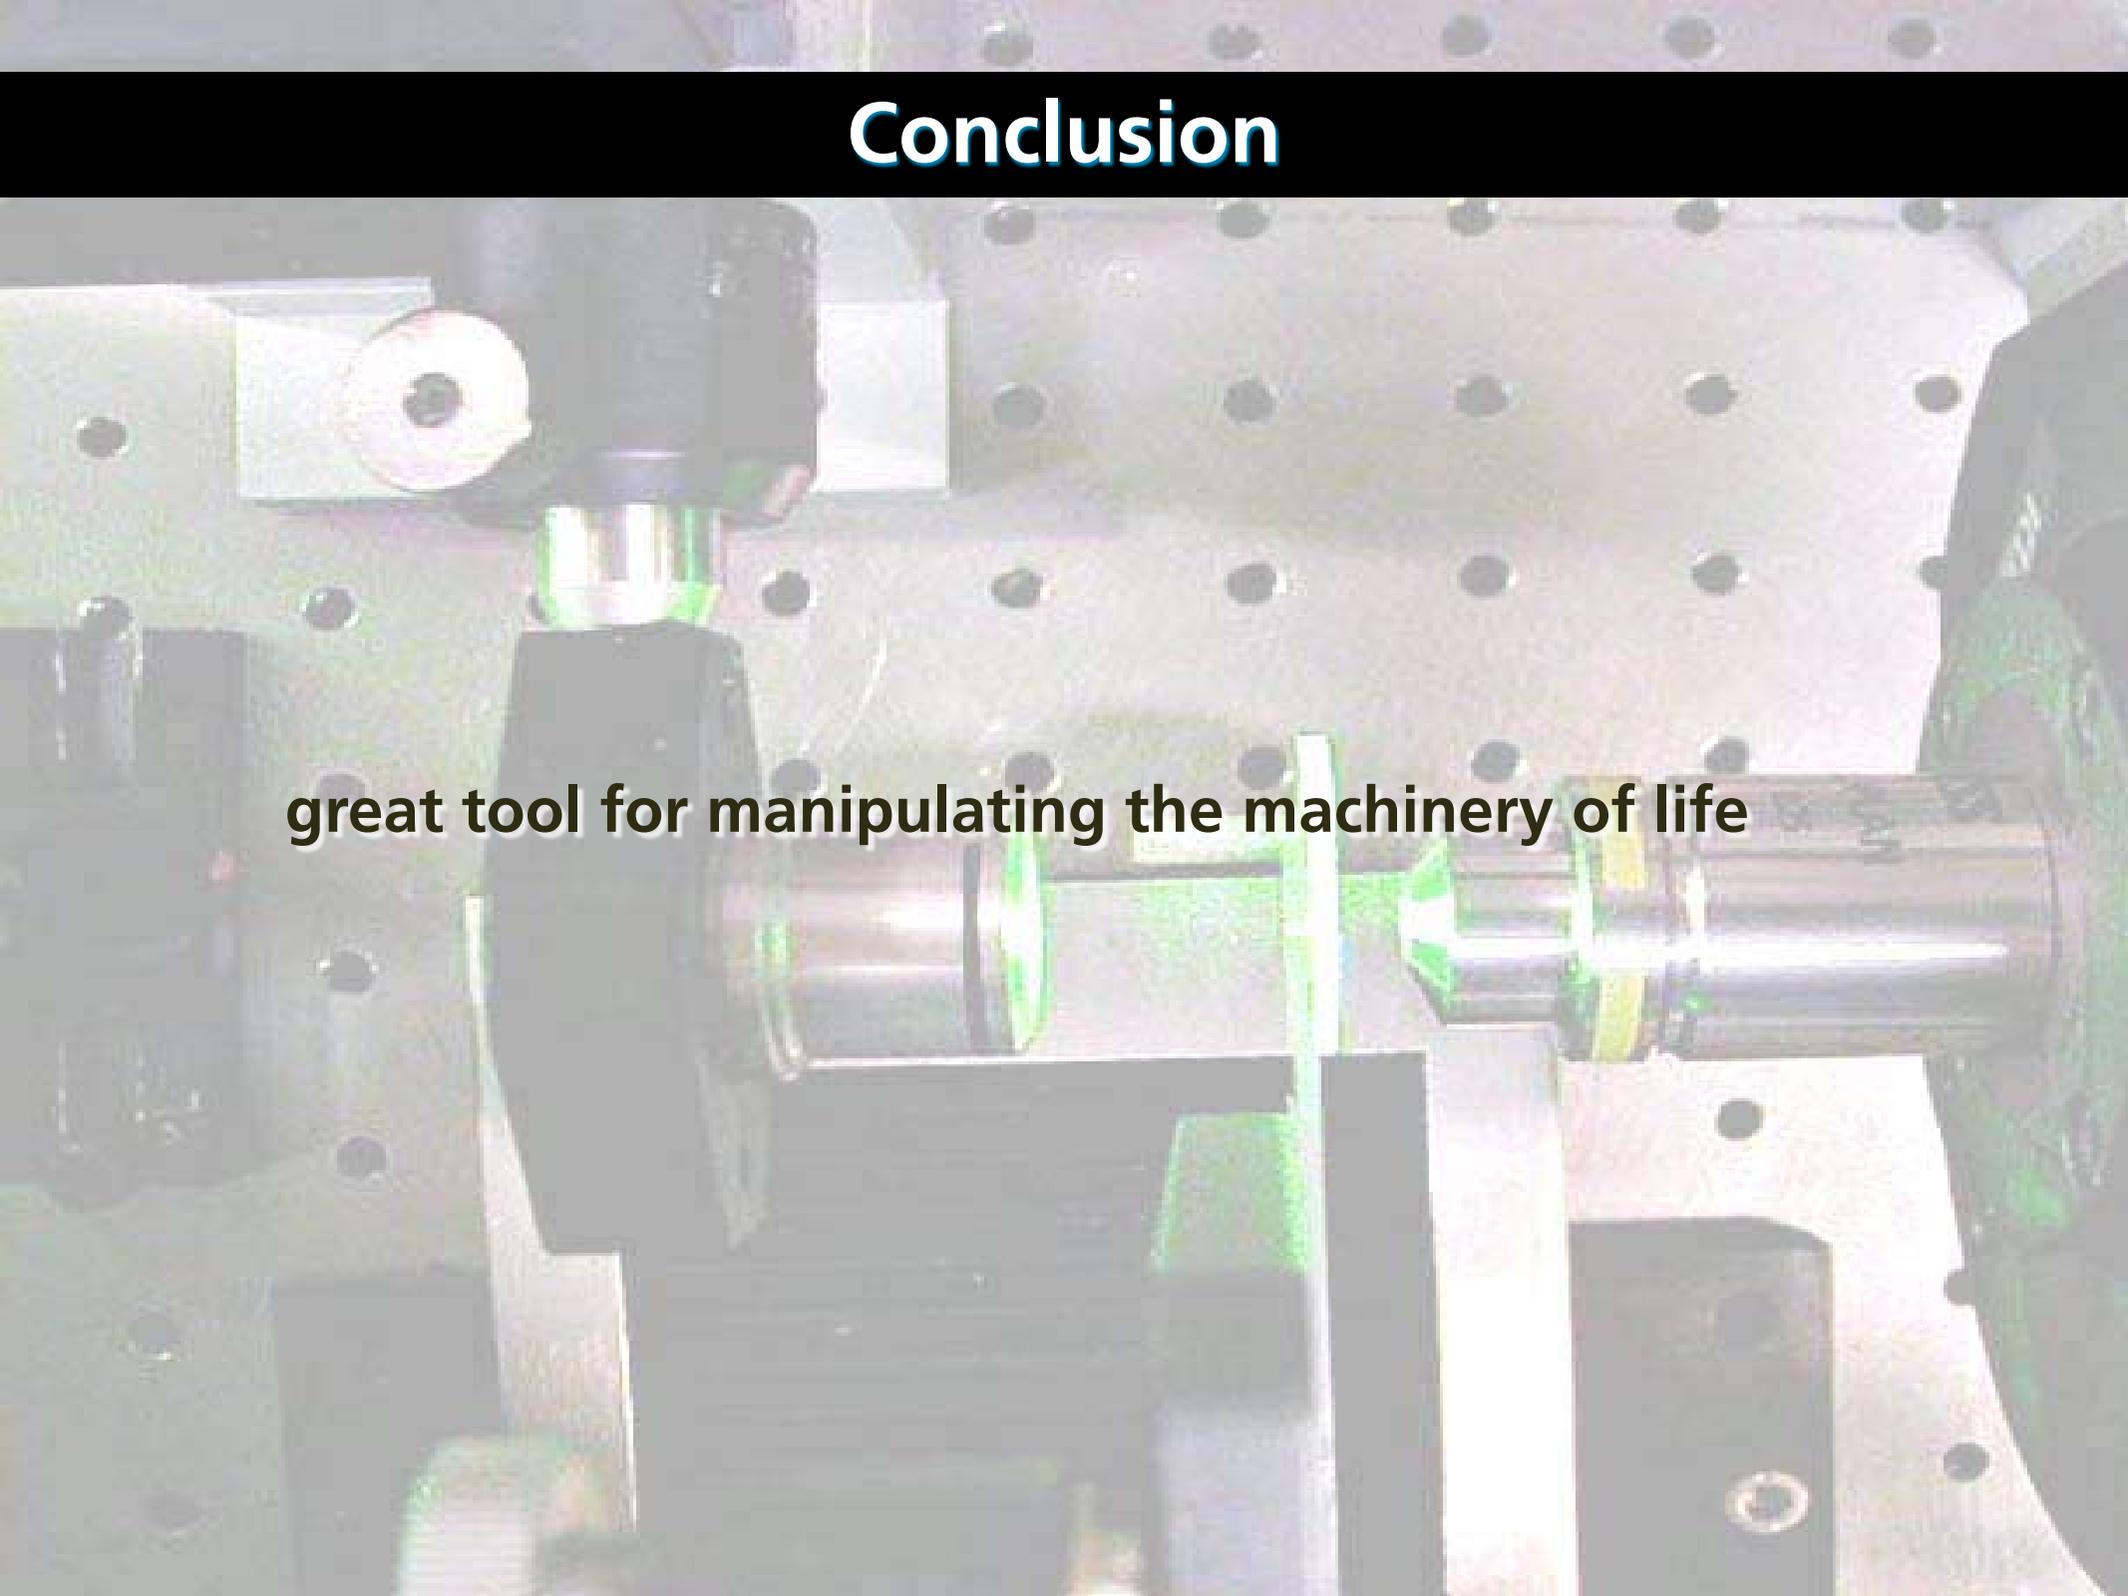

temperature sensing occurs at tip of dendrite

Summary

- **manipulate on subcellular, submicrometer scale**
- **penetrate in bulk without compromising viability**
- **study cell structure and mechanics**
- **study neurobiological basis of behavior**

Conclusion

great tool for manipulating the machinery of life

A close-up photograph of a mechanical assembly, likely a microscope or a similar precision instrument. The image shows various metal components, including a large cylindrical part on the right, a smaller cylindrical part in the center, and a perforated metal plate in the background. The lighting is somewhat dim, and the overall appearance is that of a complex, precision-engineered device.
