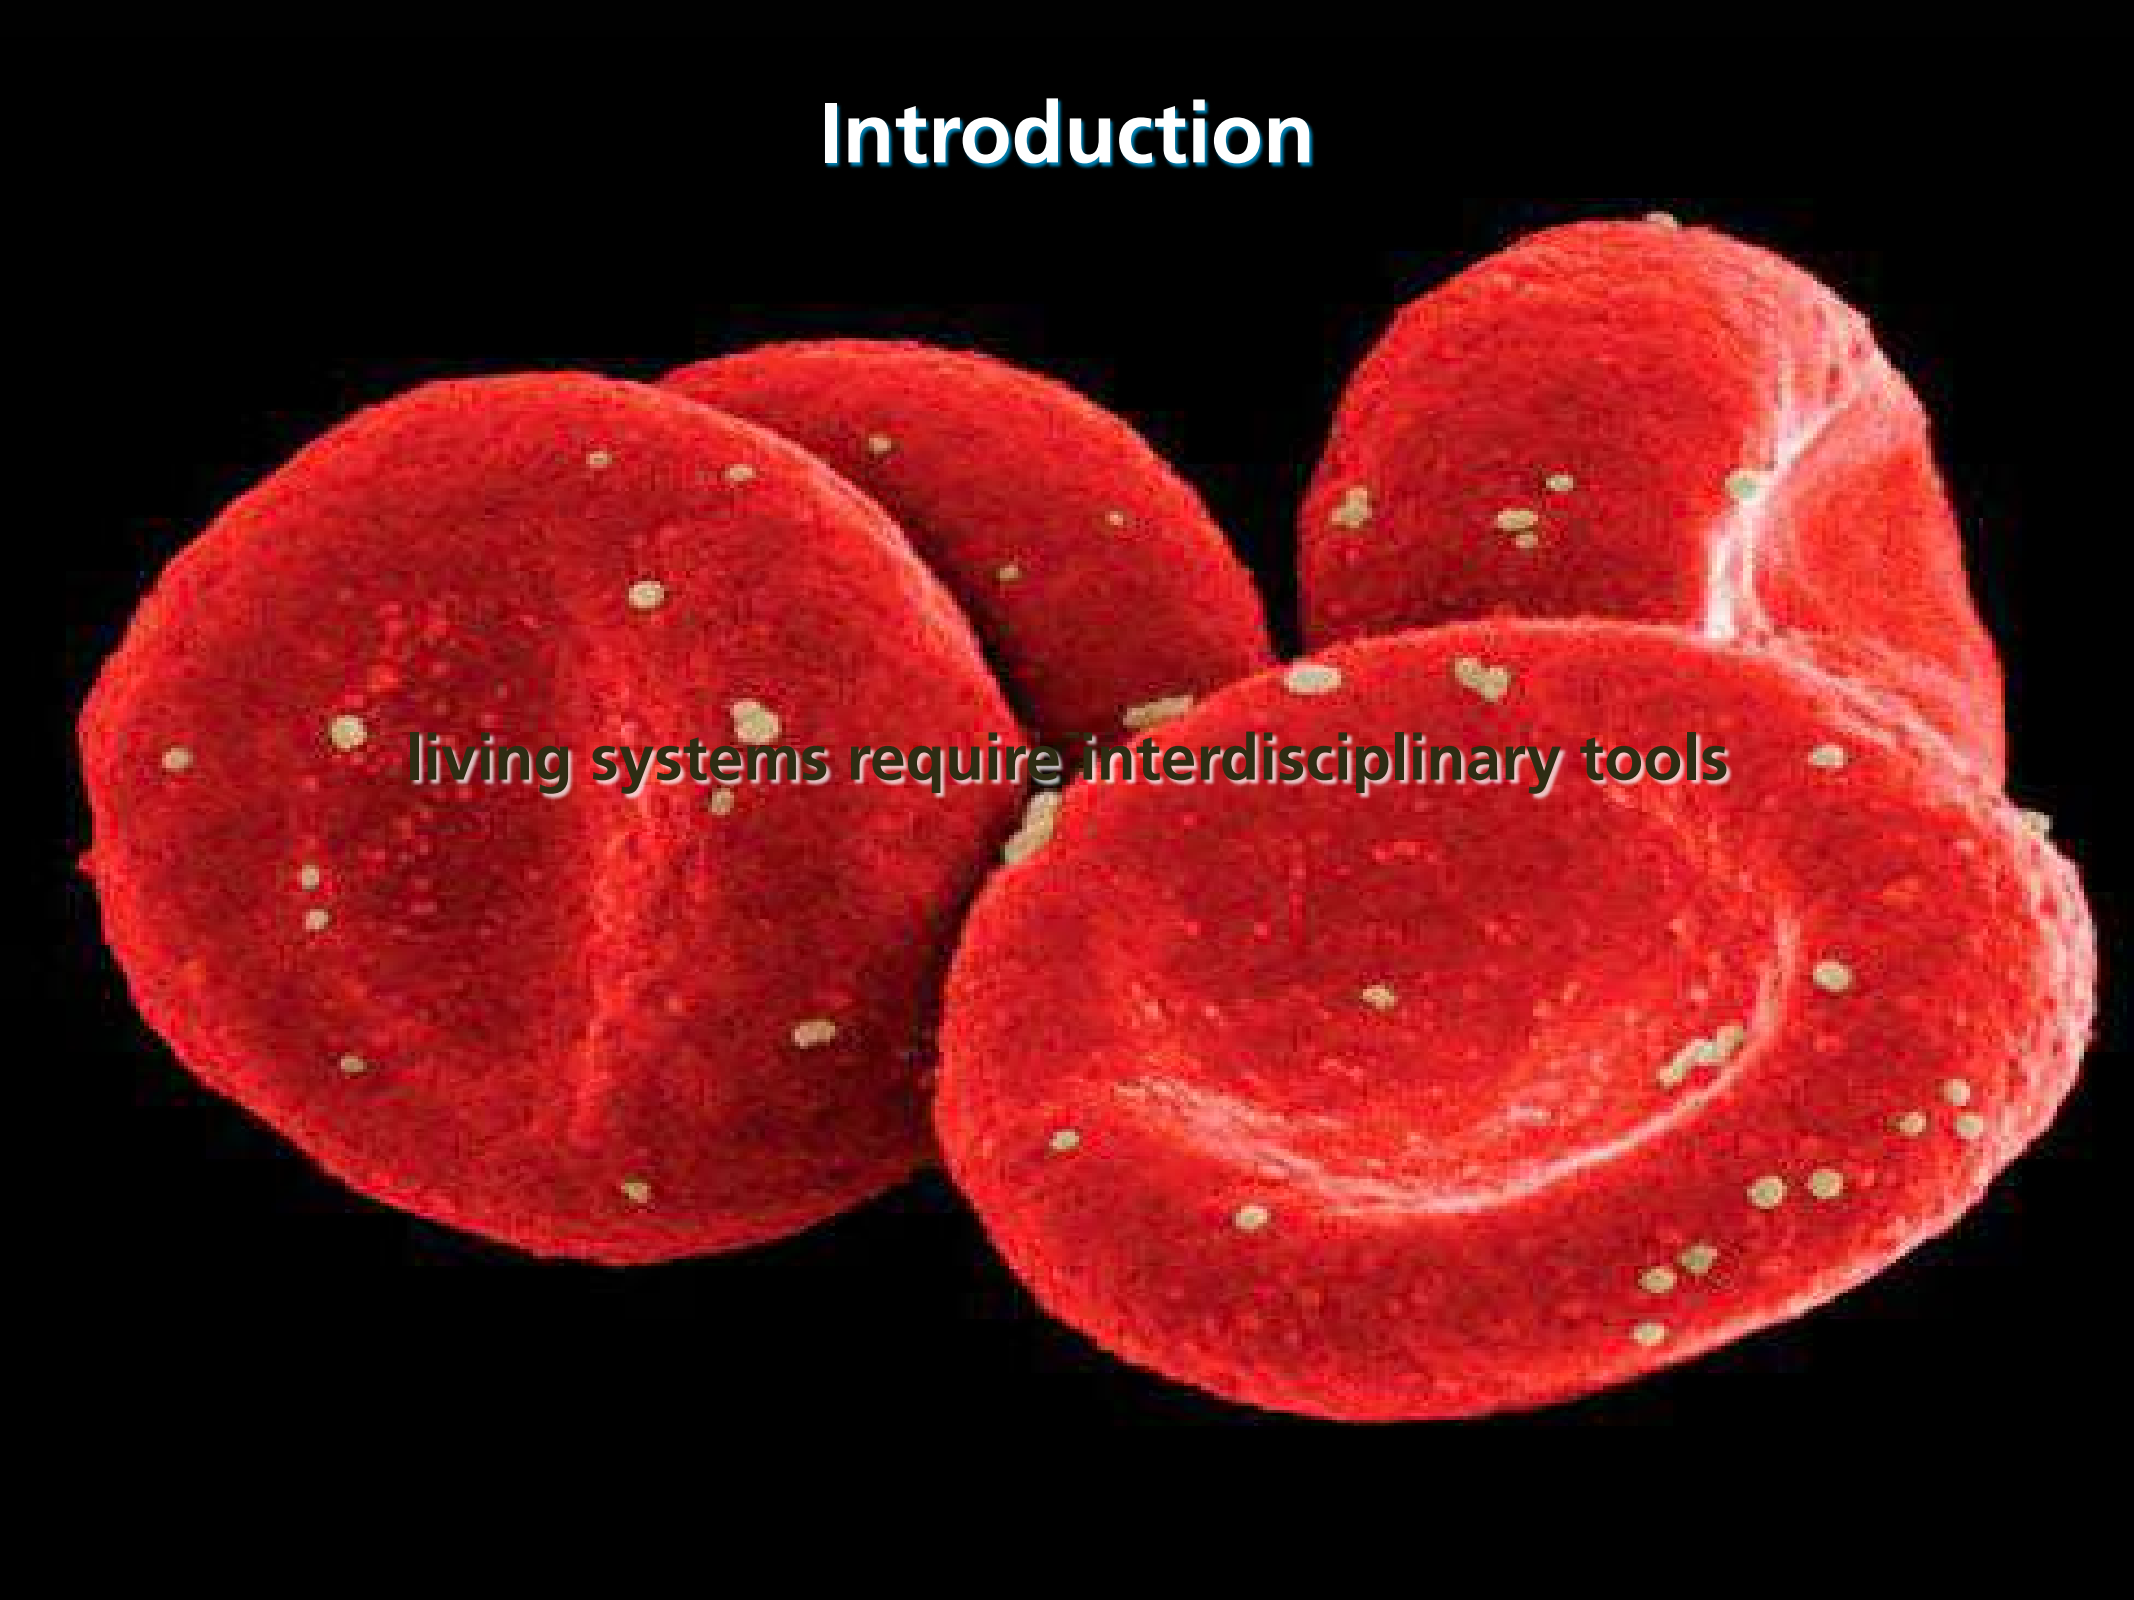
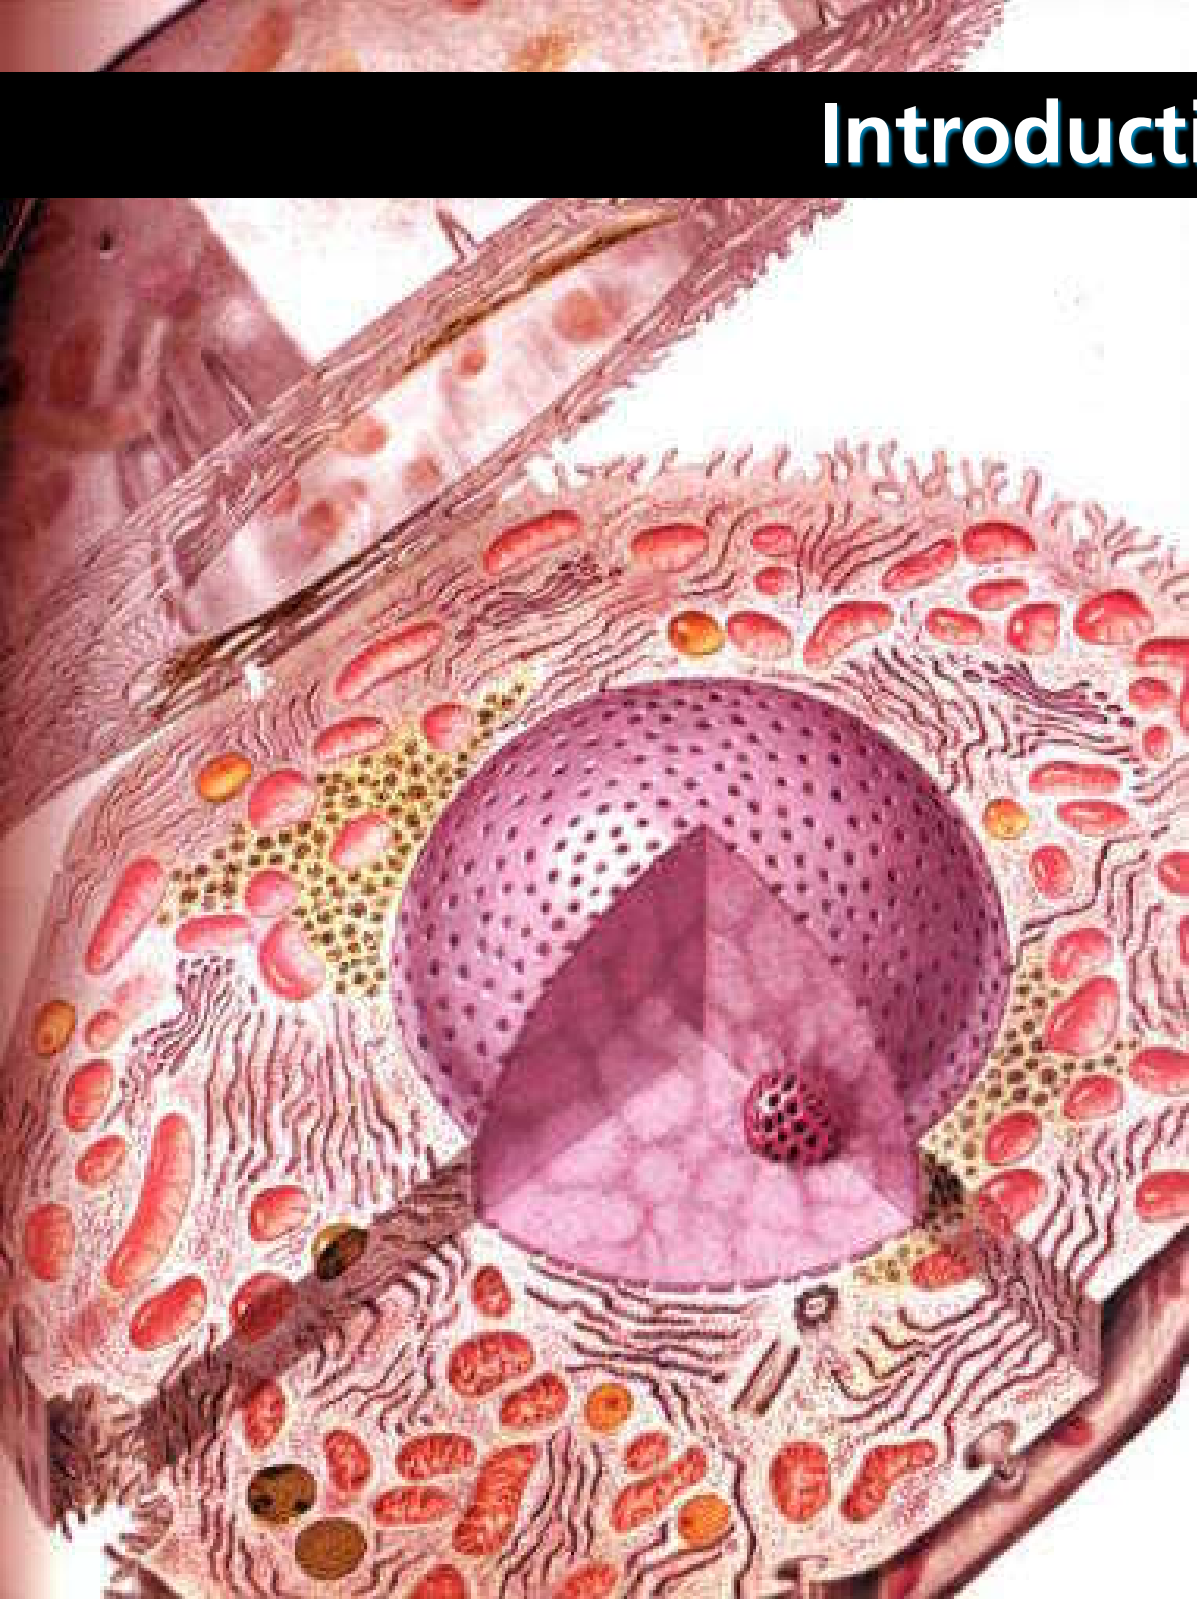
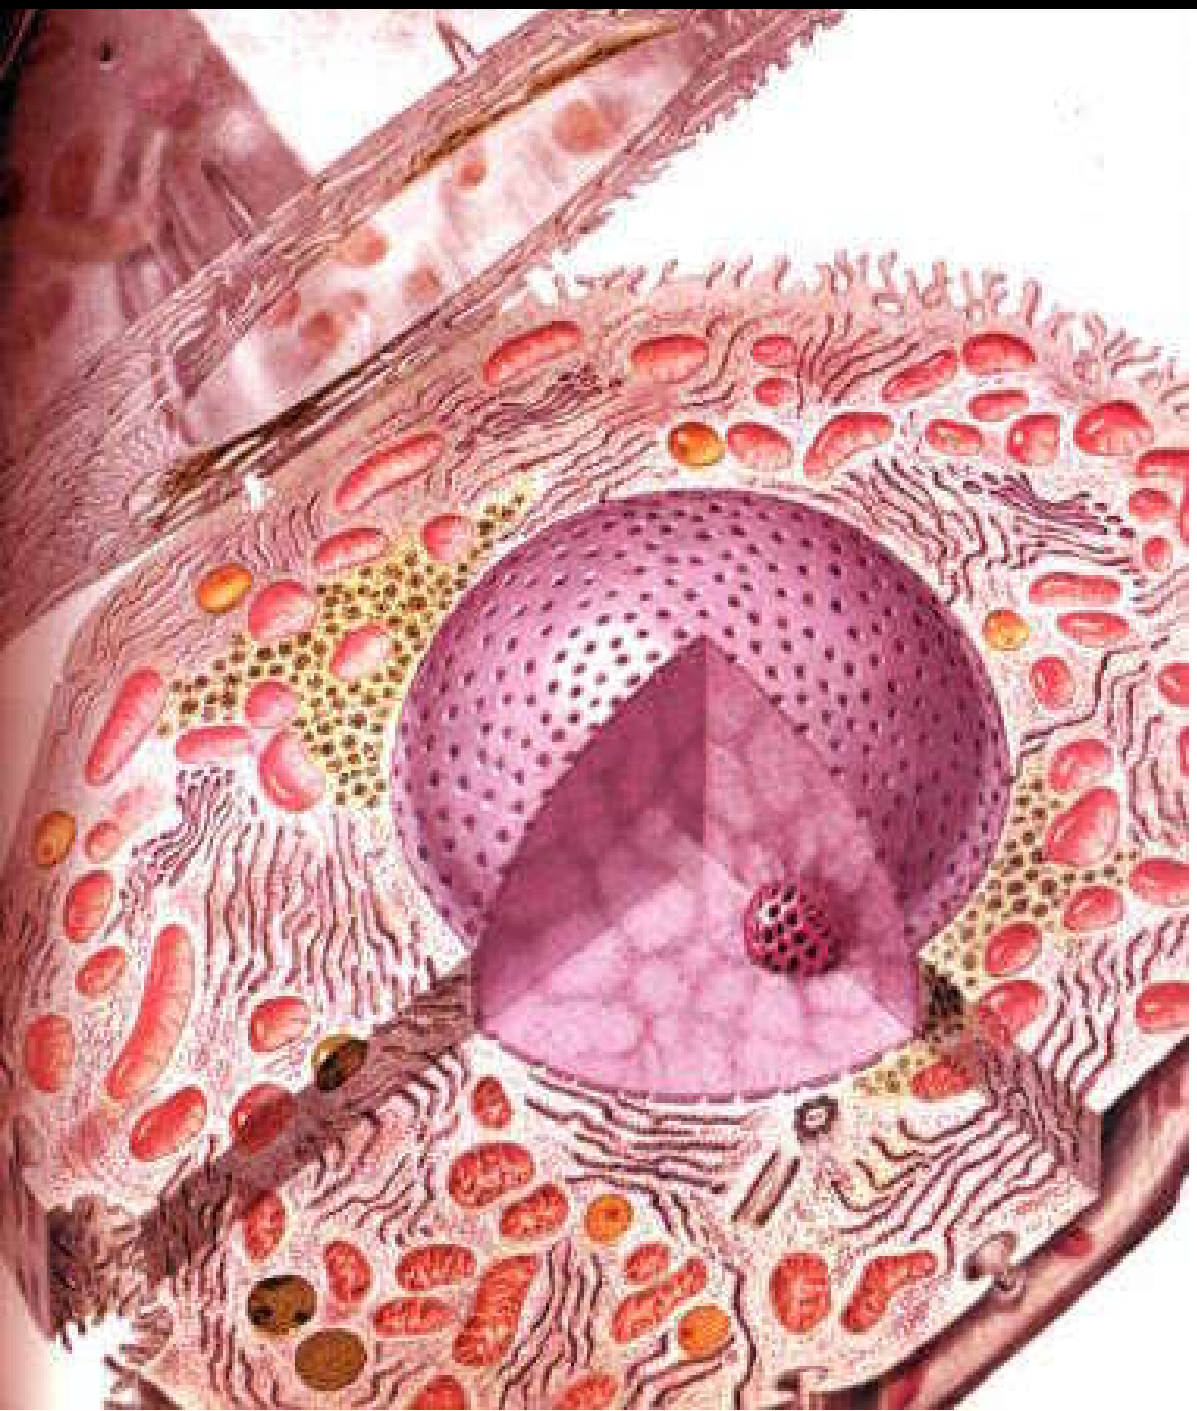
Introduction

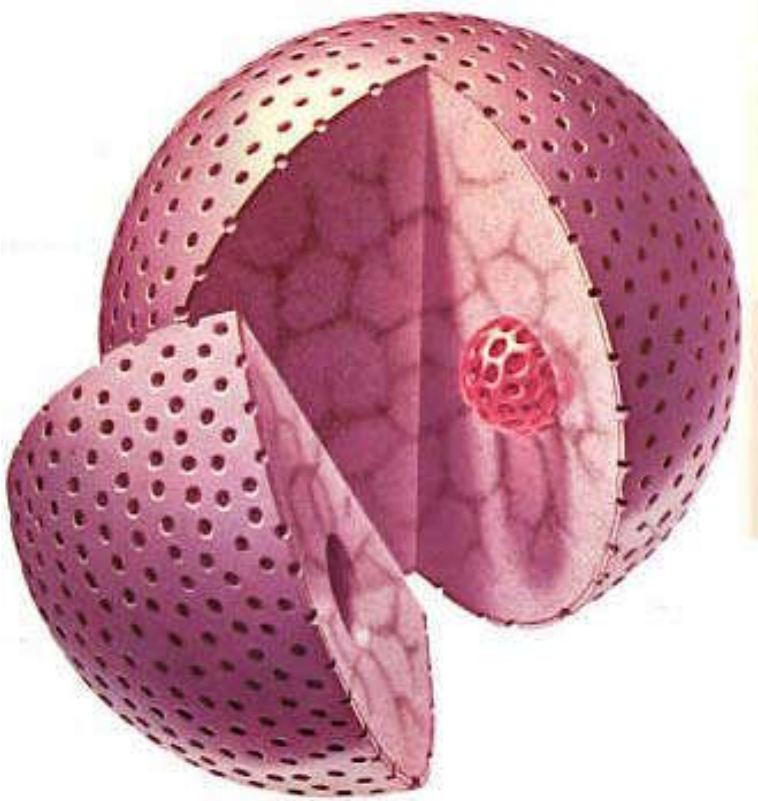


Introduction

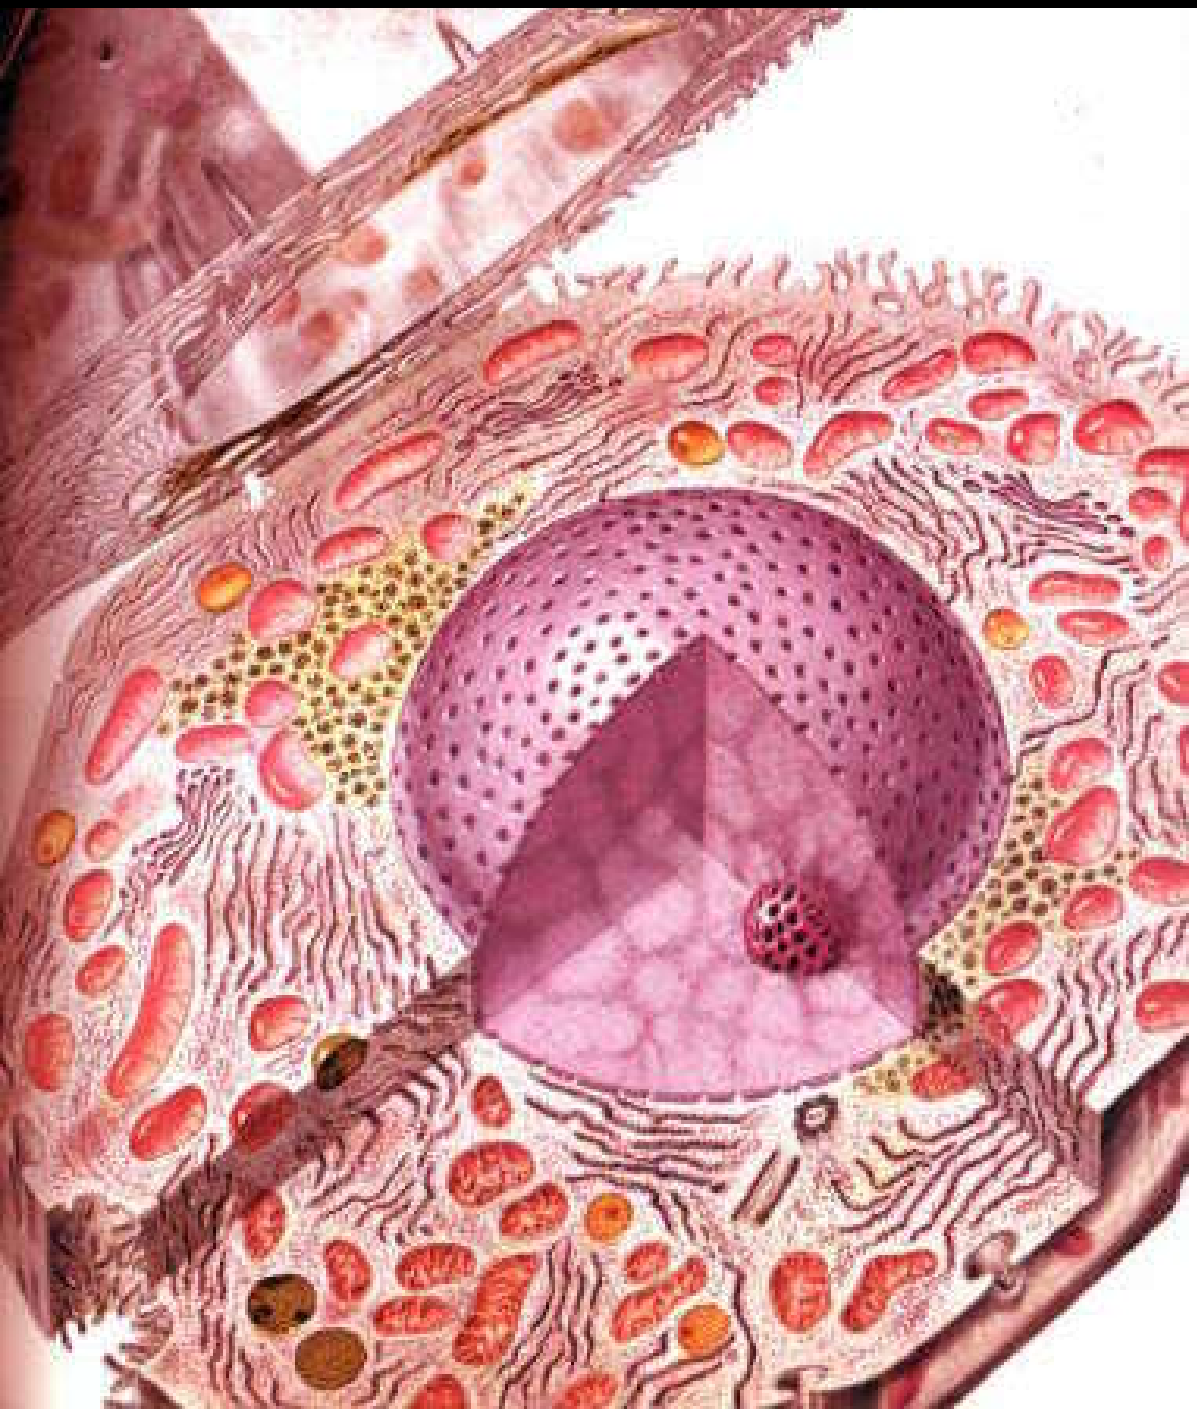


Introduction

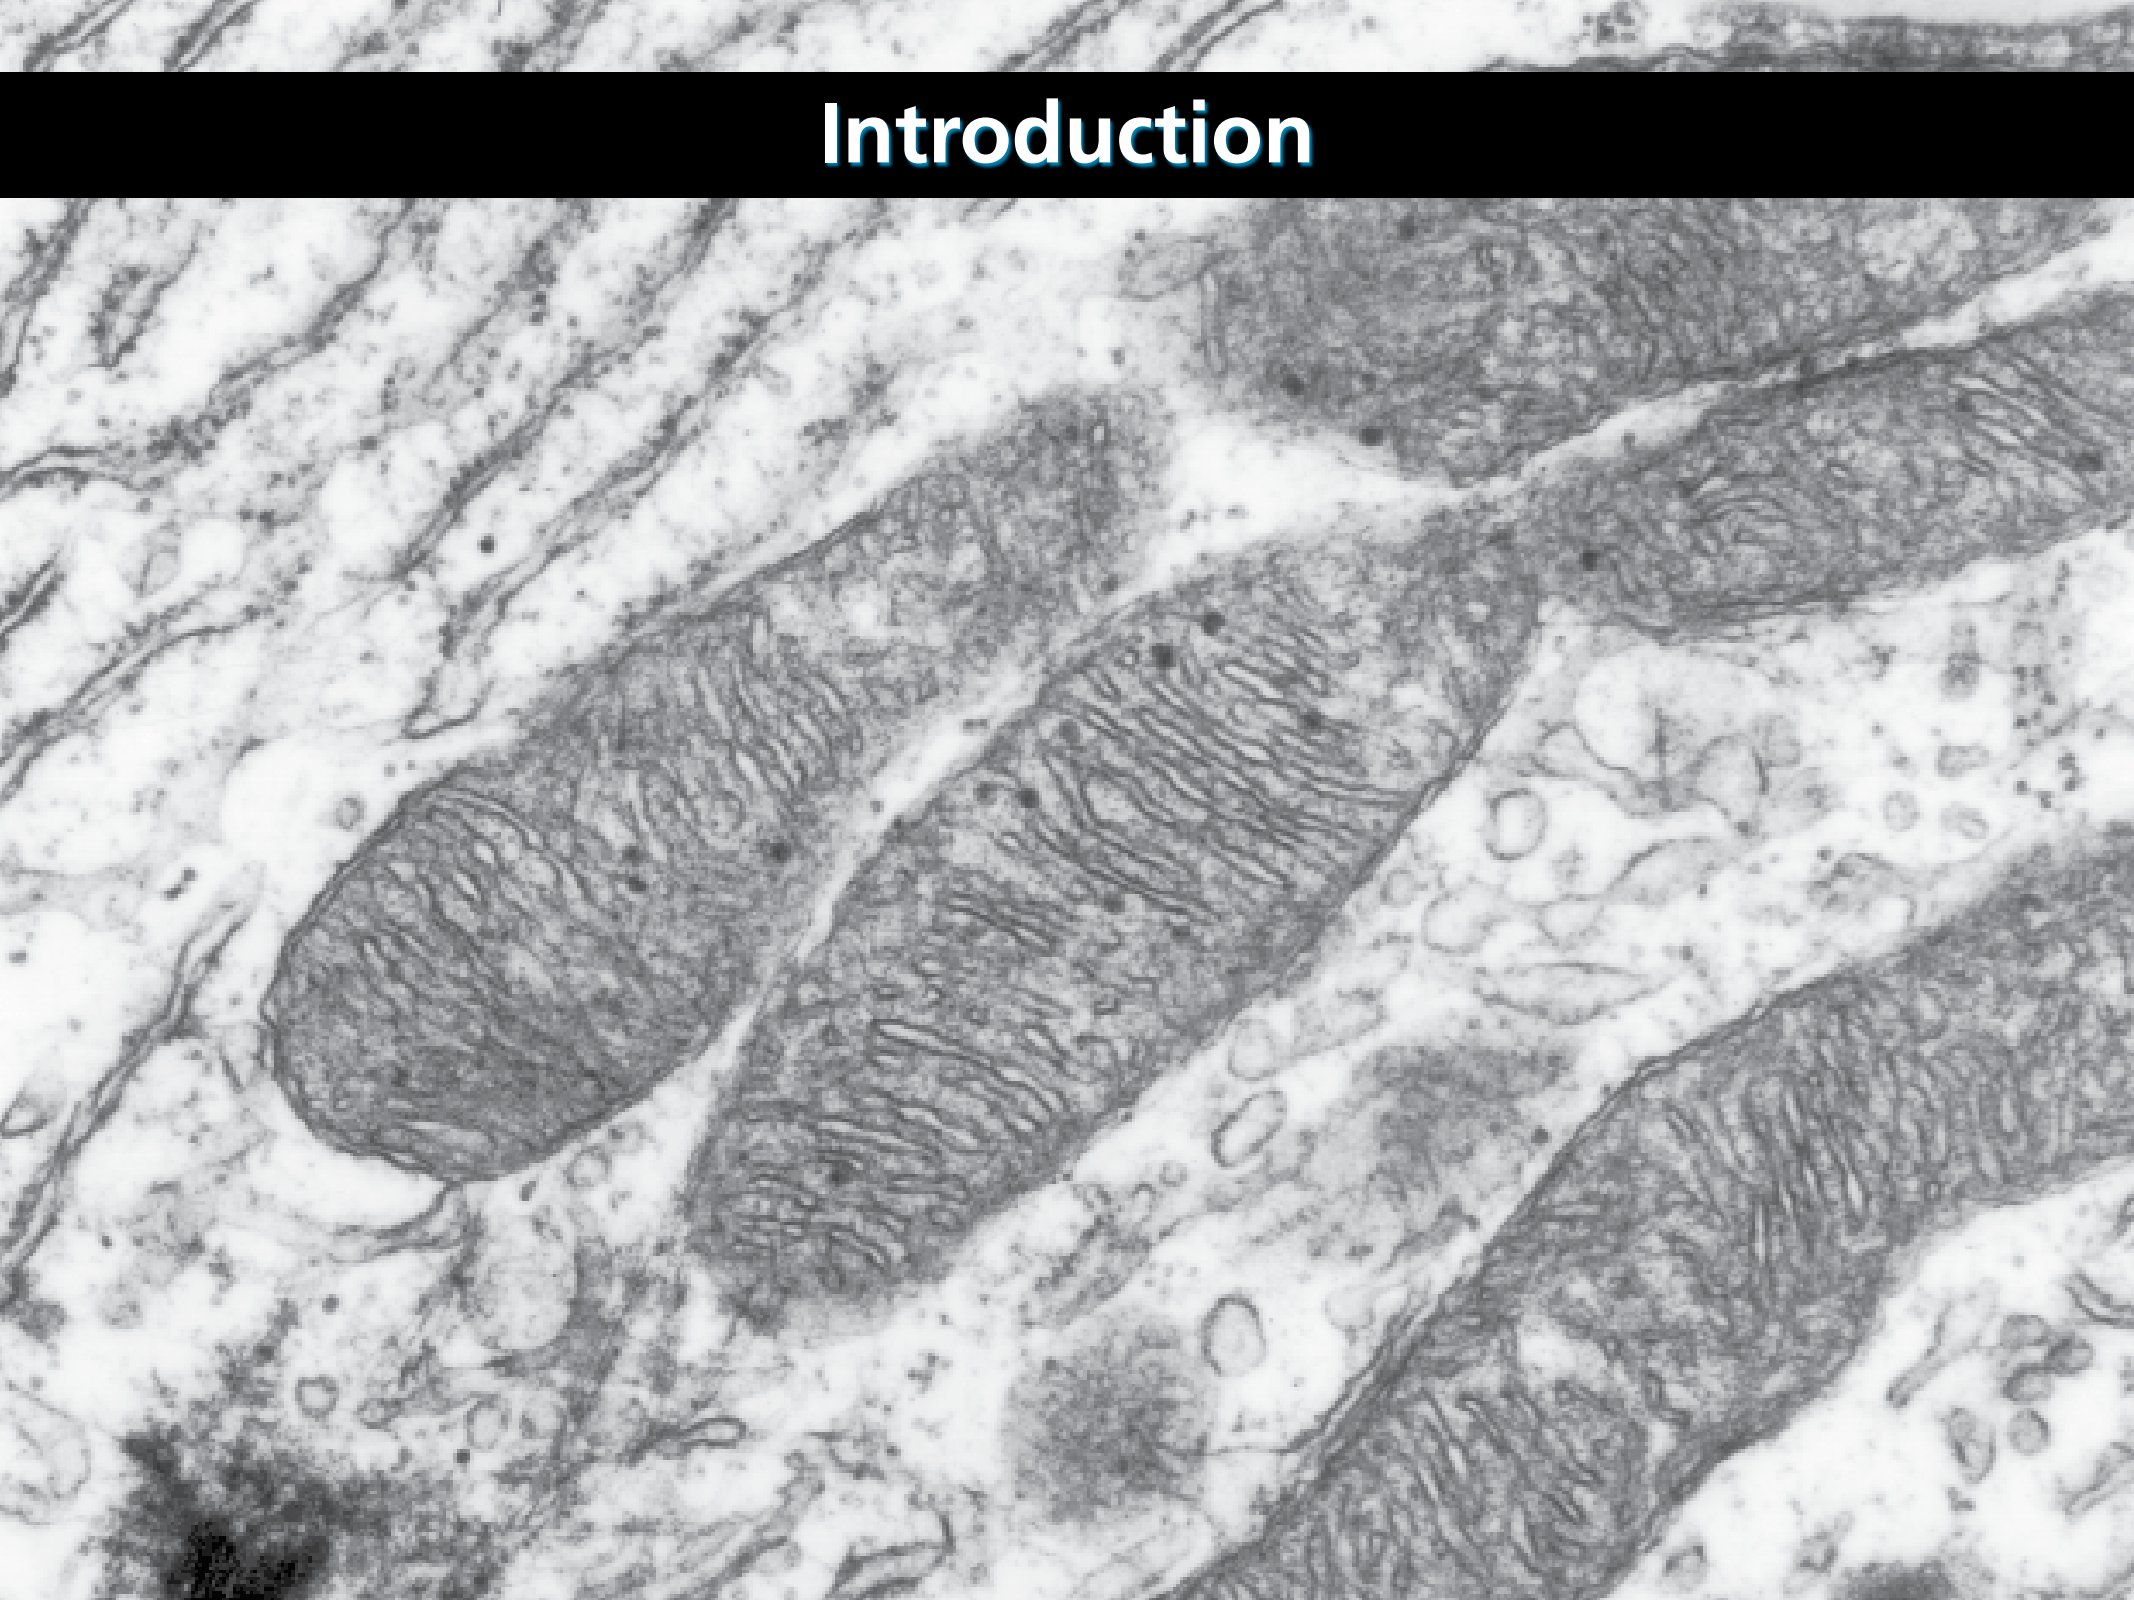




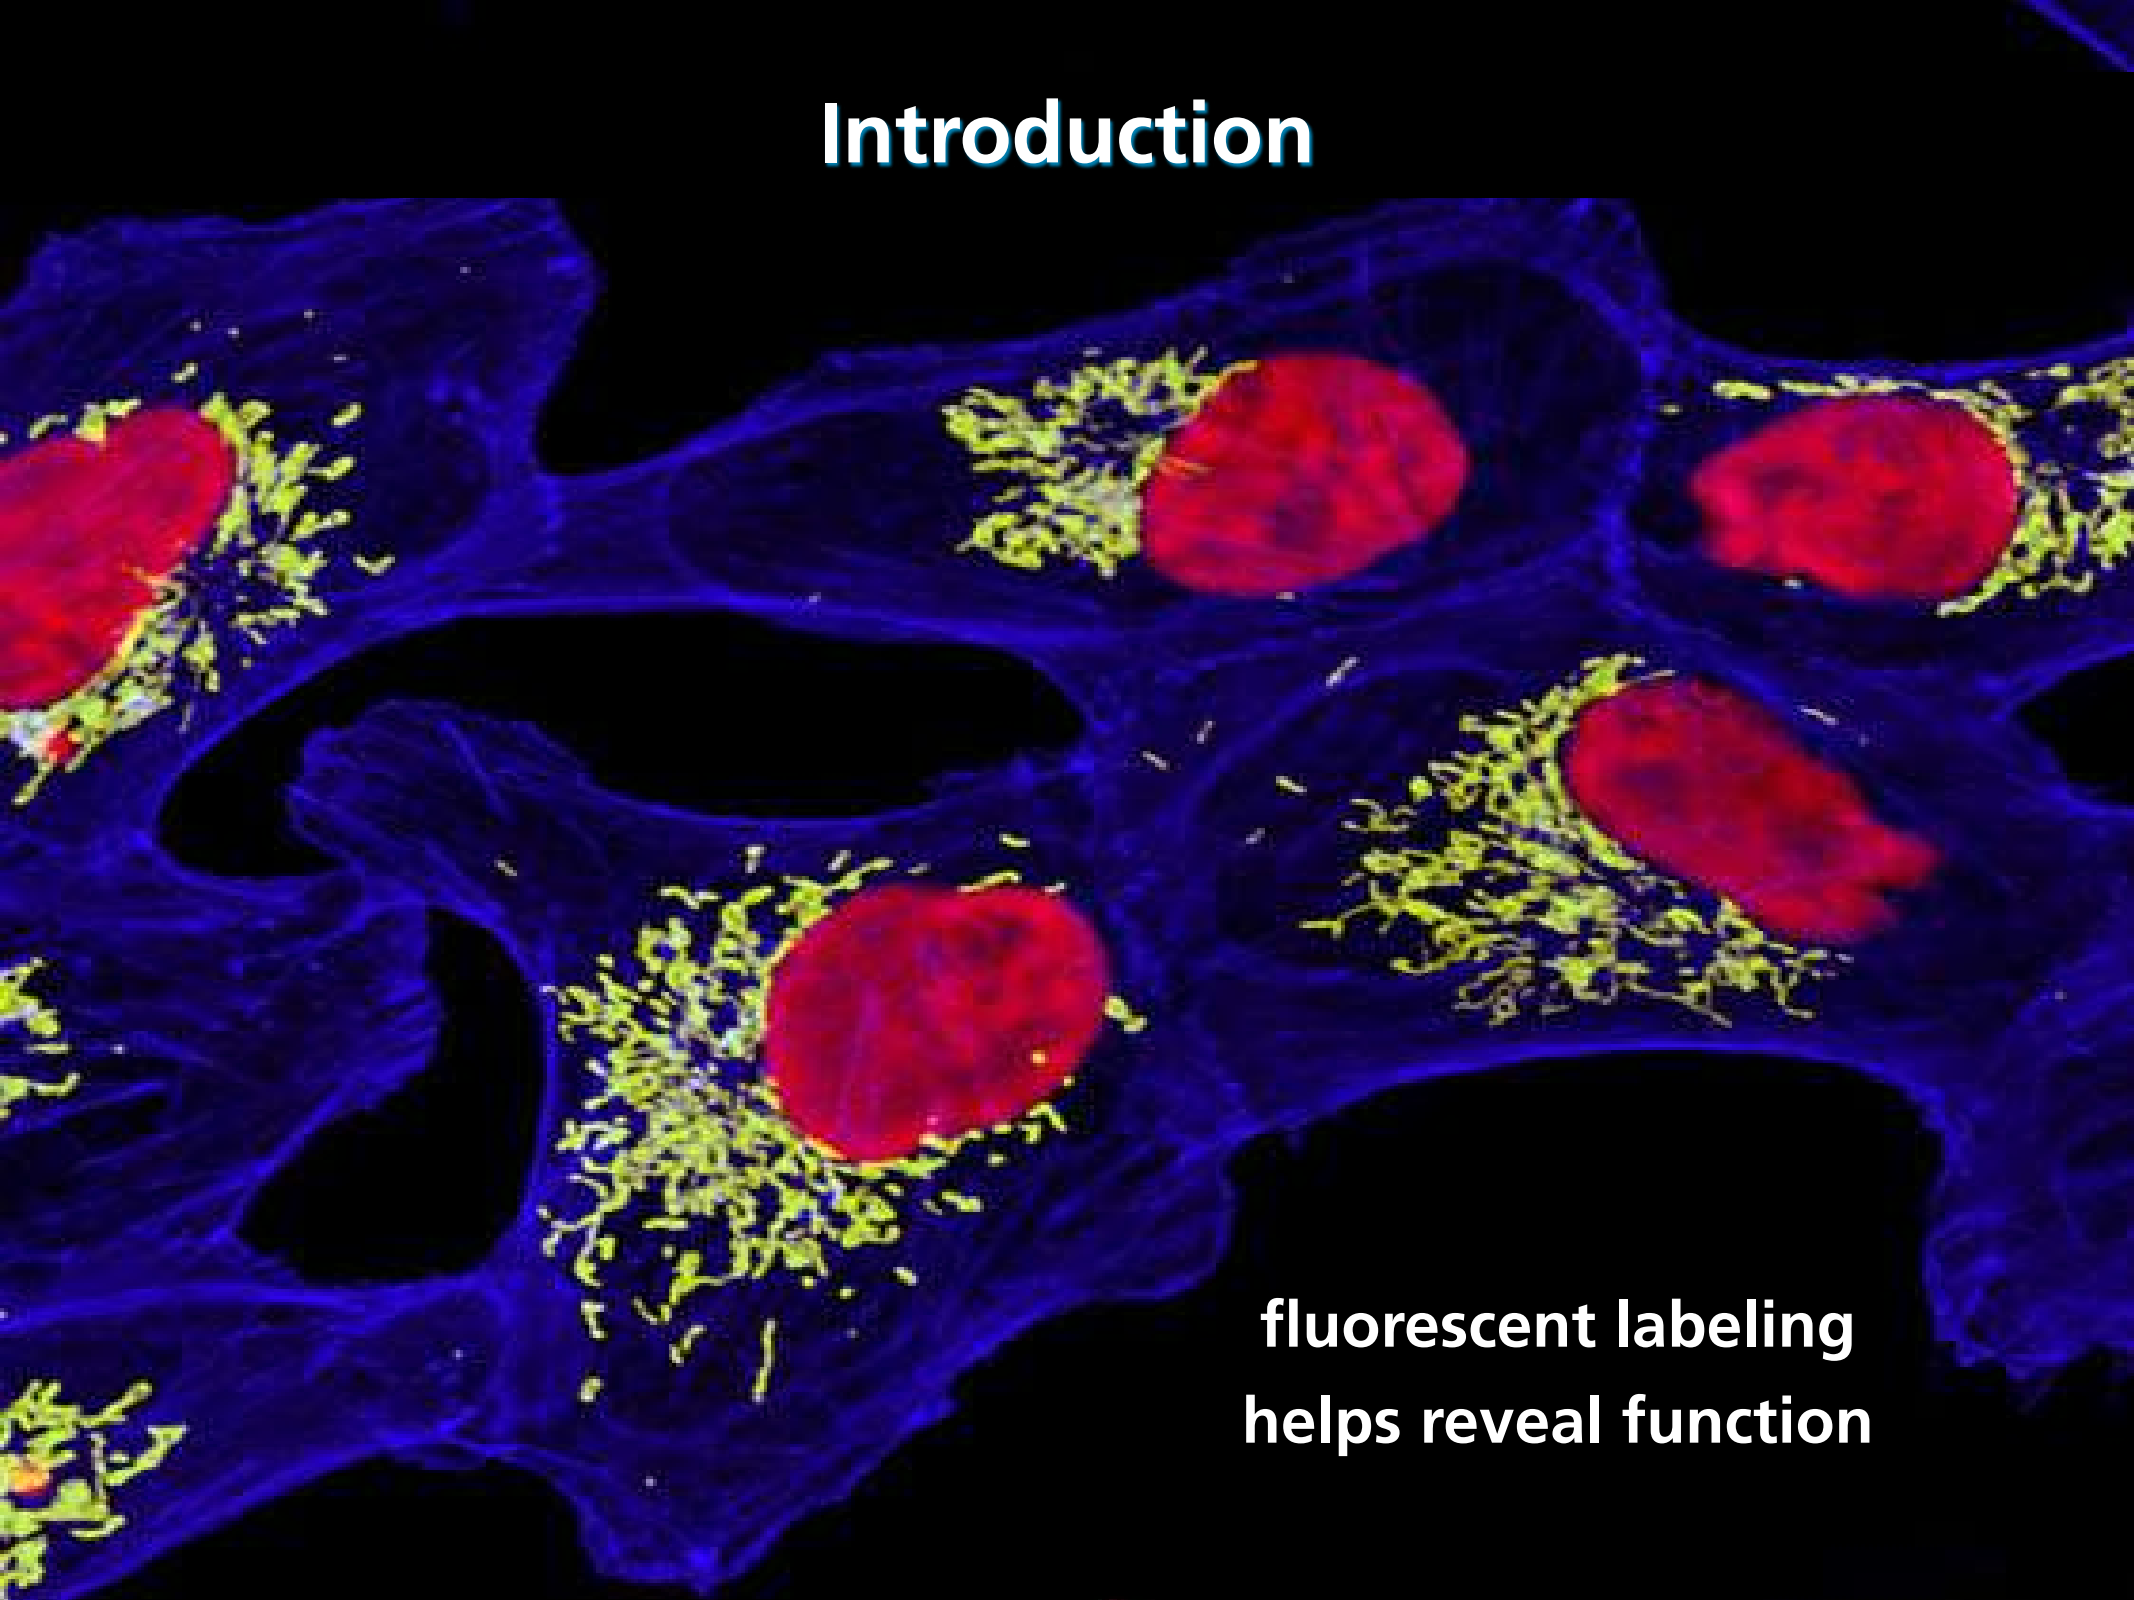
Introduction



Introduction

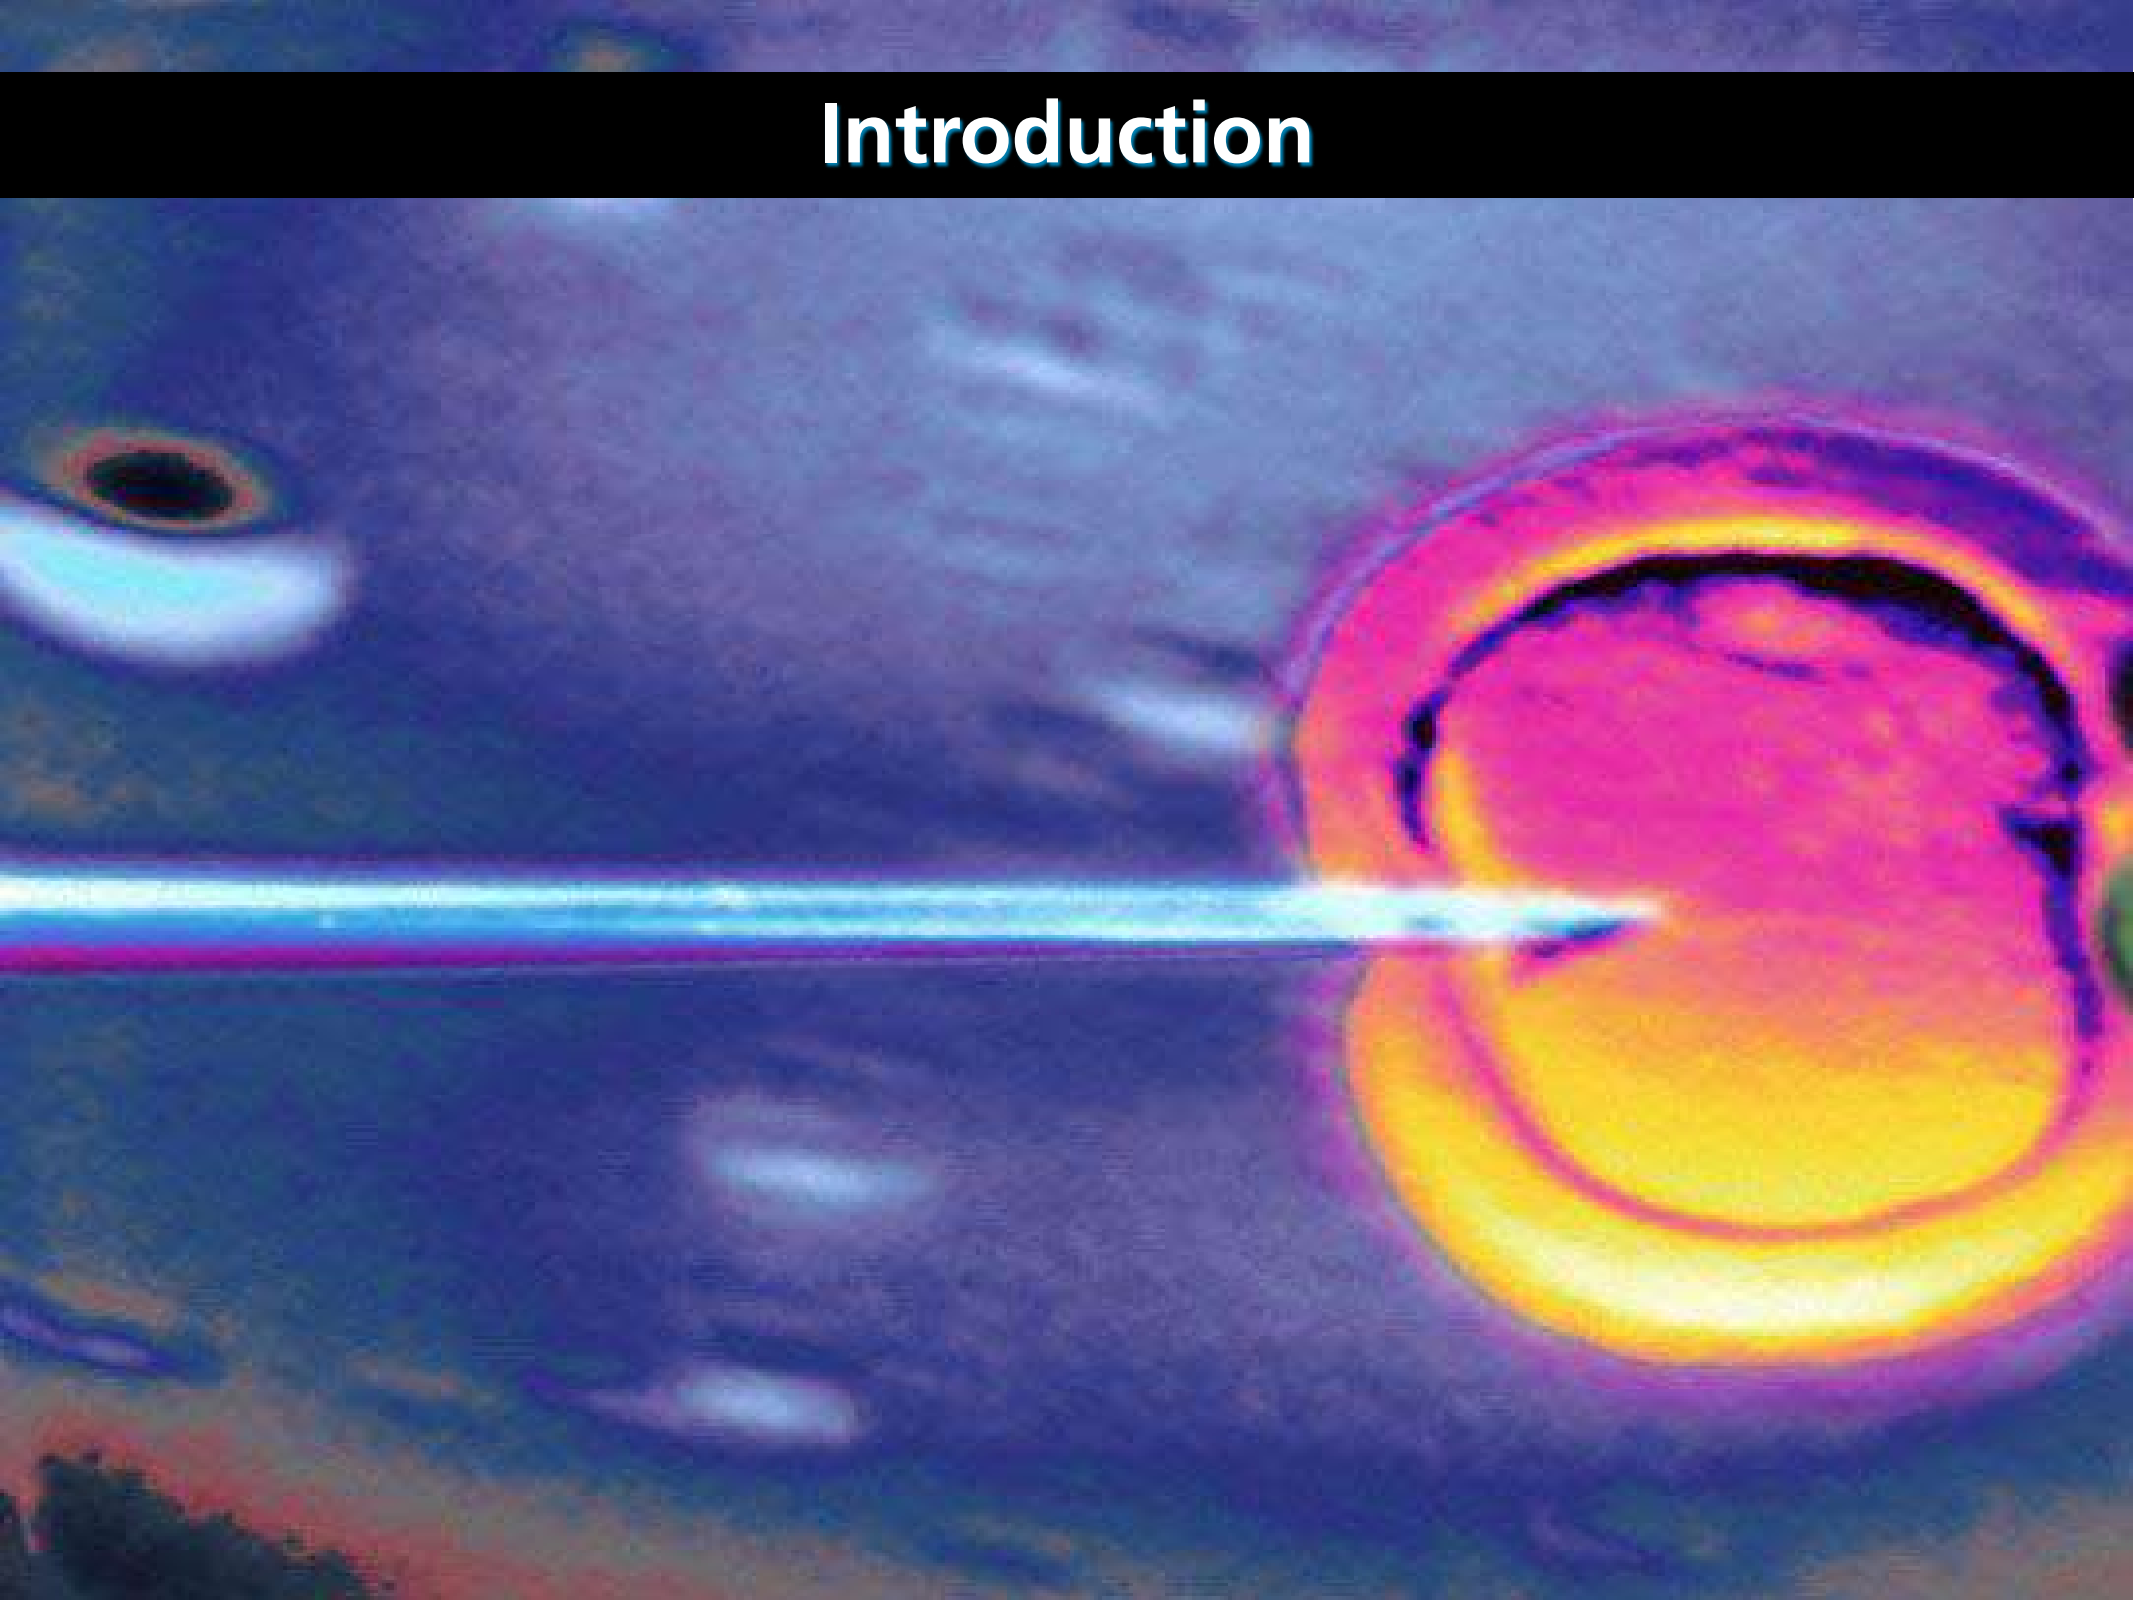


Introduction



fluorescent labeling
helps reveal function

Introduction



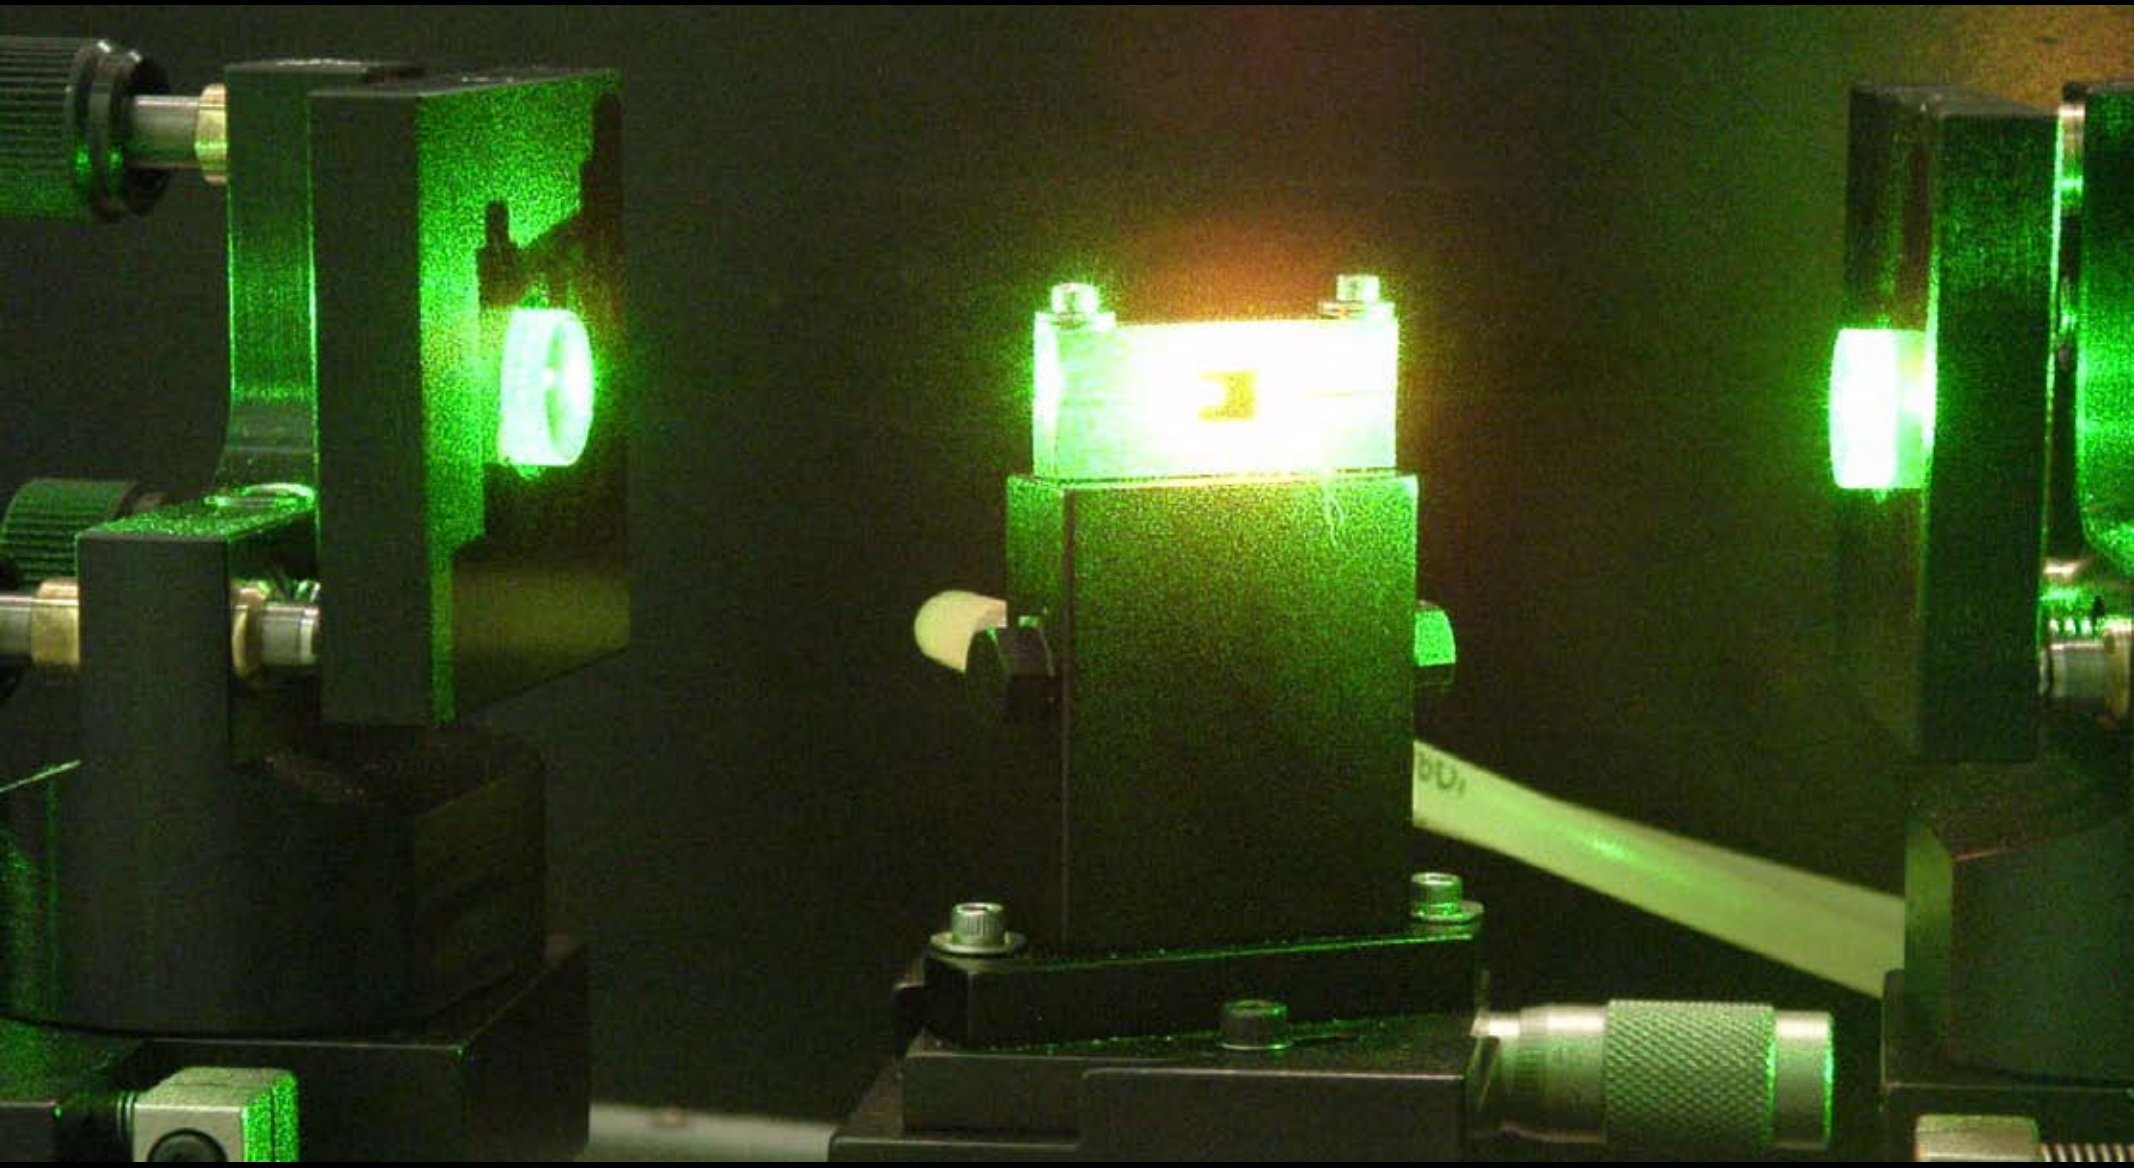
Introduction

- standard biochemical tools: species selective
- fs ‘nanosurgery’: site-specific

Outline

- femtosecond micromachining
- subcellular surgery
- nanoneurosurgery

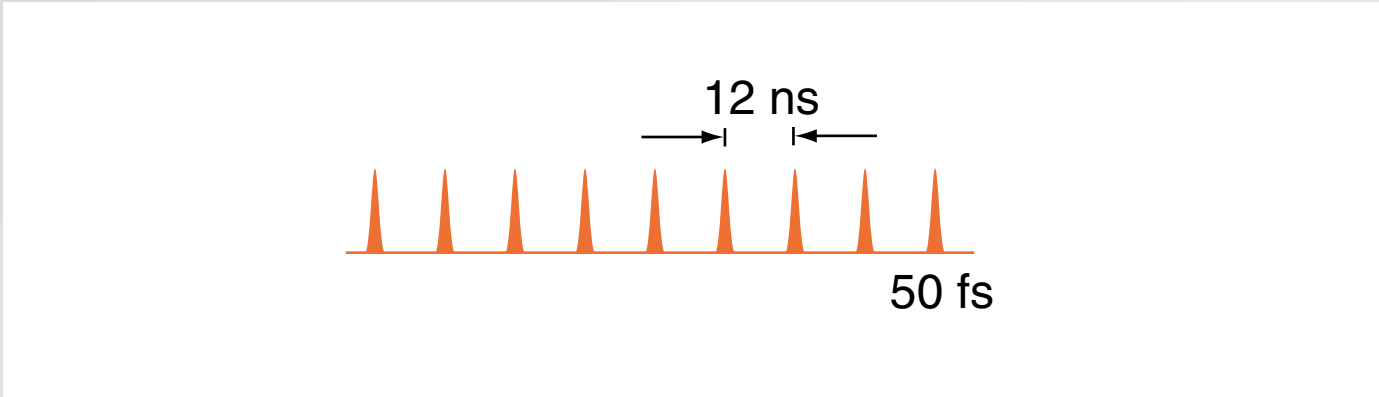
Femtosecond micromachining



Ti: sapphire laser

Femtosecond micromachining

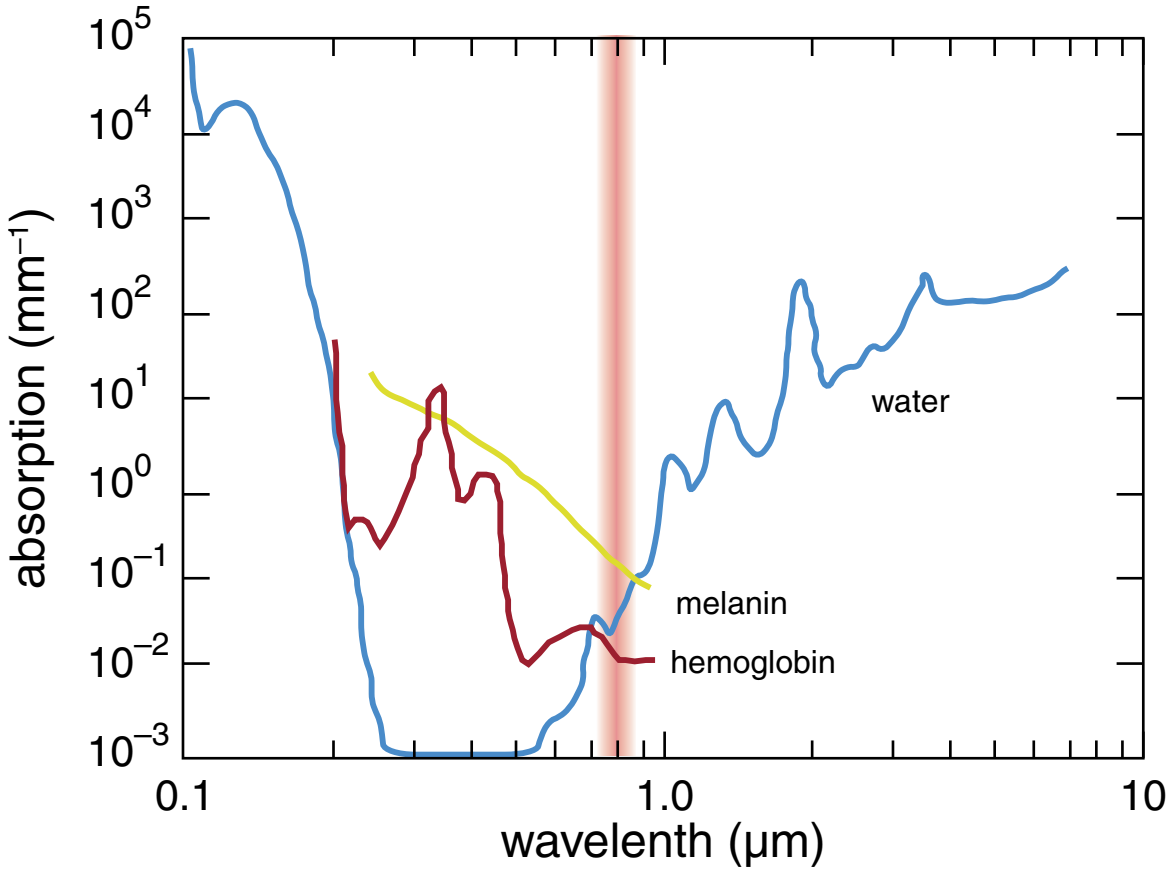
Ti:sapphire lasers



pulse duration:	50 fs	repetition rate:	80 MHz
average power:	1 W	peak power:	10^{10} W
energy per pulse:	1 mJ	wavelength:	800 nm

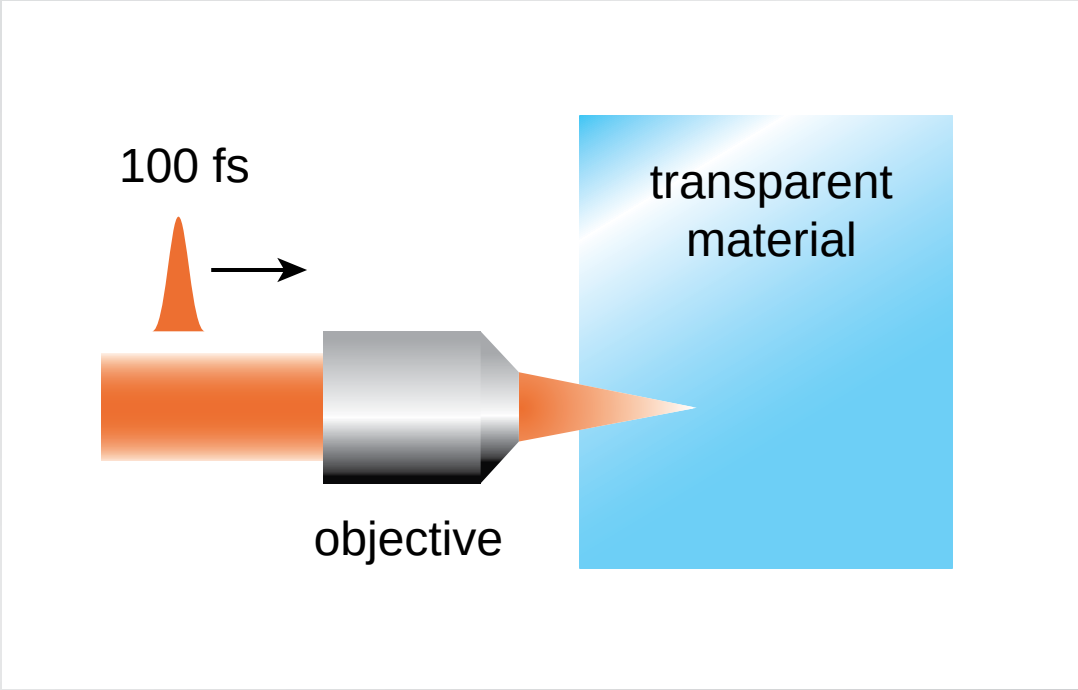
Femtosecond micromachining

tissue is nearly transparent at 800 nm



Femtosecond micromachining

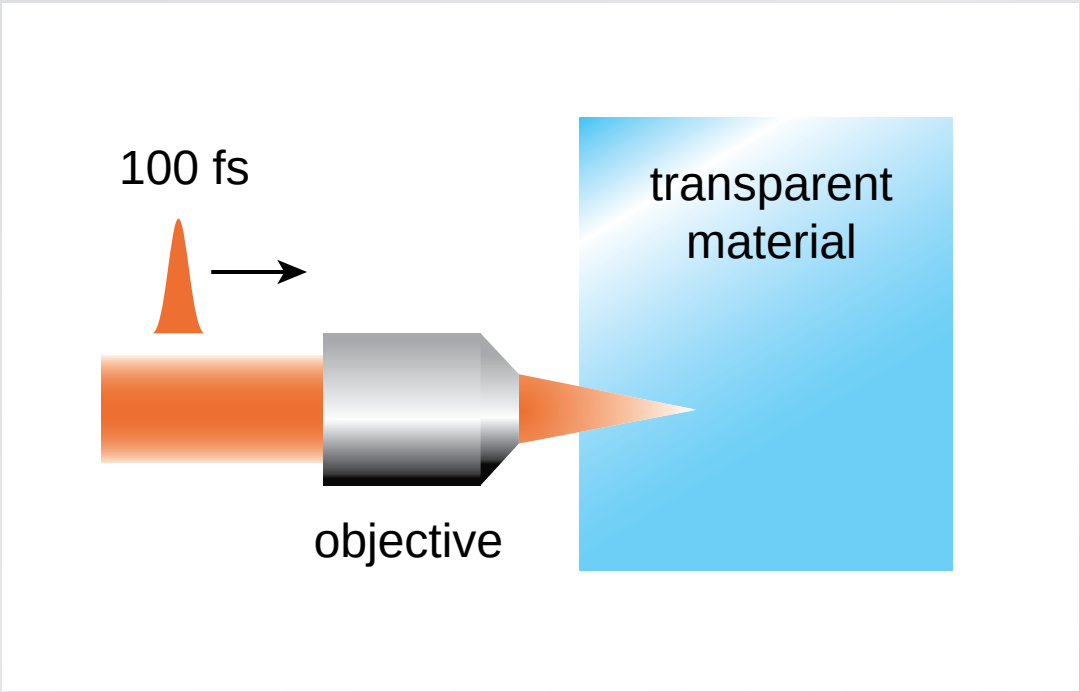
focus laser beam inside material



Opt. Lett. **21**, 2023 (1996)

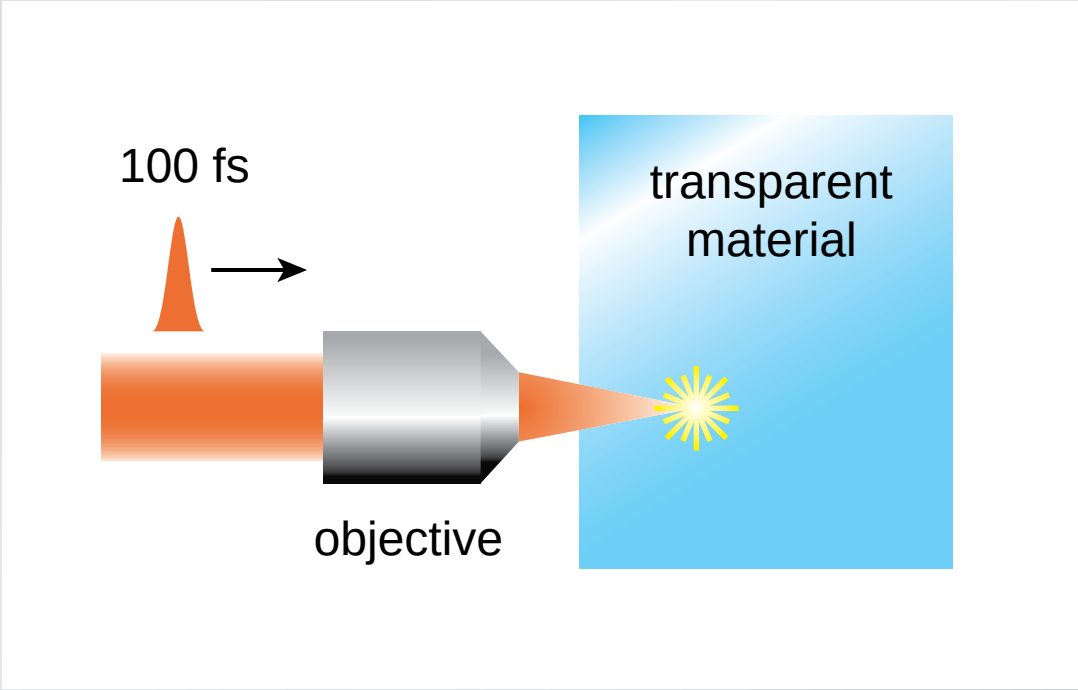
Femtosecond micromachining

high intensity at focus…



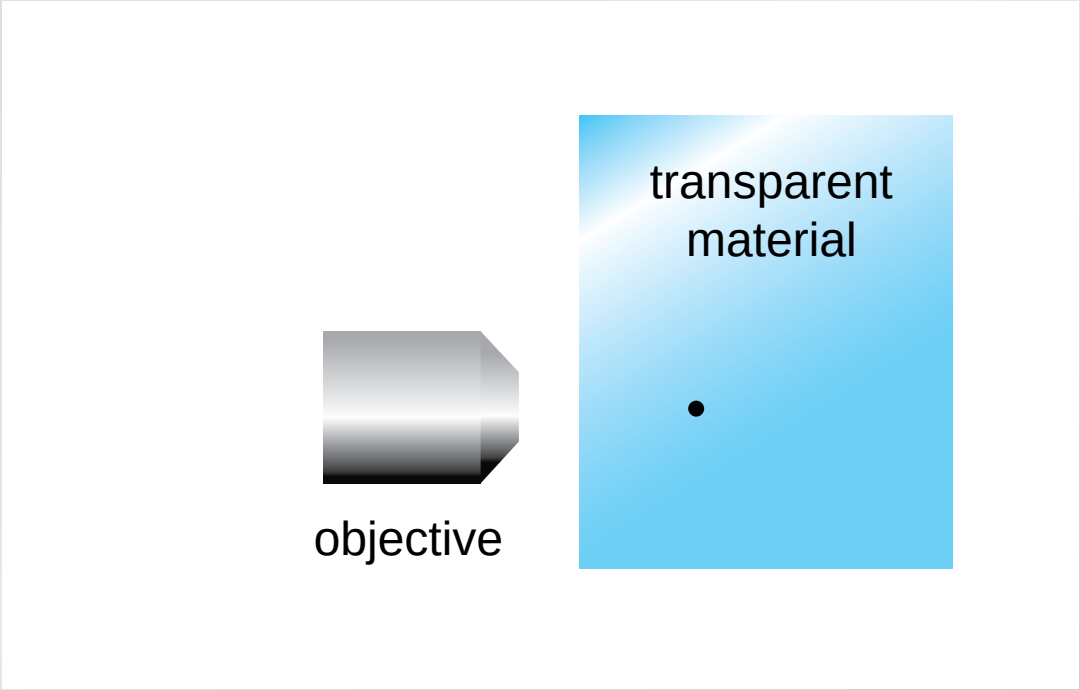
Femtosecond micromachining

…causes nonlinear ionization…

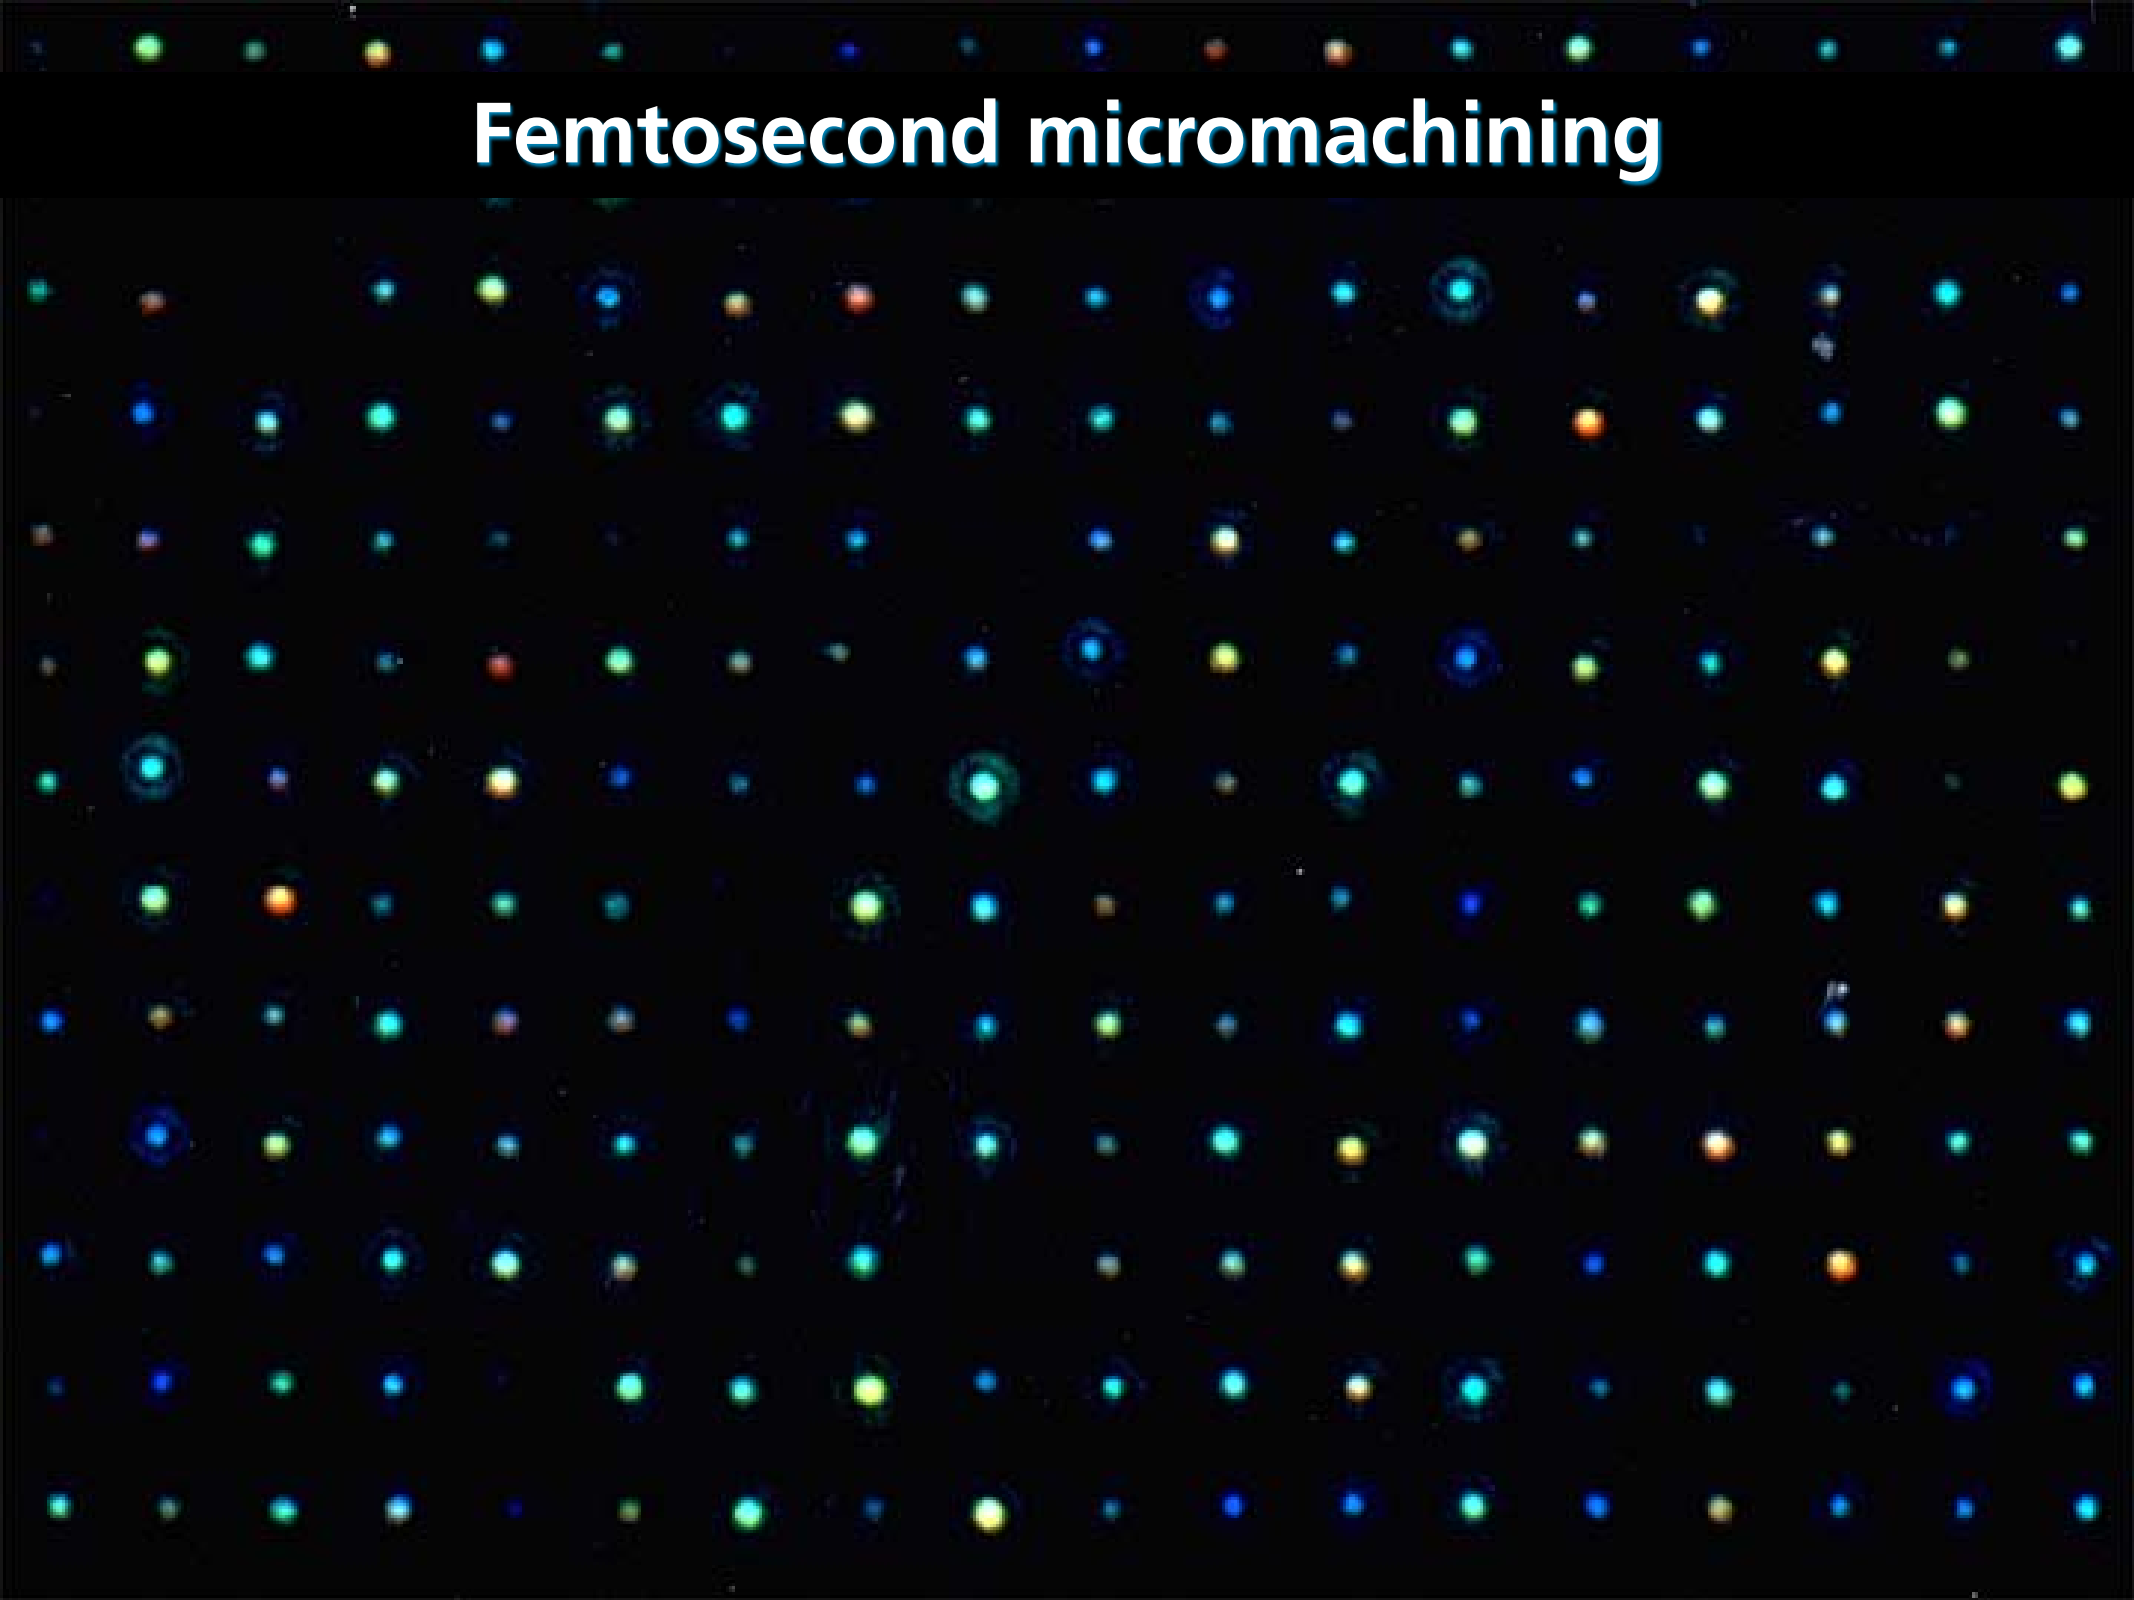


Femtosecond micromachining

and ‘microexplosion’ causes microscopic damage…



Femtosecond micromachining

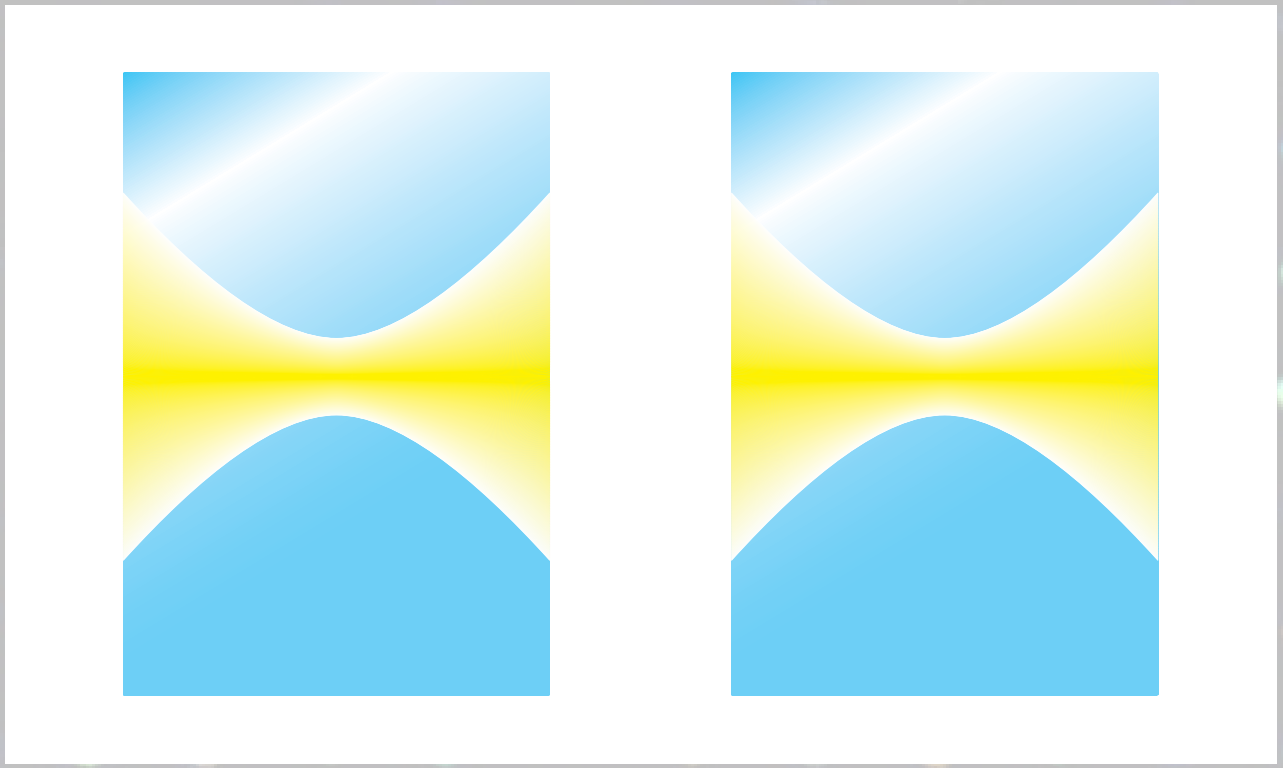


Femtosecond micromachining

photon energy < bandgap $\longrightarrow$ nonlinear interaction

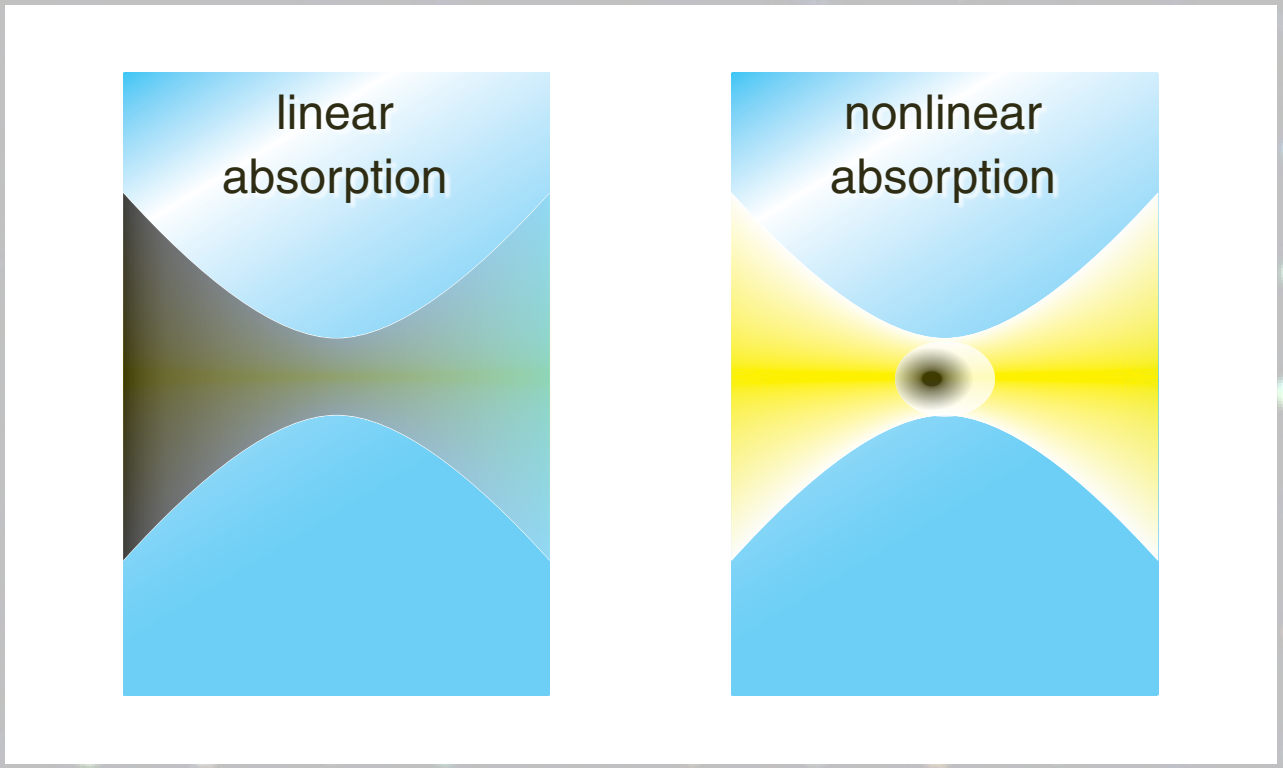
Femtosecond micromachining

nonlinear interaction provides bulk confinement

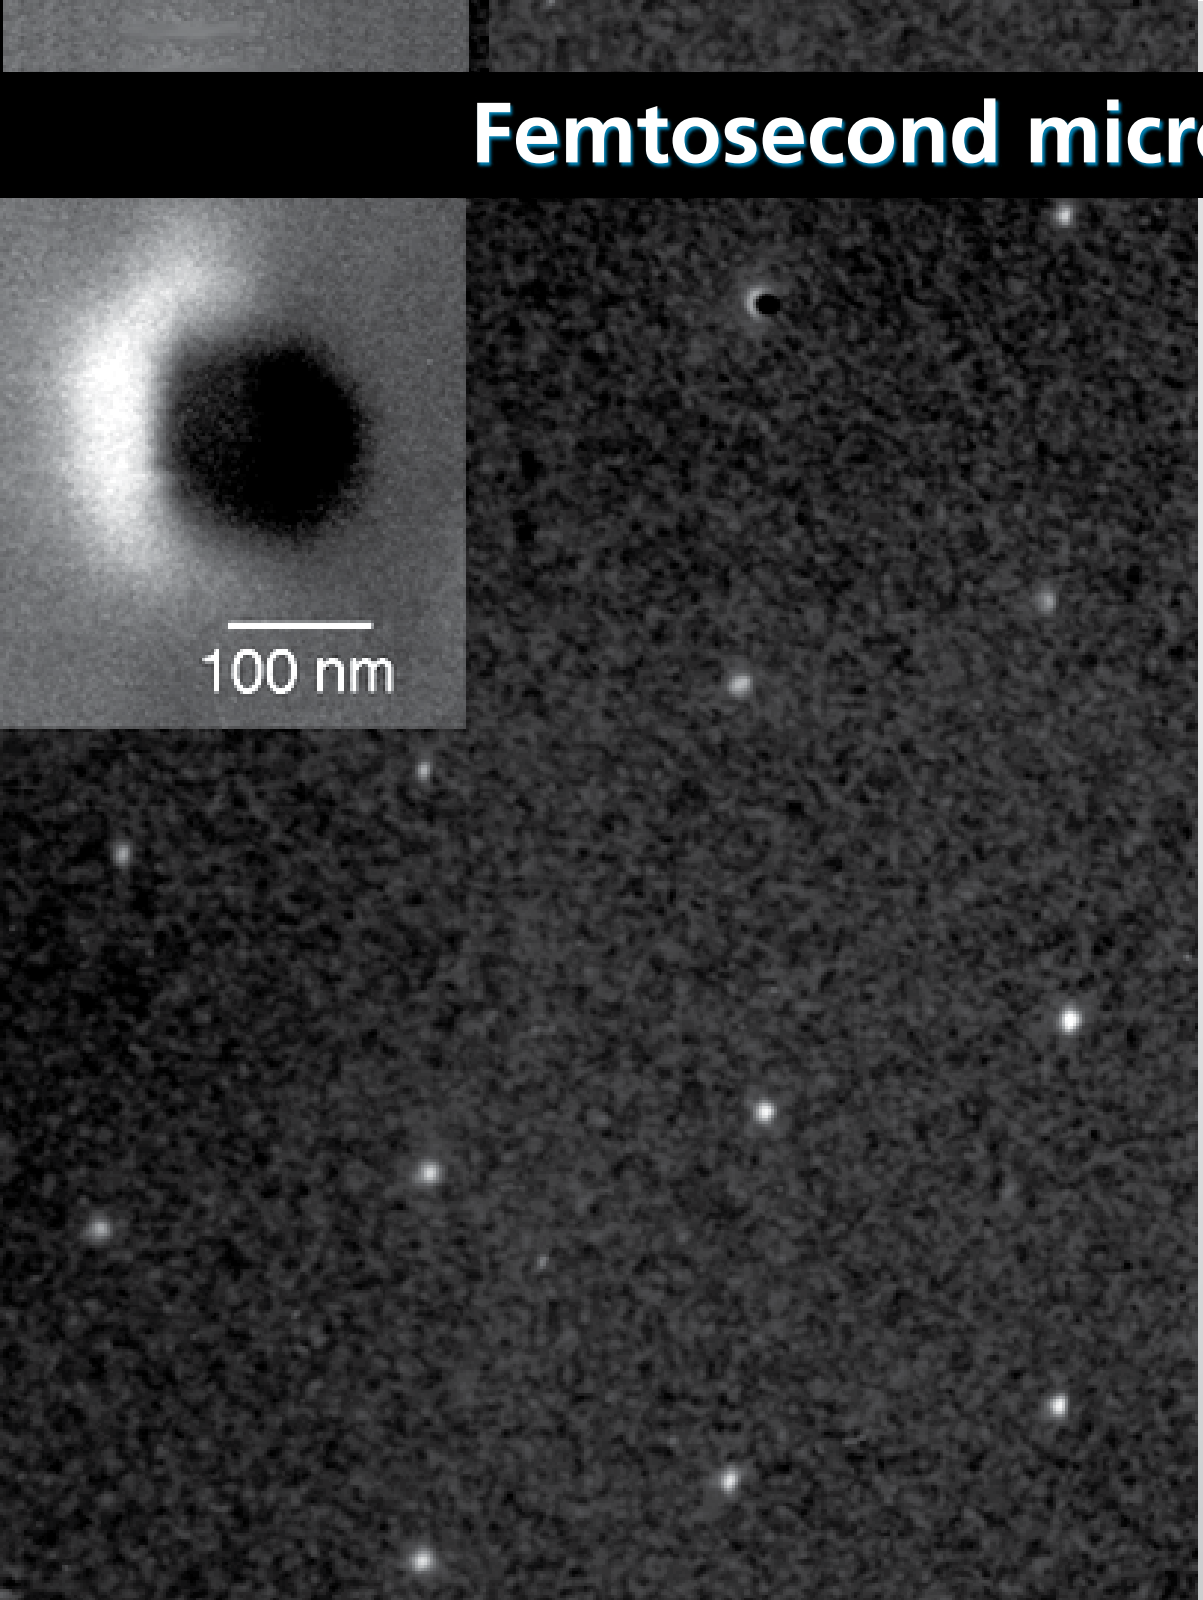


Femtosecond micromachining

nonlinear interaction provides bulk confinement



Femtosecond micromachining

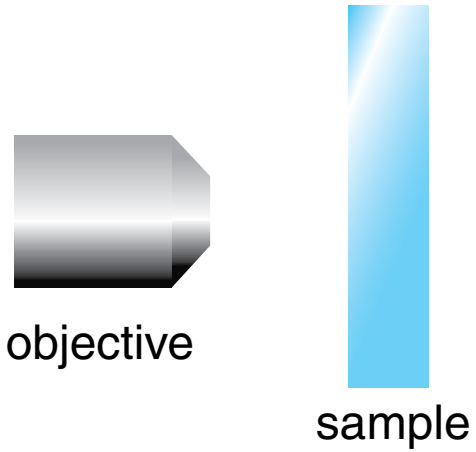


SEM & AFM:

- **100-nm cavities**
- **little colateral damage**

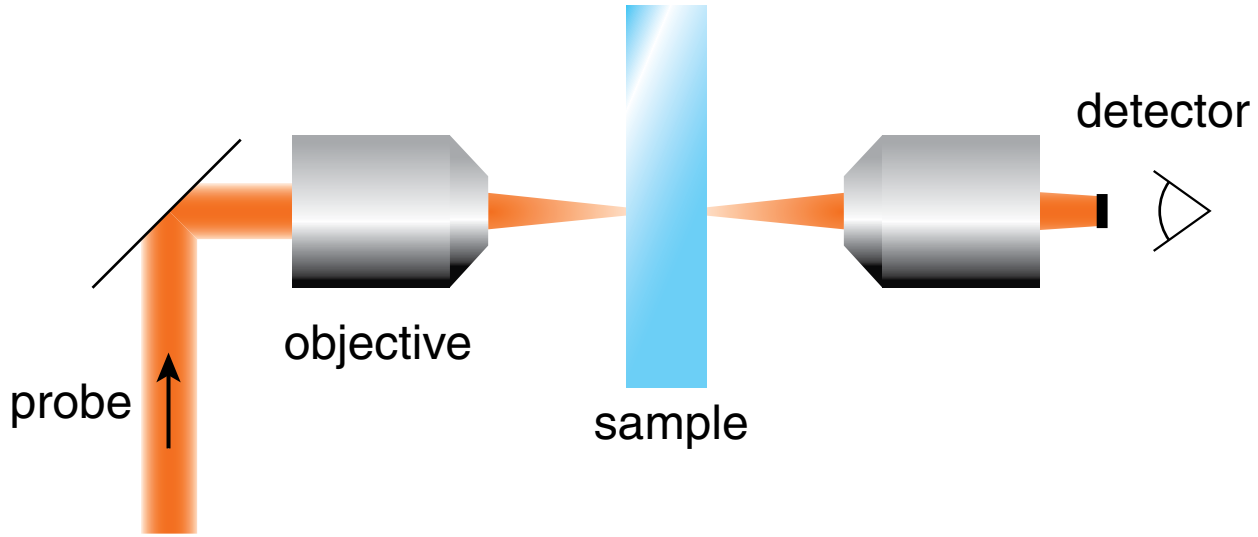
Femtosecond micromachining

Dark-field scattering



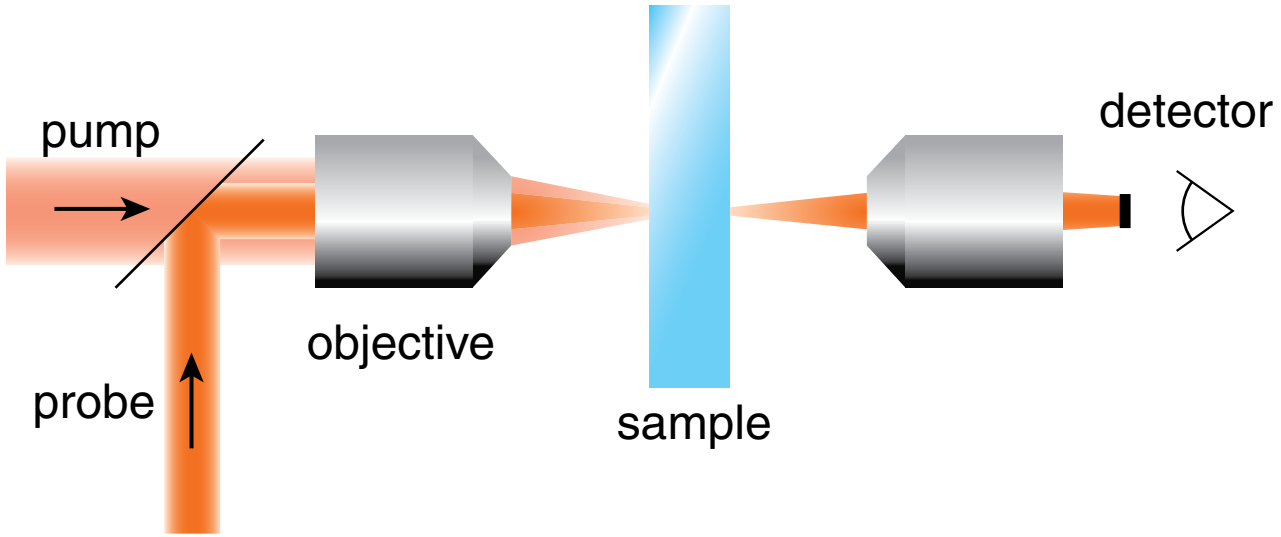
Femtosecond micromachining

block probe beam…



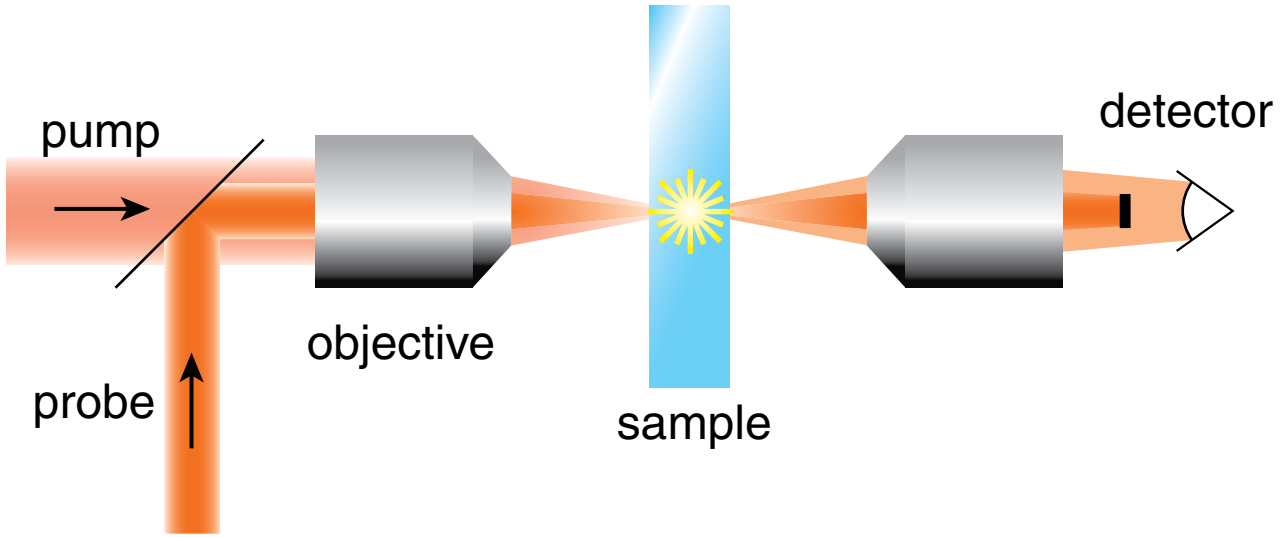
Femtosecond micromachining

… bring in pump beam…



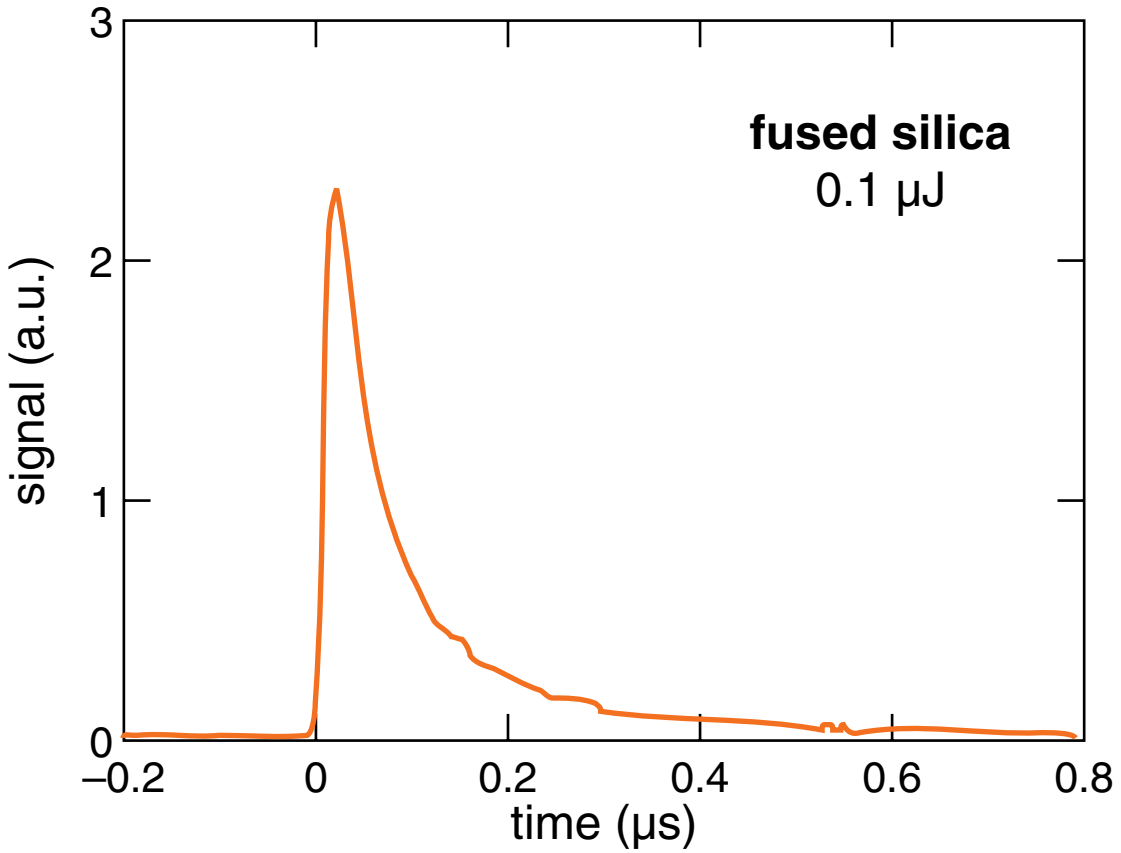
Femtosecond micromachining

… damage scatters probe beam



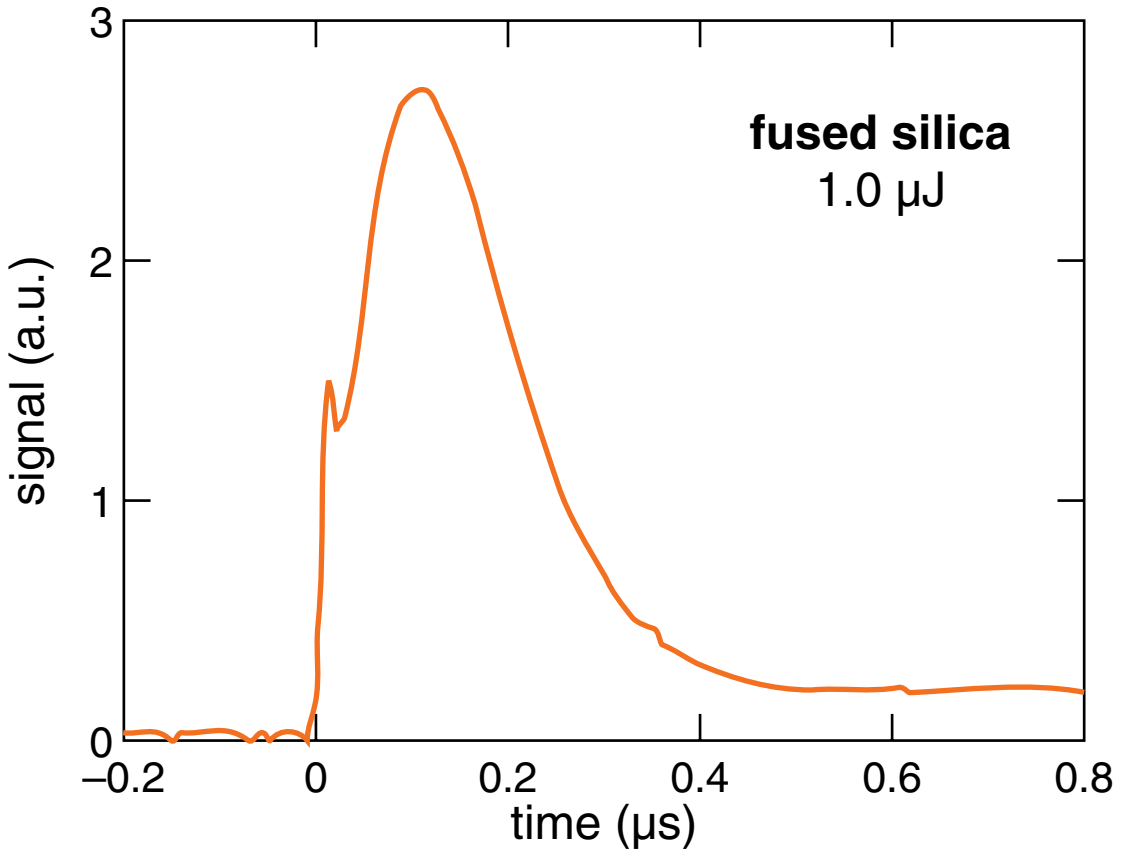
Femtosecond micromachining

scattered signal



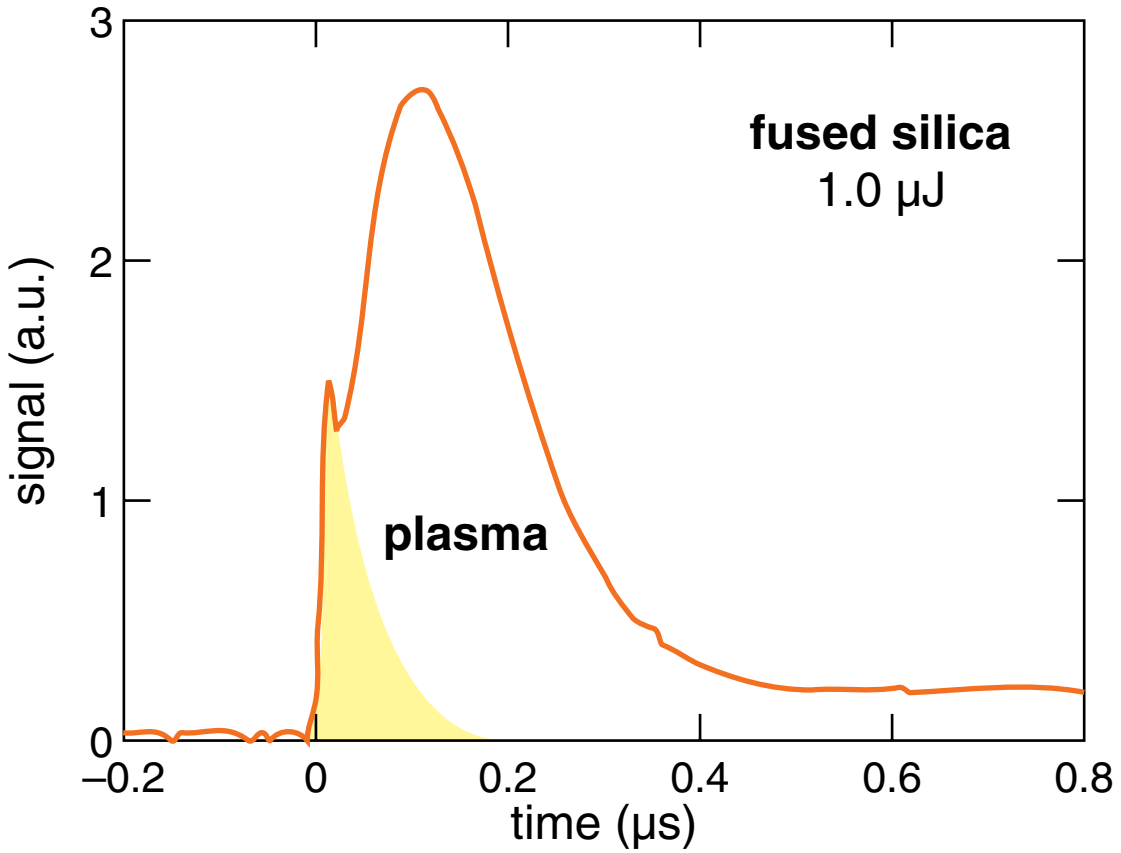
Femtosecond micromachining

scattered signal



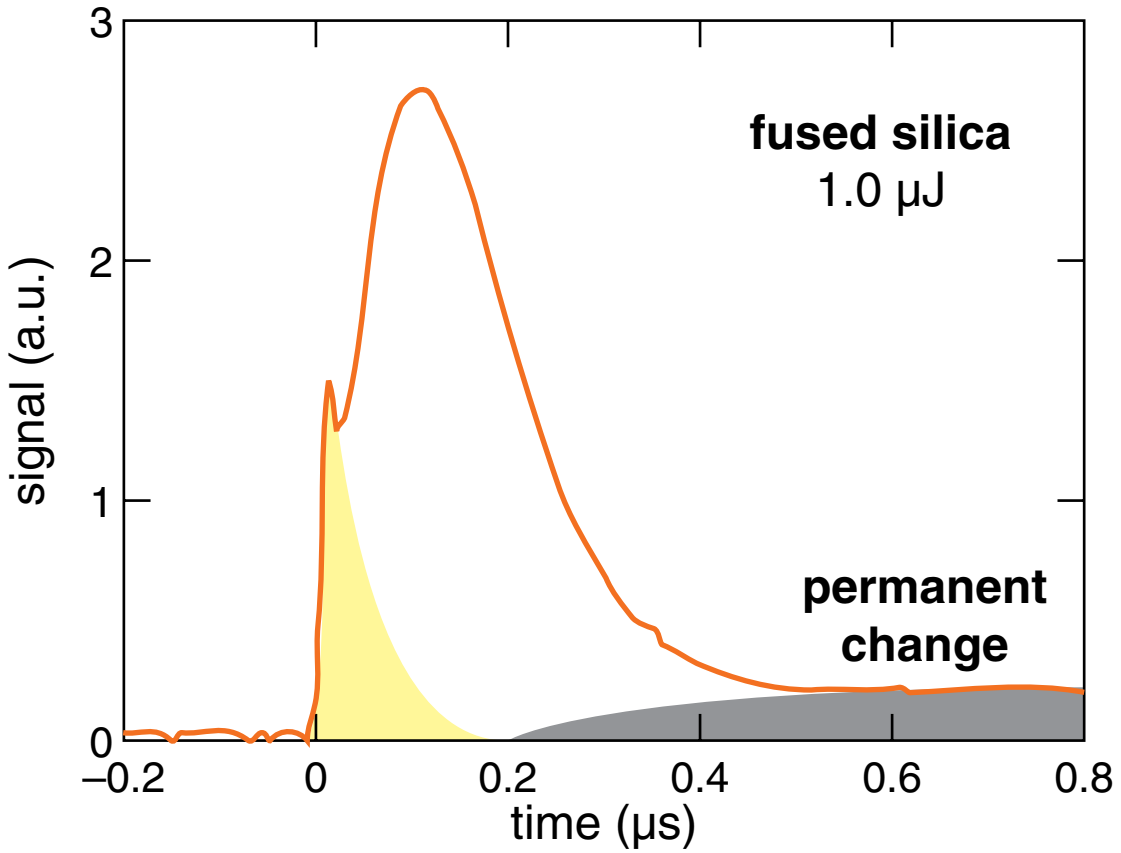
Femtosecond micromachining

scattered signal



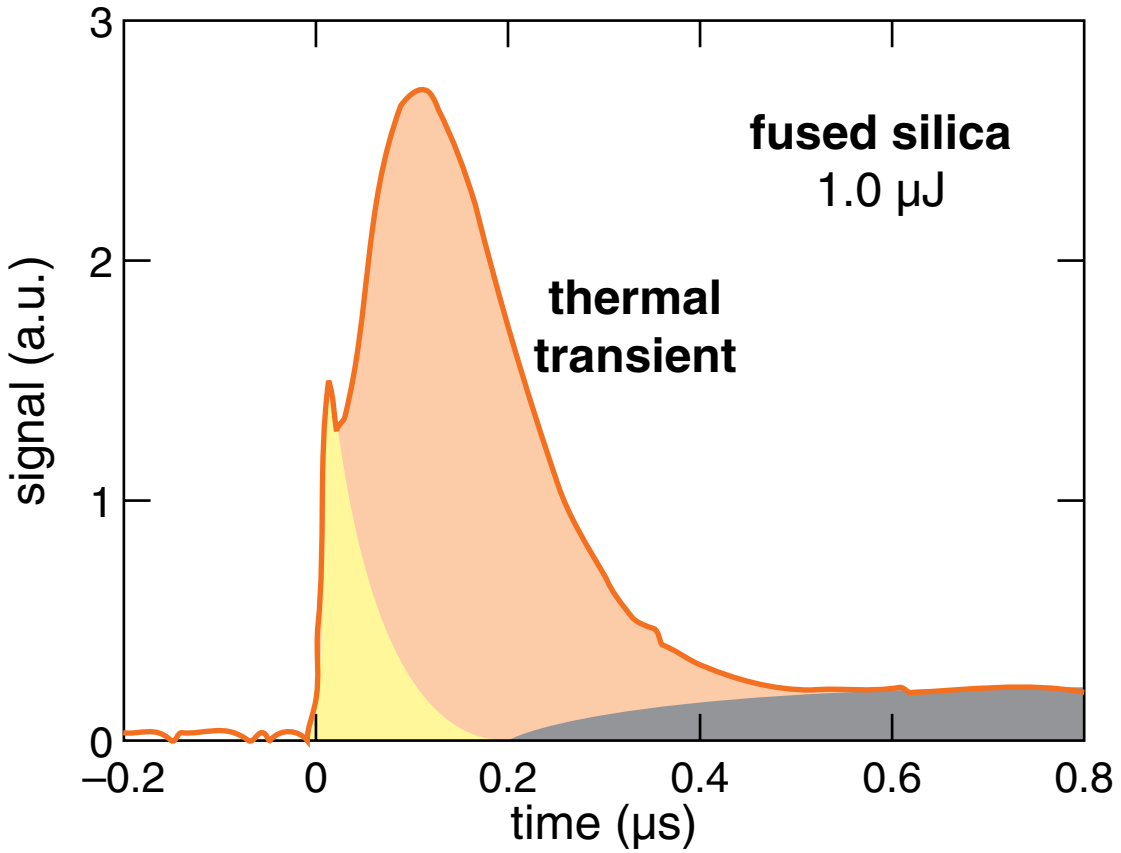
Femtosecond micromachining

scattered signal



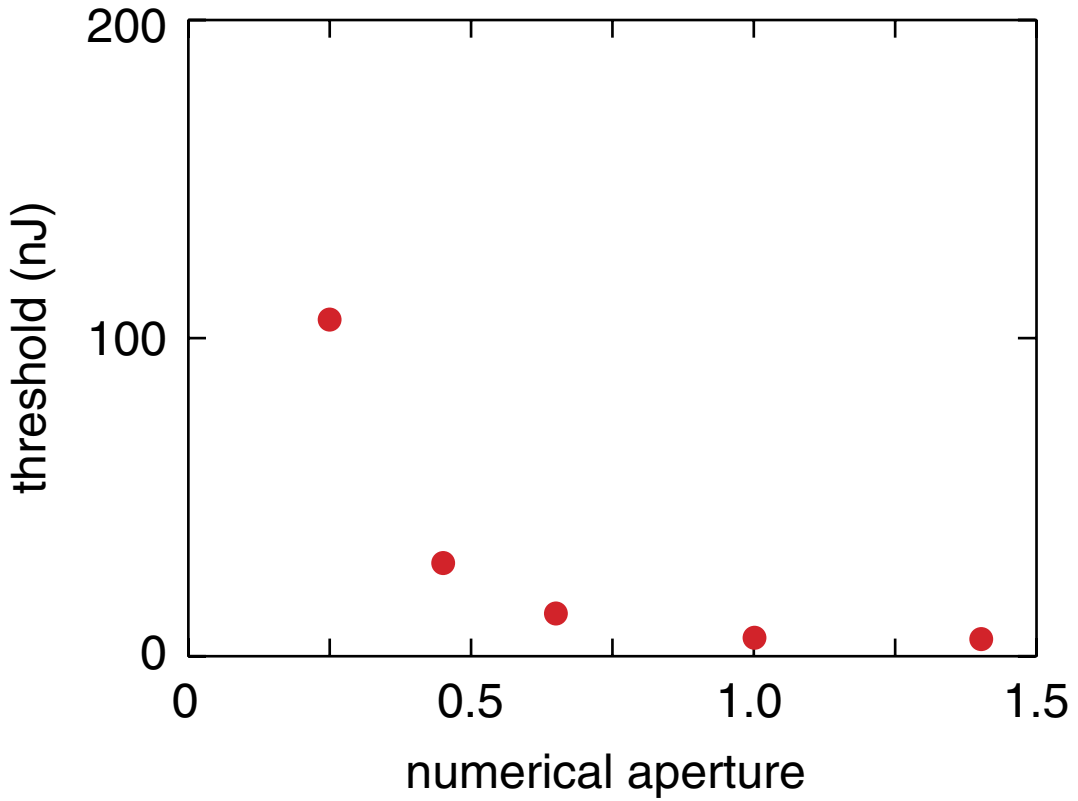
Femtosecond micromachining

scattered signal



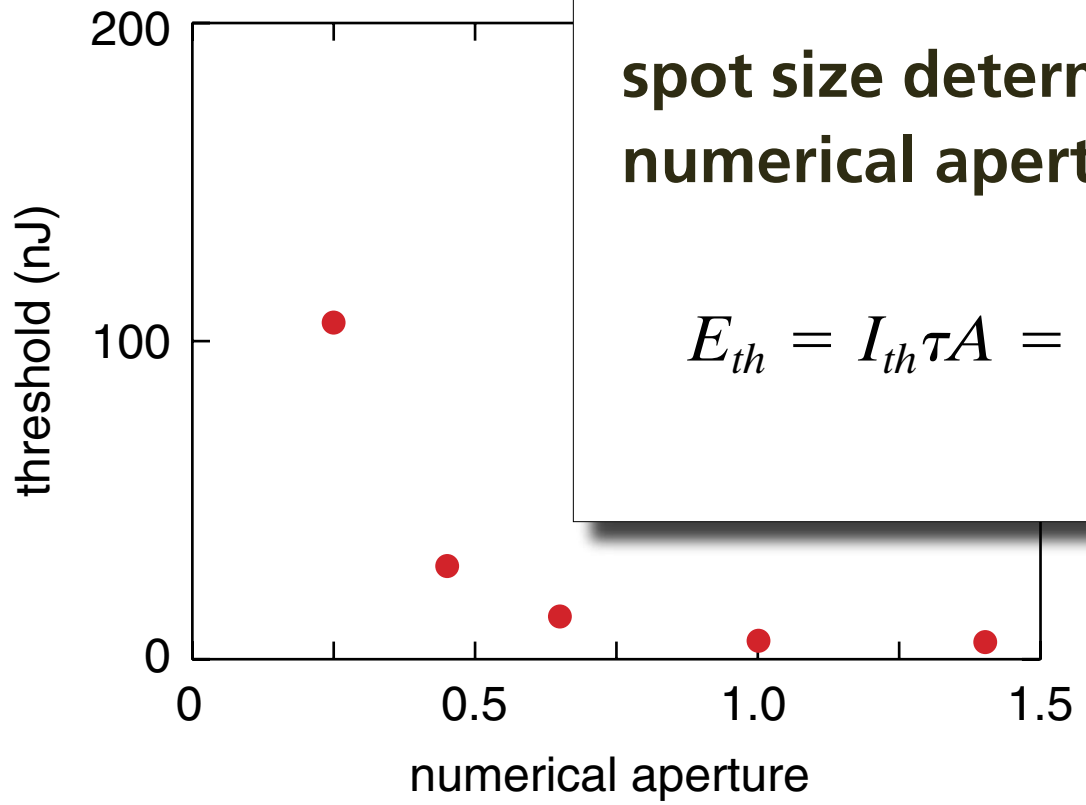
Femtosecond micromachining

vary numerical aperture



Femtosecond micromachining

vary numeric



intensity threshold:

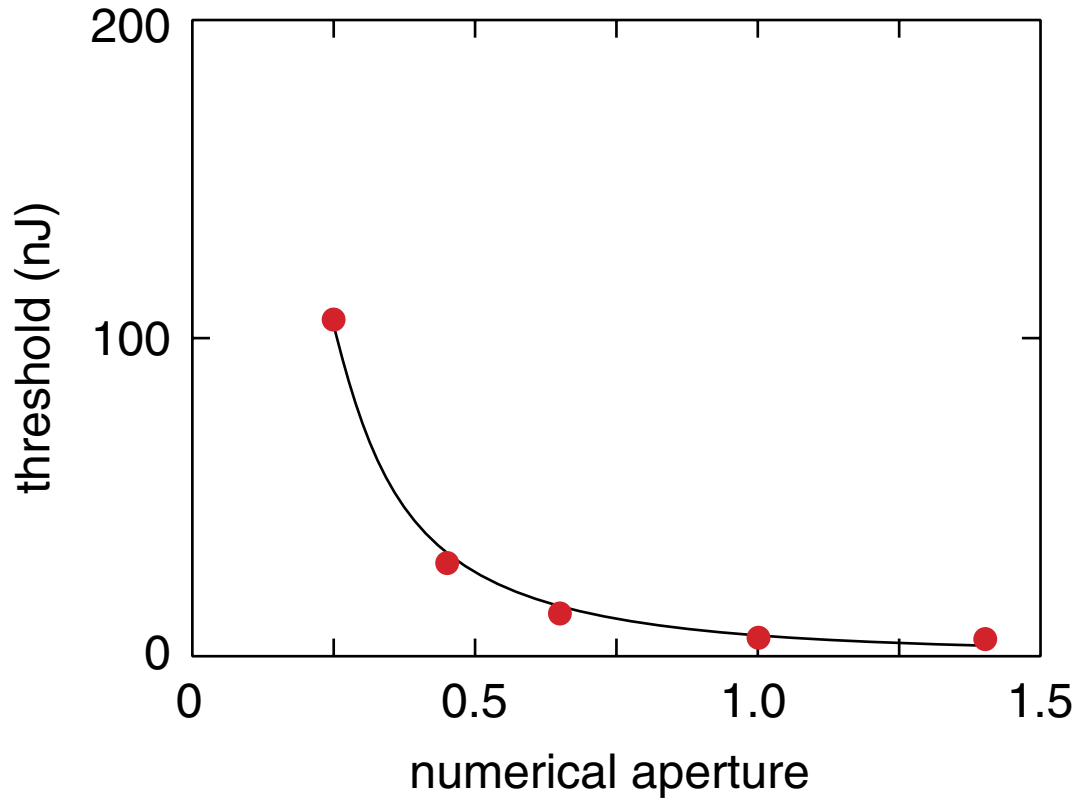
$$E_{th} = I_{th}\tau A$$

spot size determined by numerical aperture:

$$E_{th} = I_{th}\tau A = \frac{I_{th}\tau\lambda^2}{\pi(\mathrm{NA})^2}$$

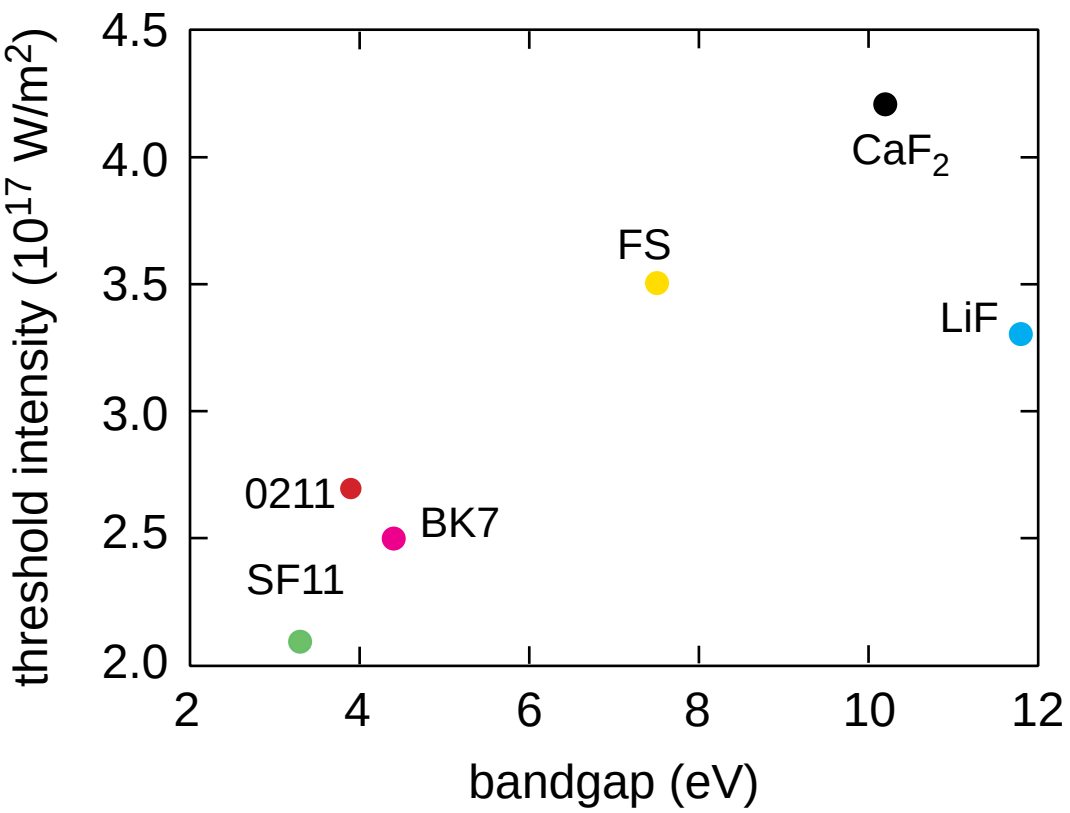
Femtosecond micromachining

fit gives threshold intensity: I_{th} = 2.5 x 10^{17} W/m^2



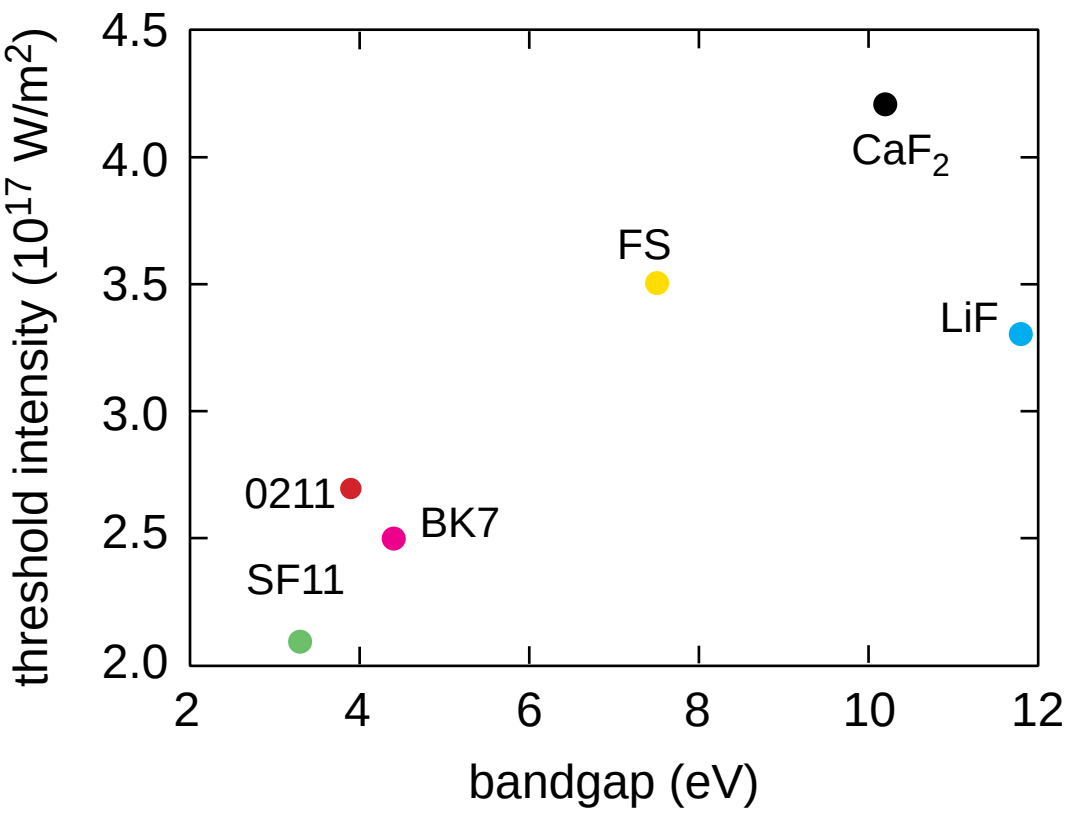
Femtosecond micromachining

vary material…



Femtosecond micromachining

…threshold varies with band gap (but not much!)



Femtosecond micromachining

- nonlinear interaction
- disrupt matter inside bulk
- ablation at very low energy

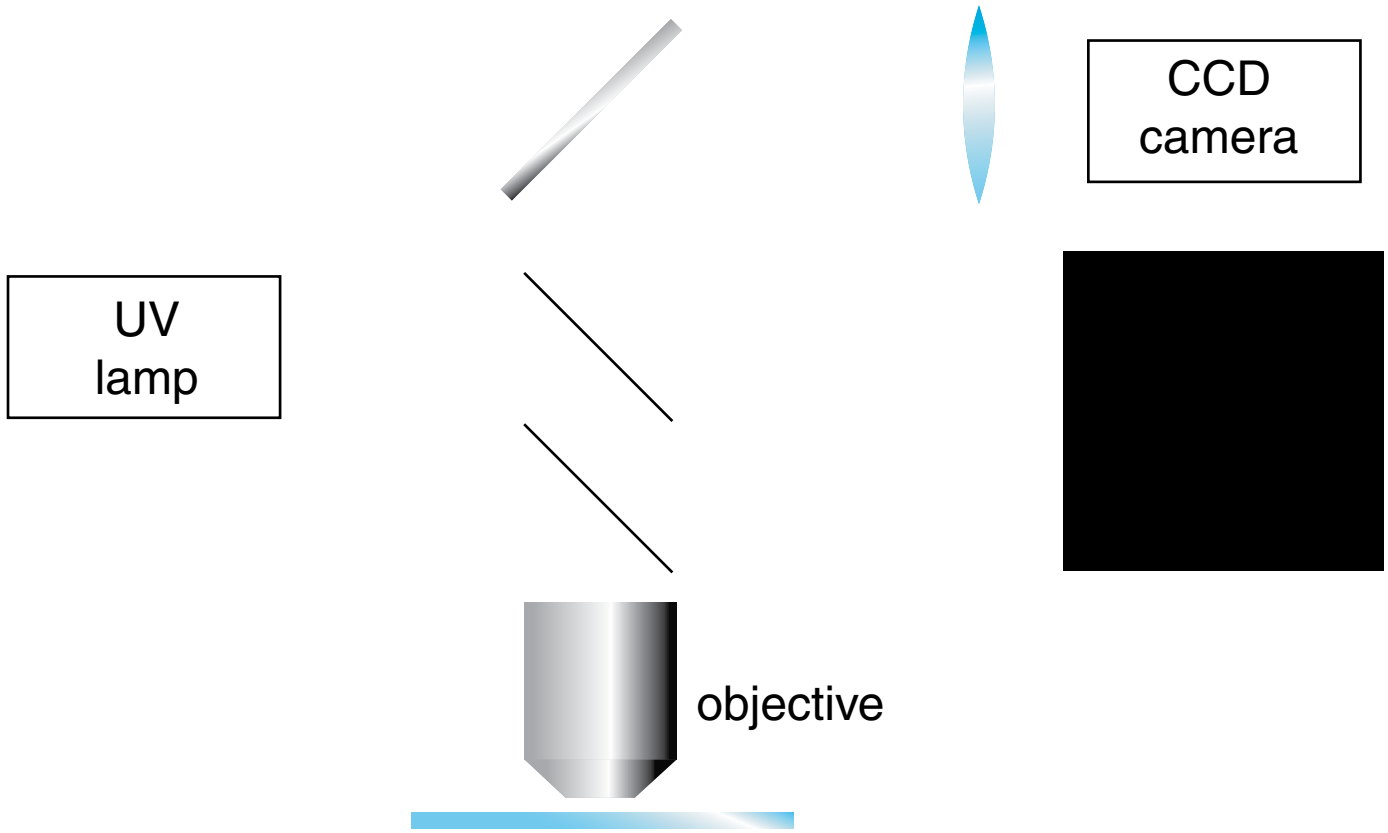
Outline

- femtosecond micromachining
- **subcellular surgery**
- nanoneurosurgery

Subcellular surgery

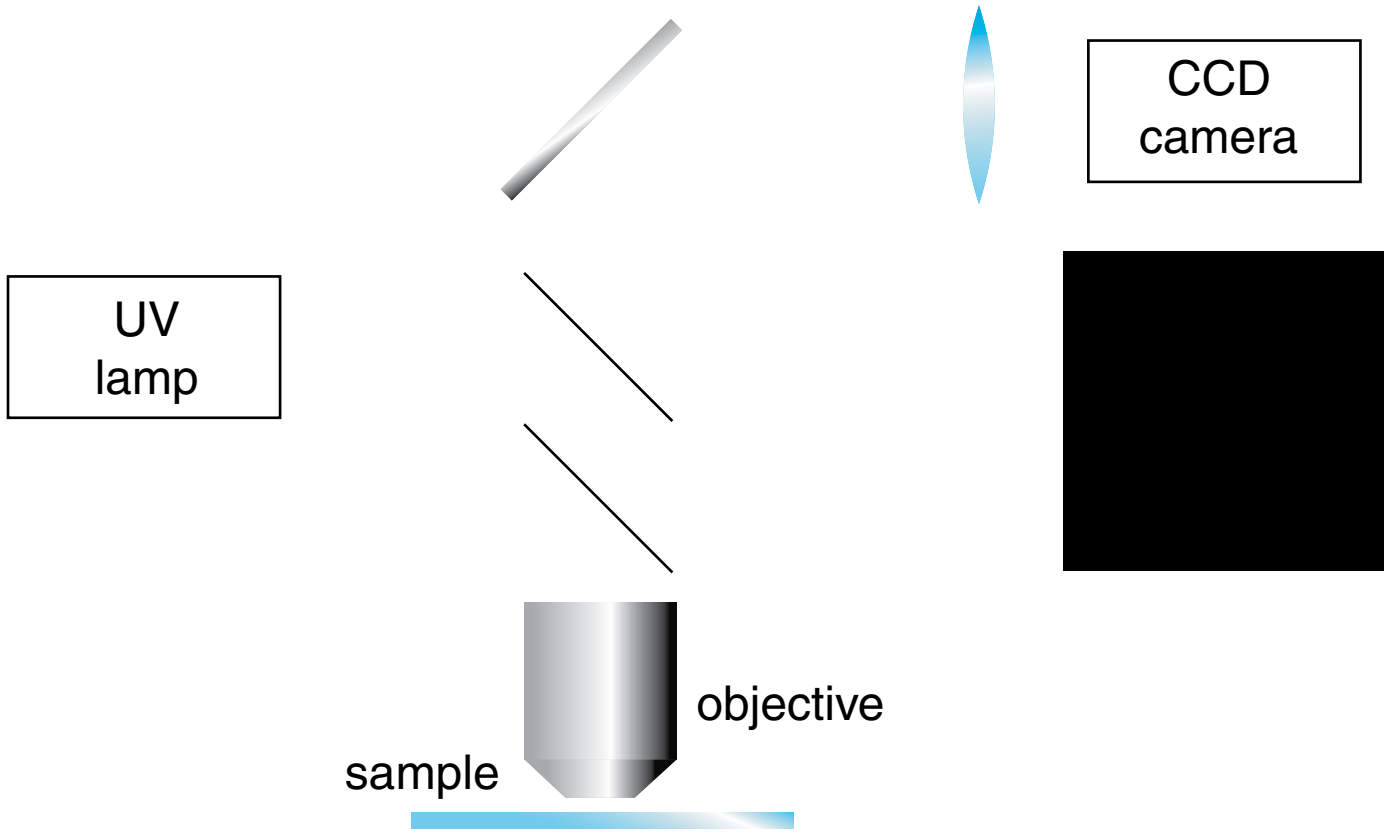
Q: can we ablate material on the subcellular scale?

Subcellular surgery



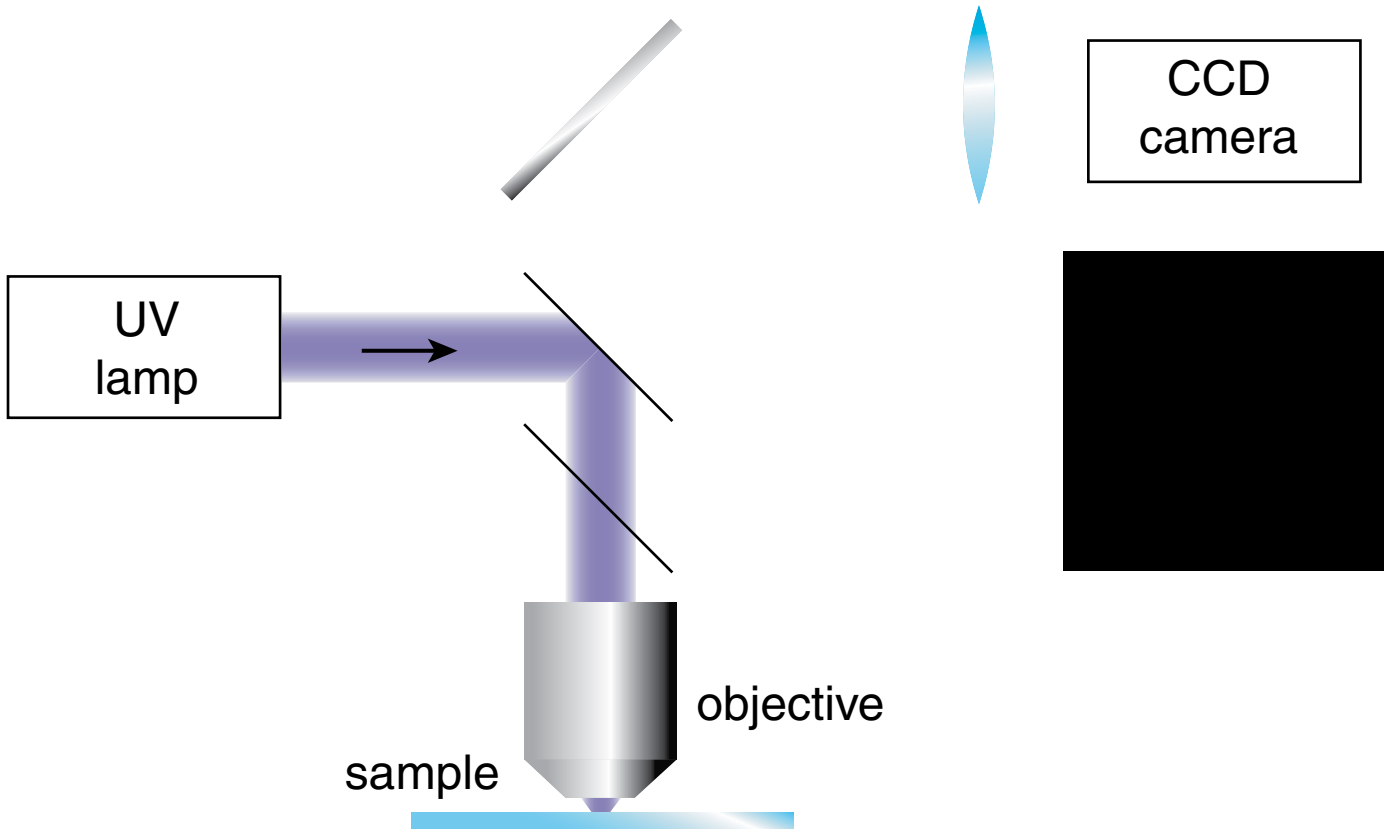
epi-fluorescence microscope

Subcellular surgery



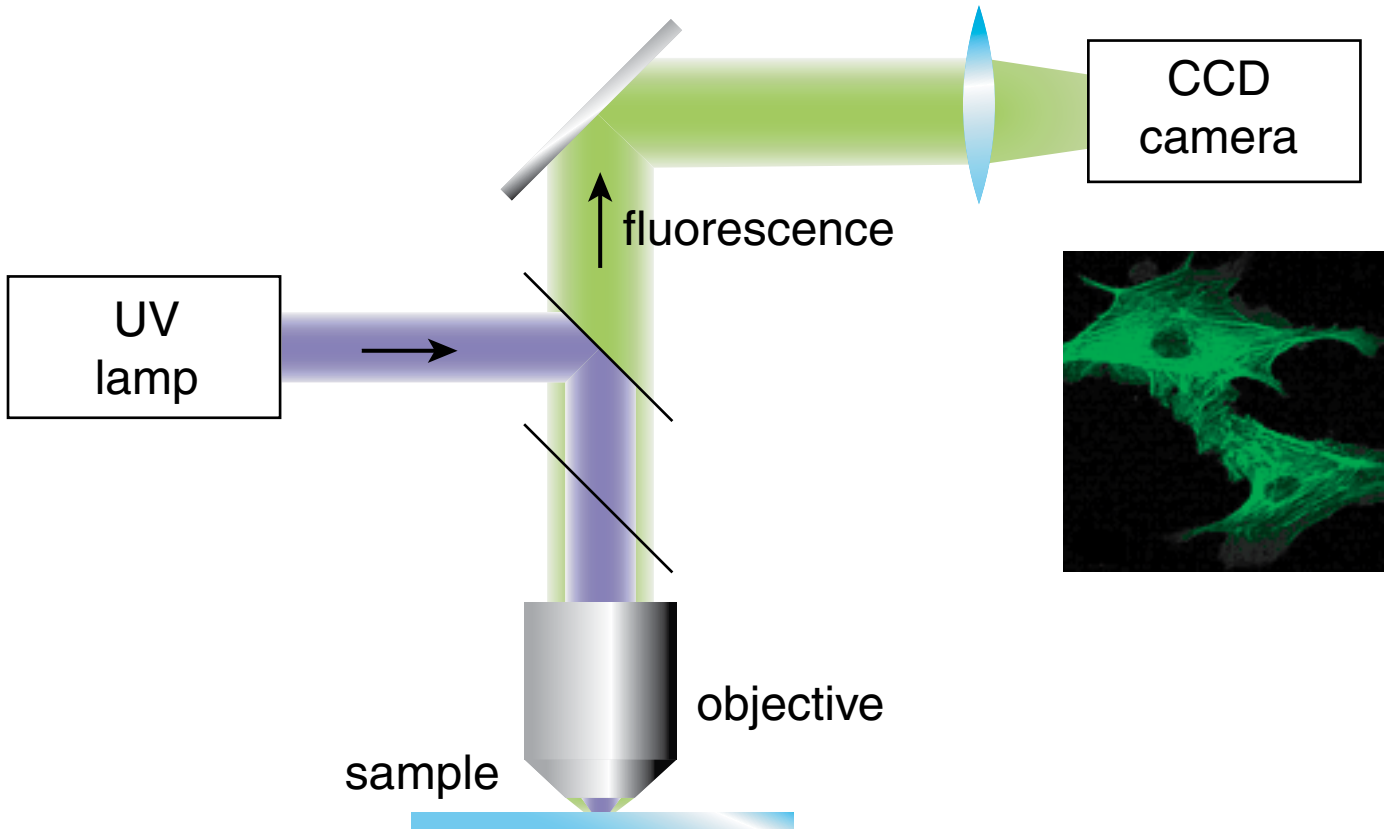
fluorescently label sample

Subcellular surgery



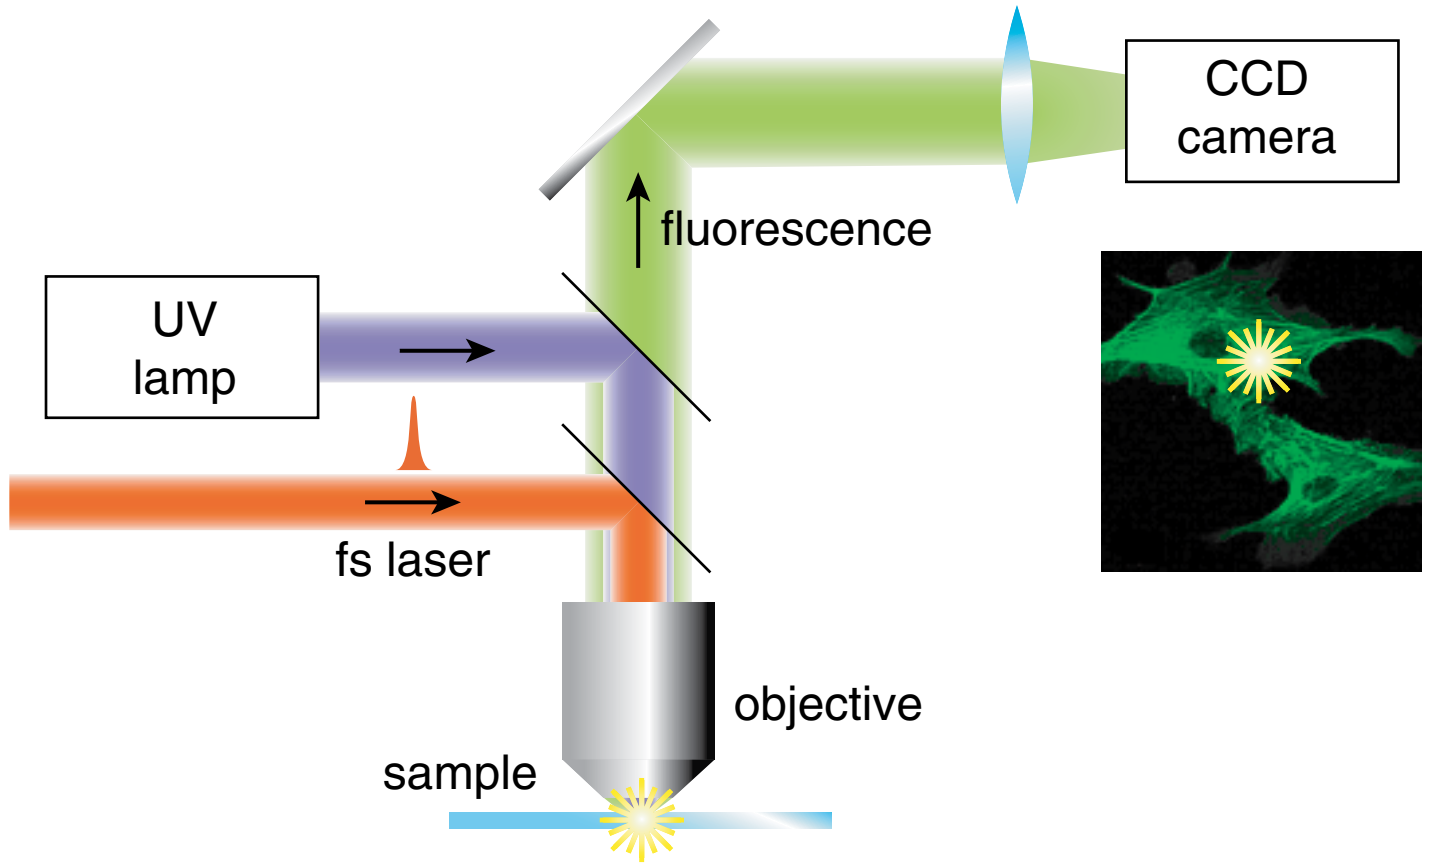
UV illumination…

Subcellular surgery



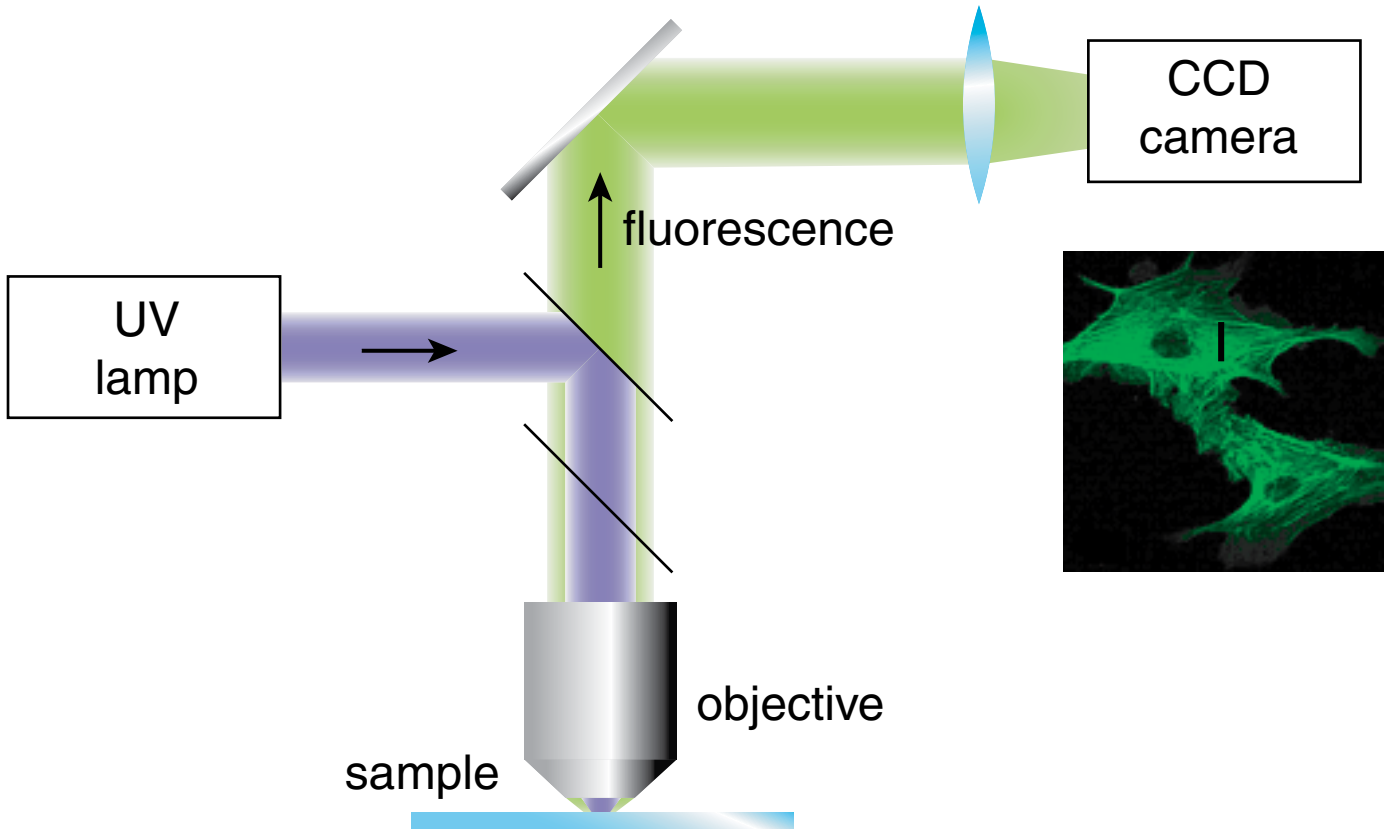
…causes fluorescence

Subcellular surgery



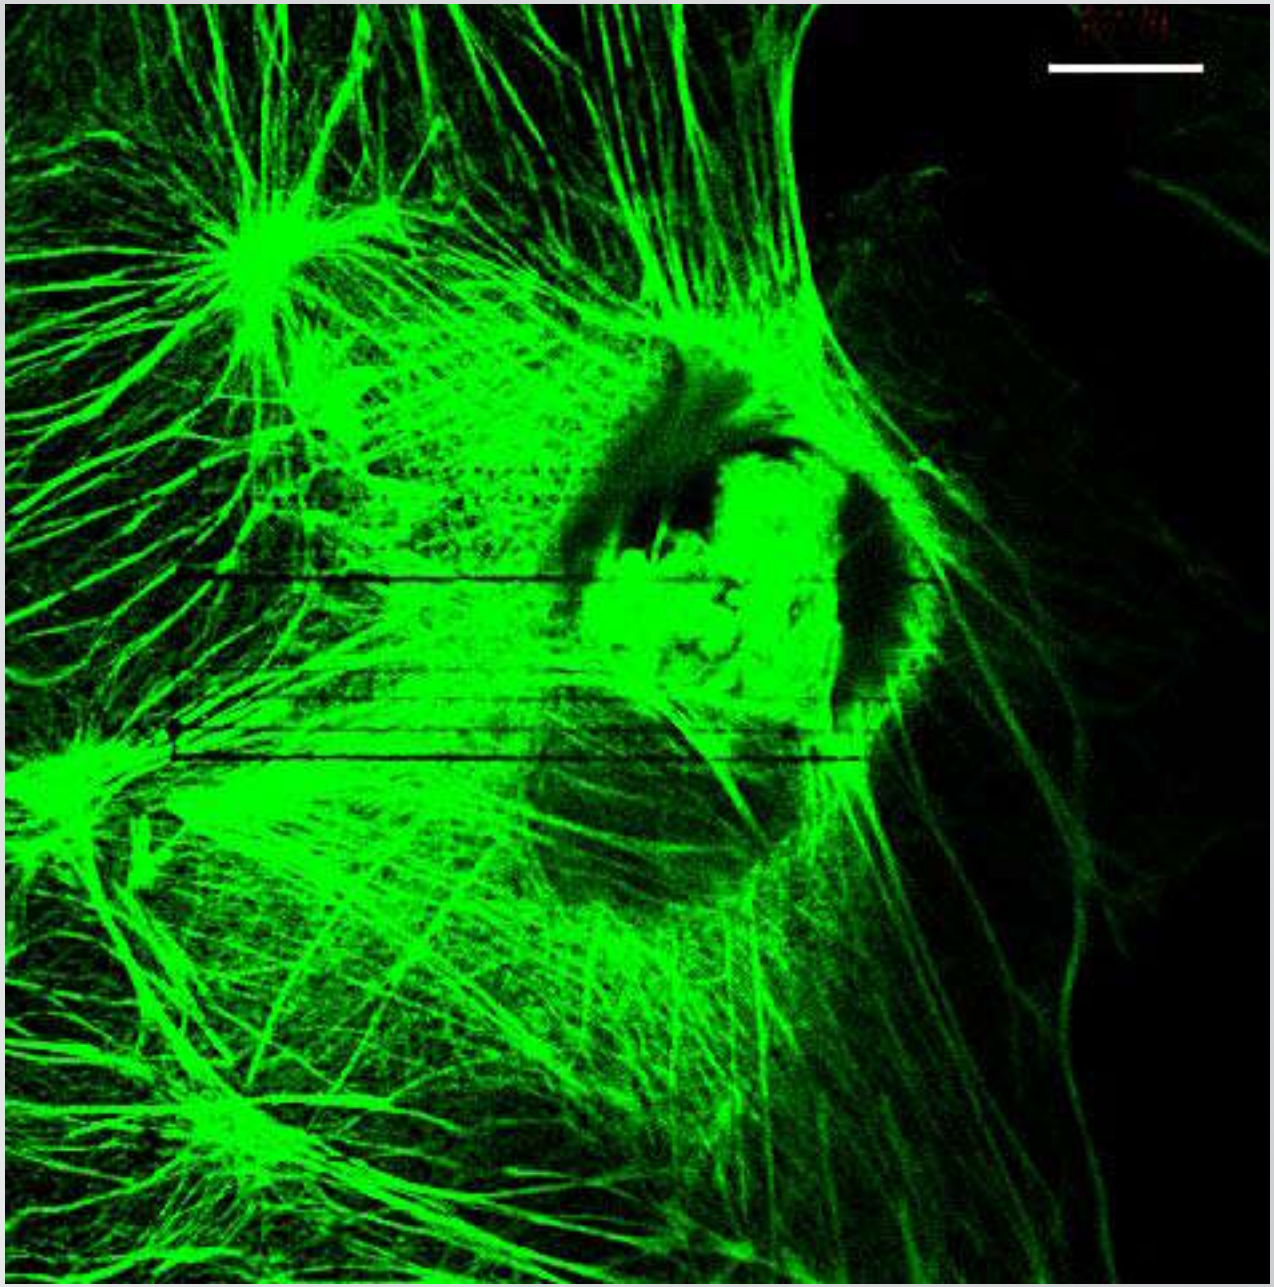
irradiate with fs laser beam

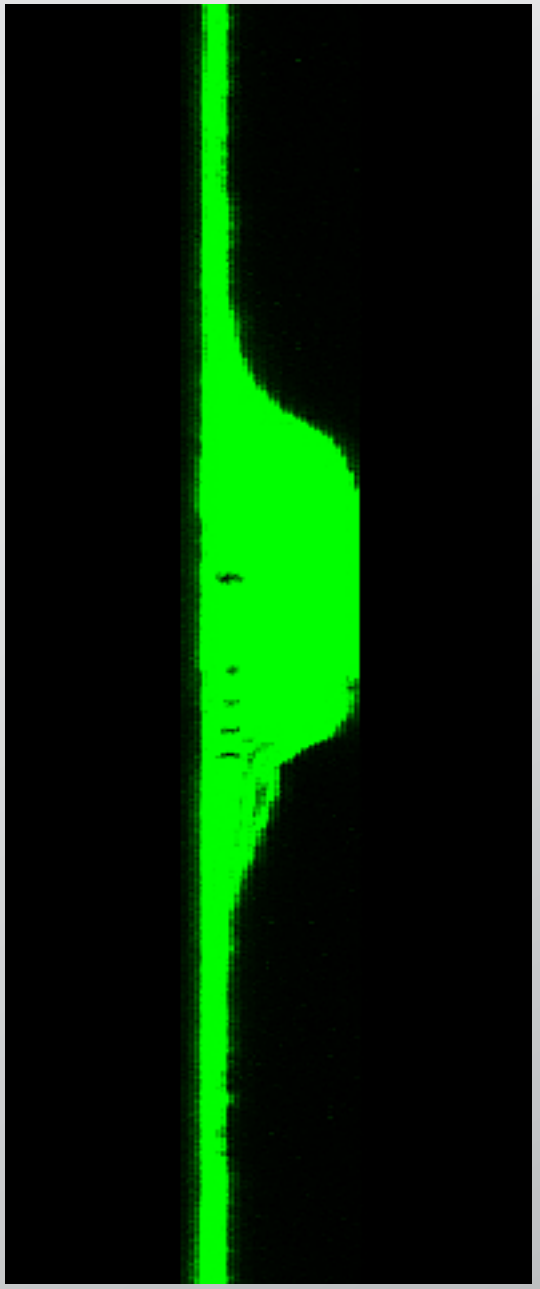
Subcellular surgery



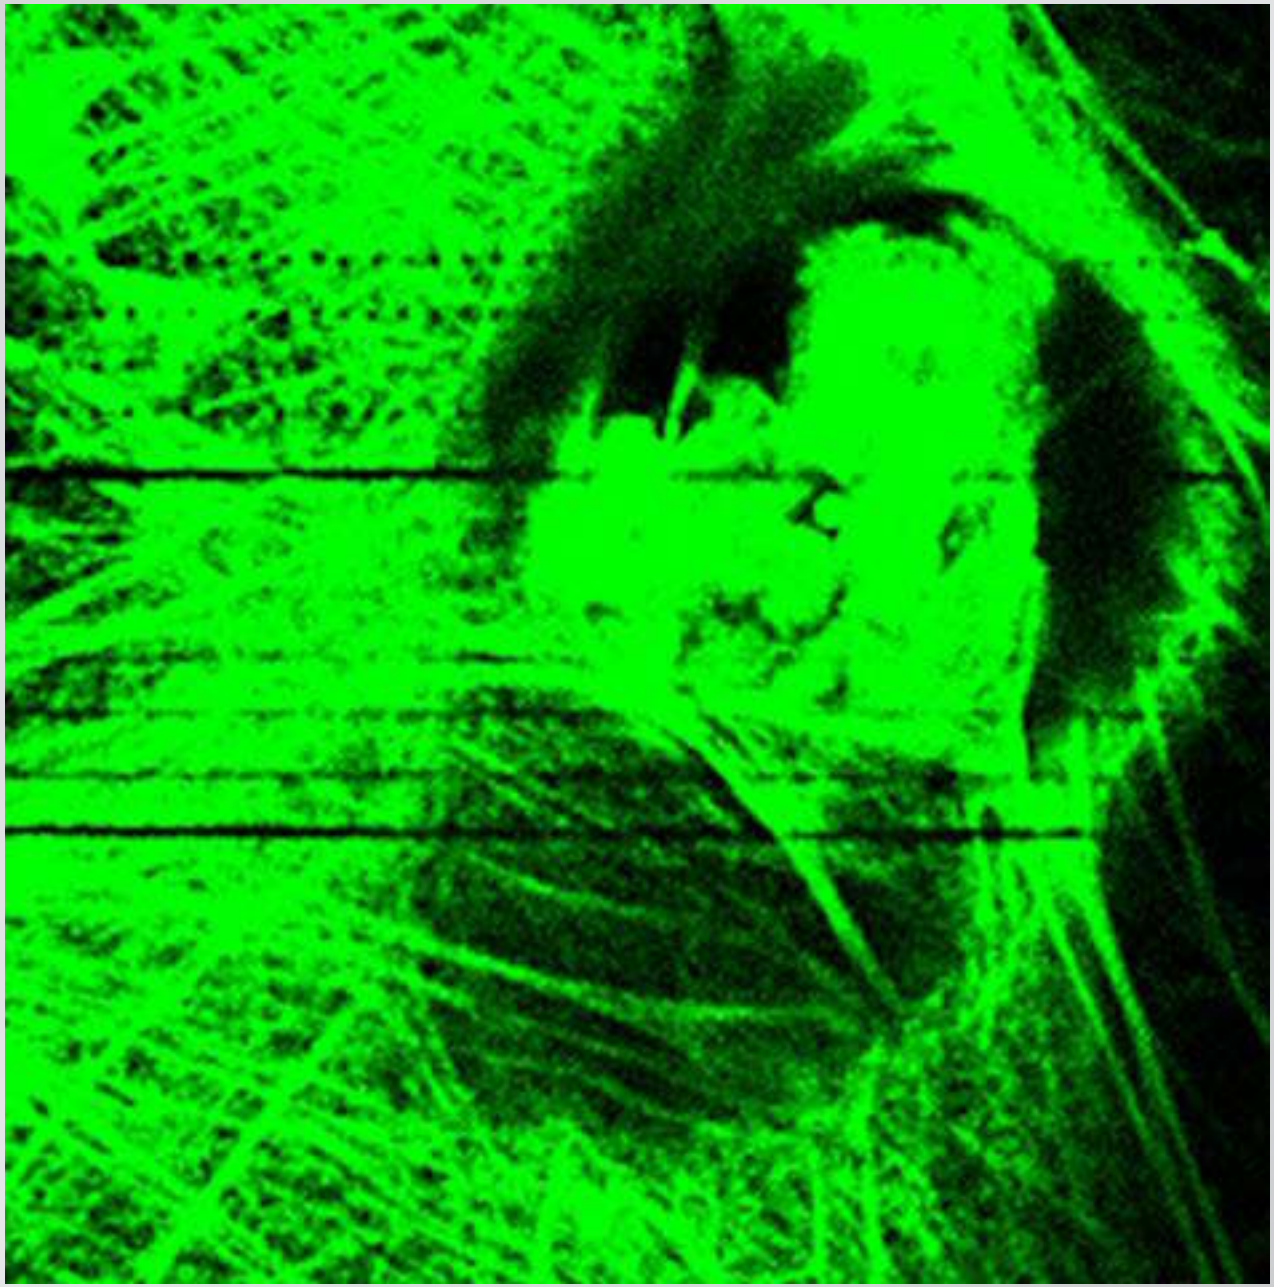
examine resulting ablation

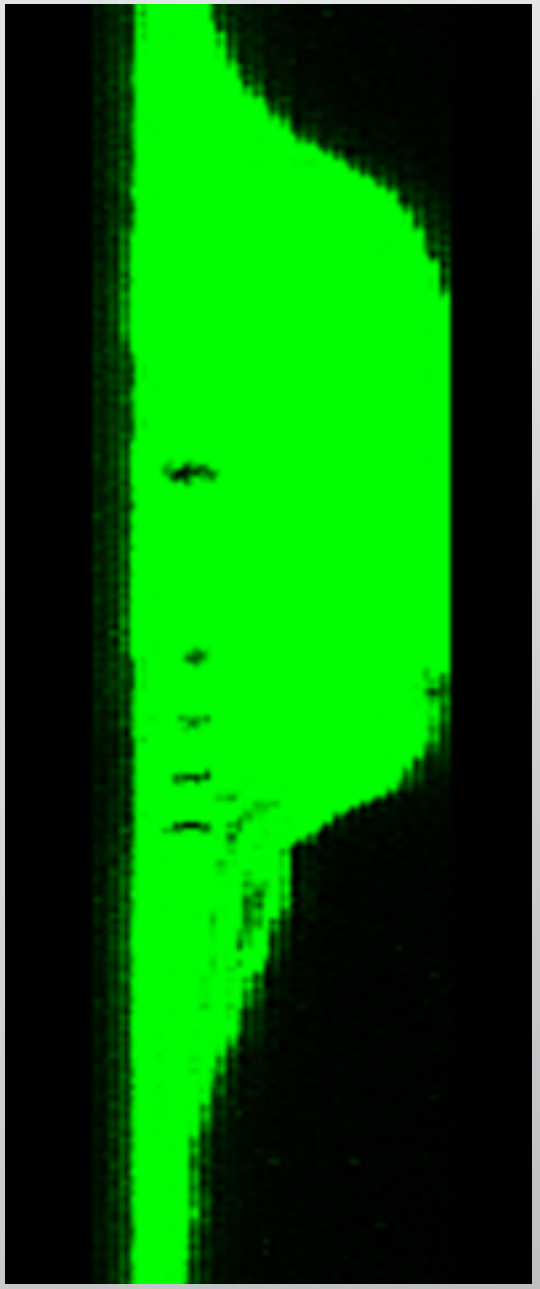
Subcellular surgery





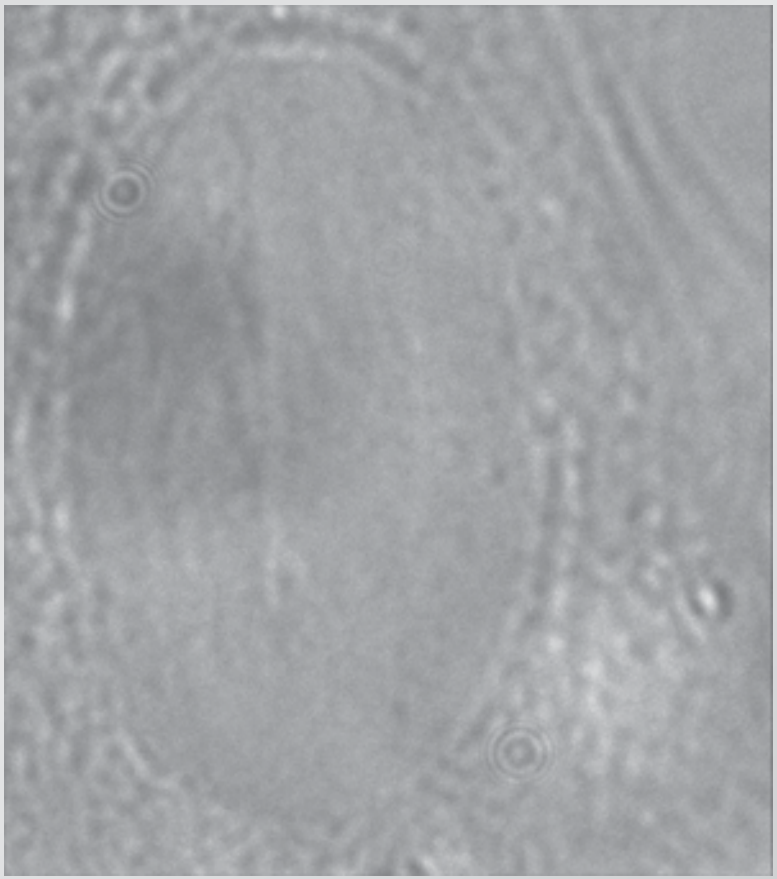
Subcellular surgery





Subcellular surgery

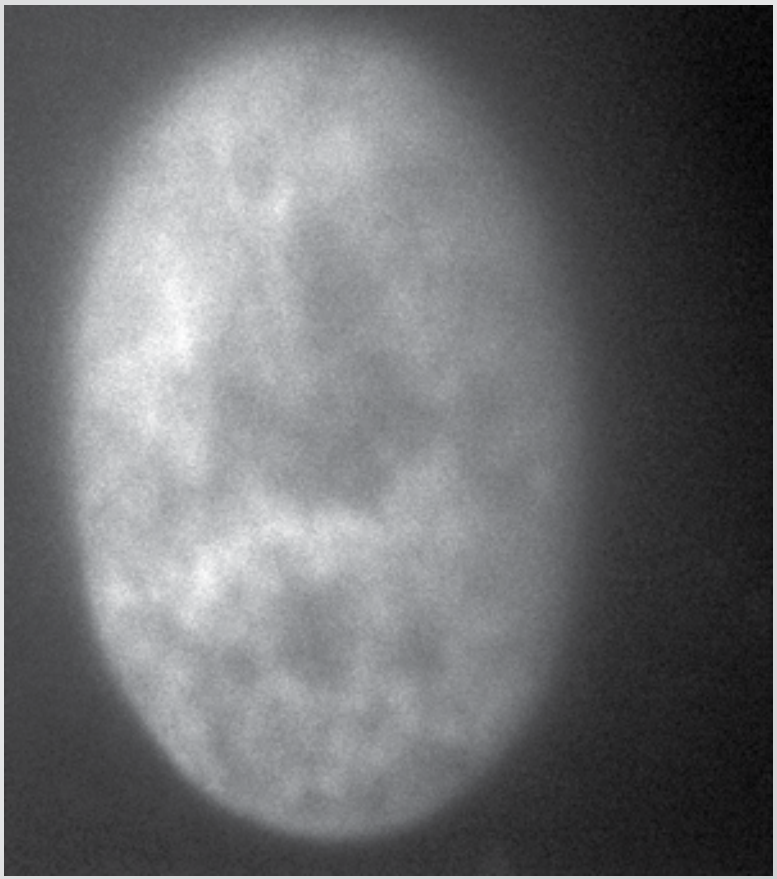
nucleus of fixed endothelial cell



white light microscopy

Subcellular surgery

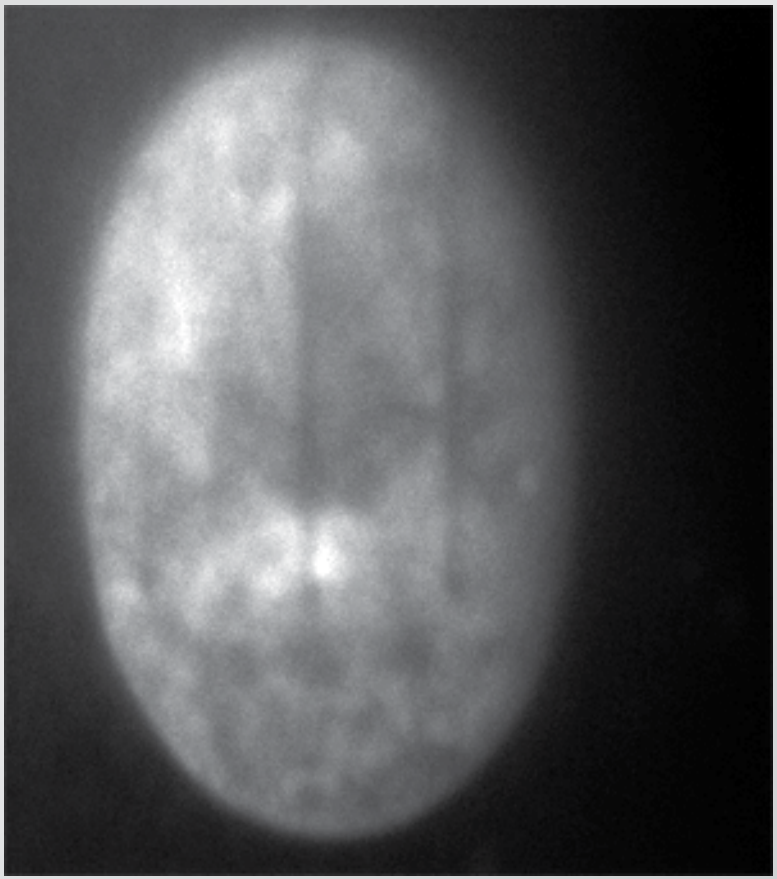
nucleus of fixed endothelial cell



fluorescence microscopy

Subcellular surgery

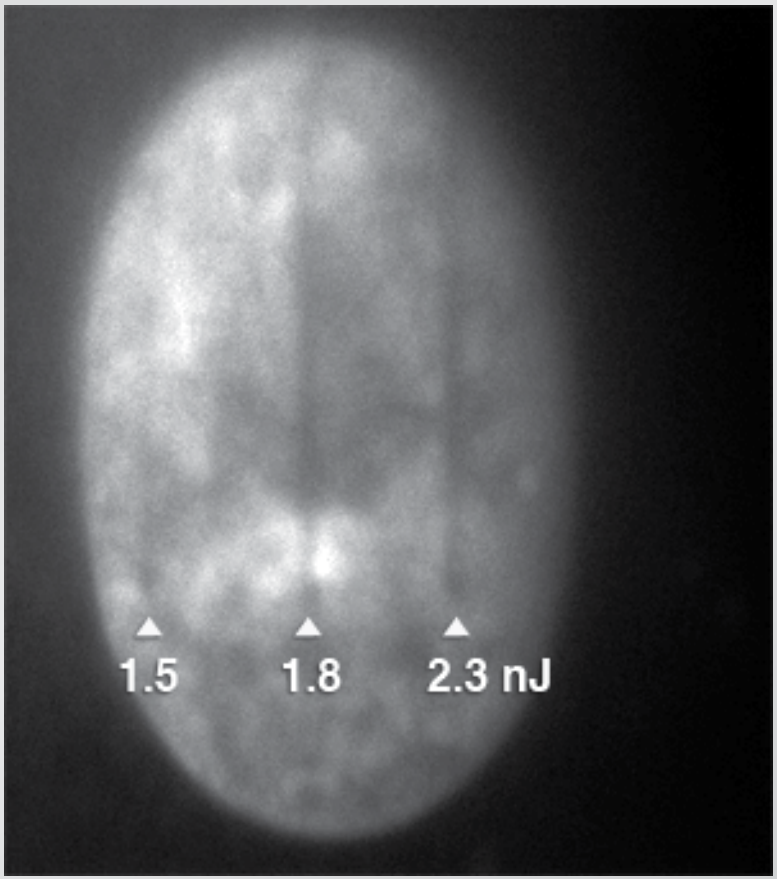
irradiate with fs laser



fluorescence microscopy

Subcellular surgery

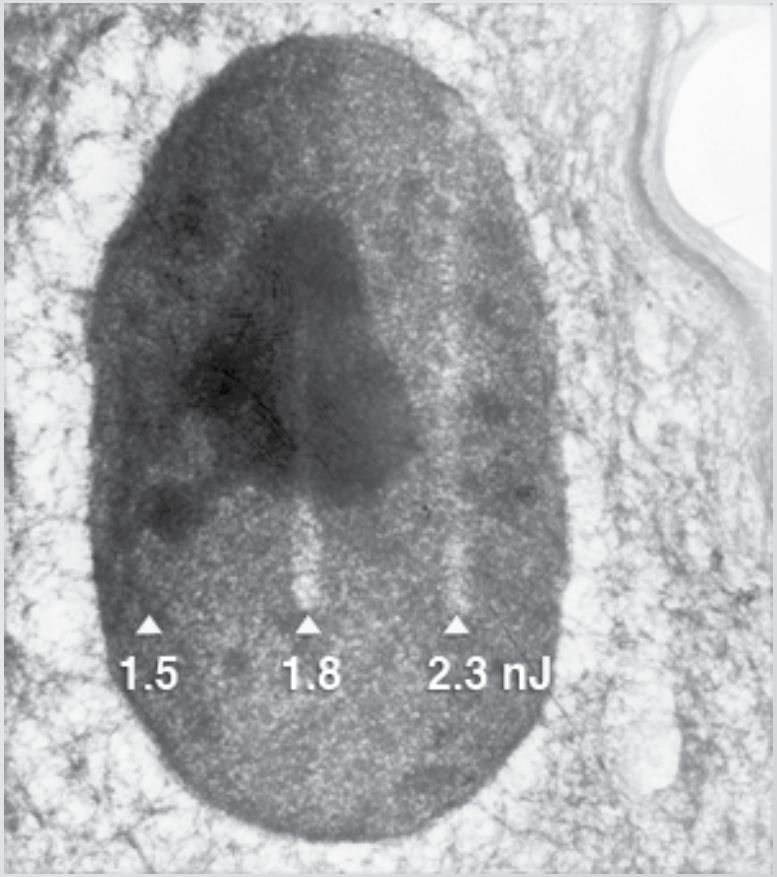
irradiate with fs laser



fluorescence microscopy

Subcellular surgery

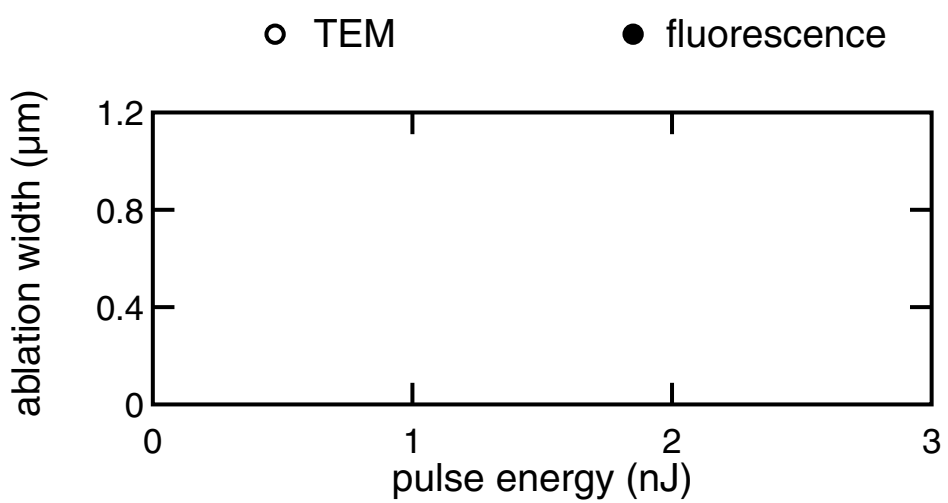
bleaching or ablation?



TEM image

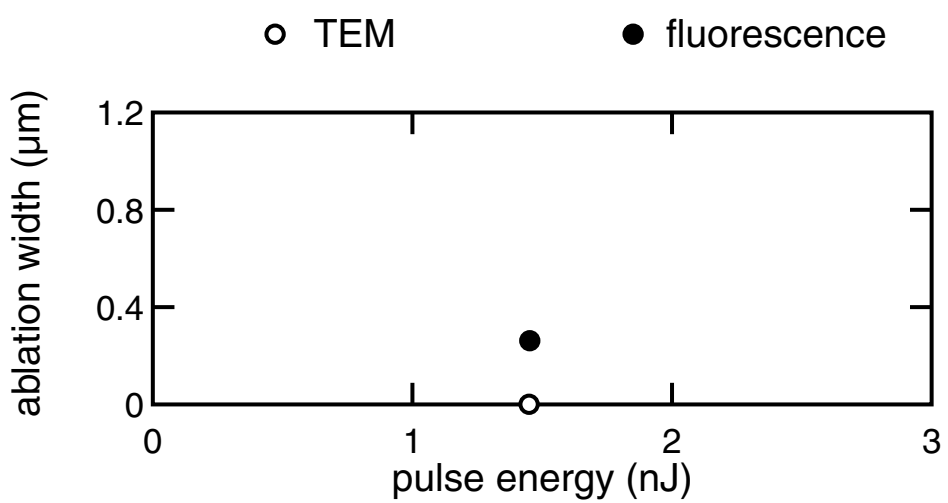
Subcellular surgery

three regions of interaction



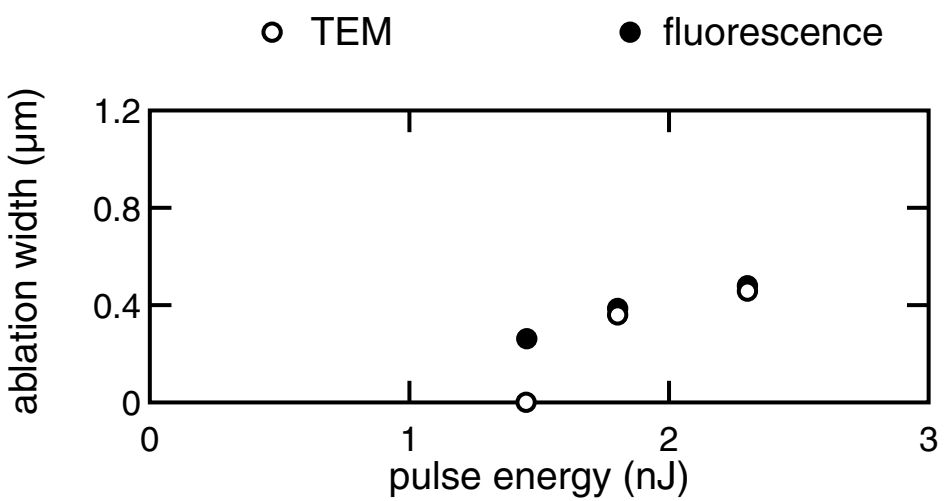
Subcellular surgery

three regions of interaction



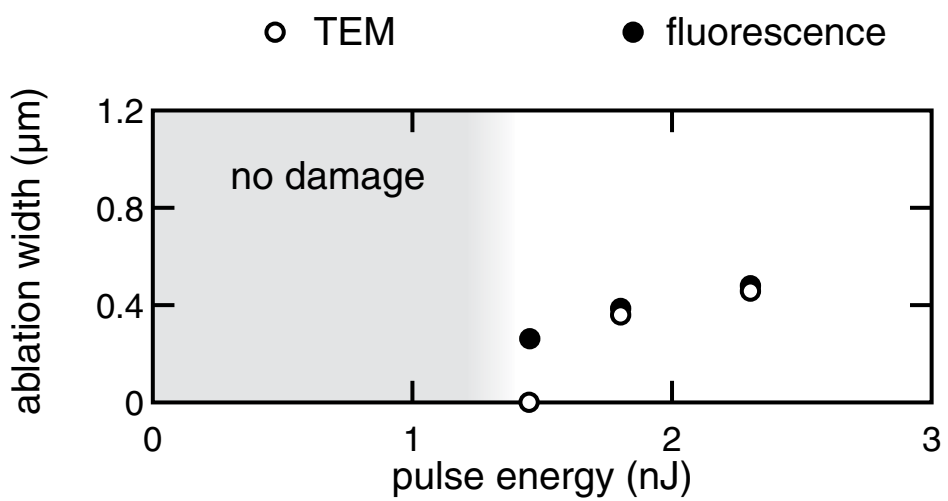
Subcellular surgery

three regions of interaction



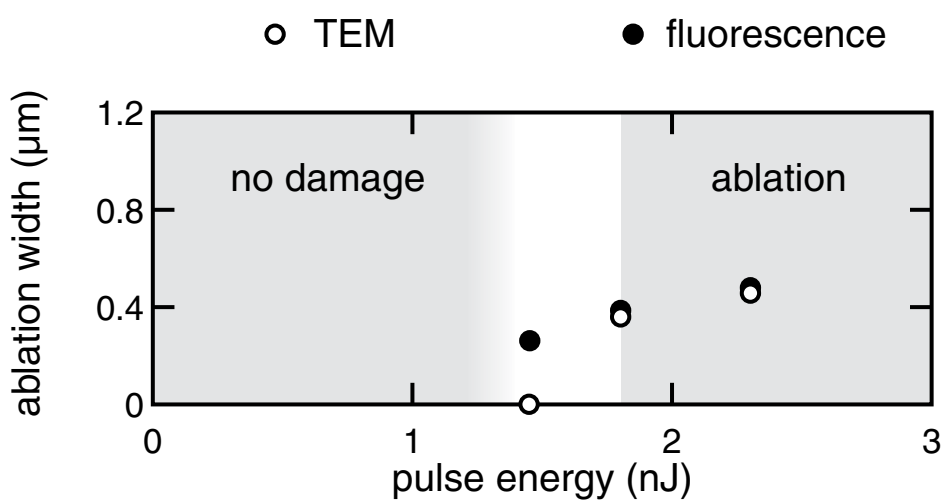
Subcellular surgery

three regions of interaction



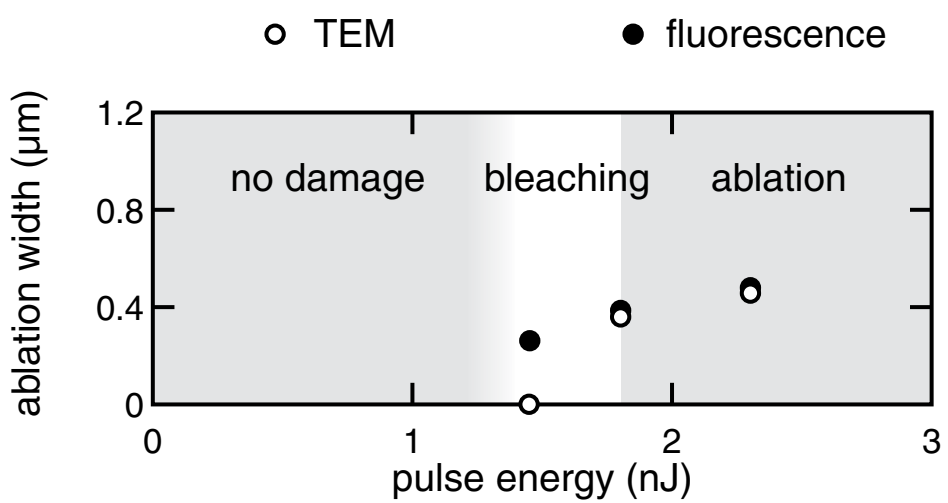
Subcellular surgery

three regions of interaction

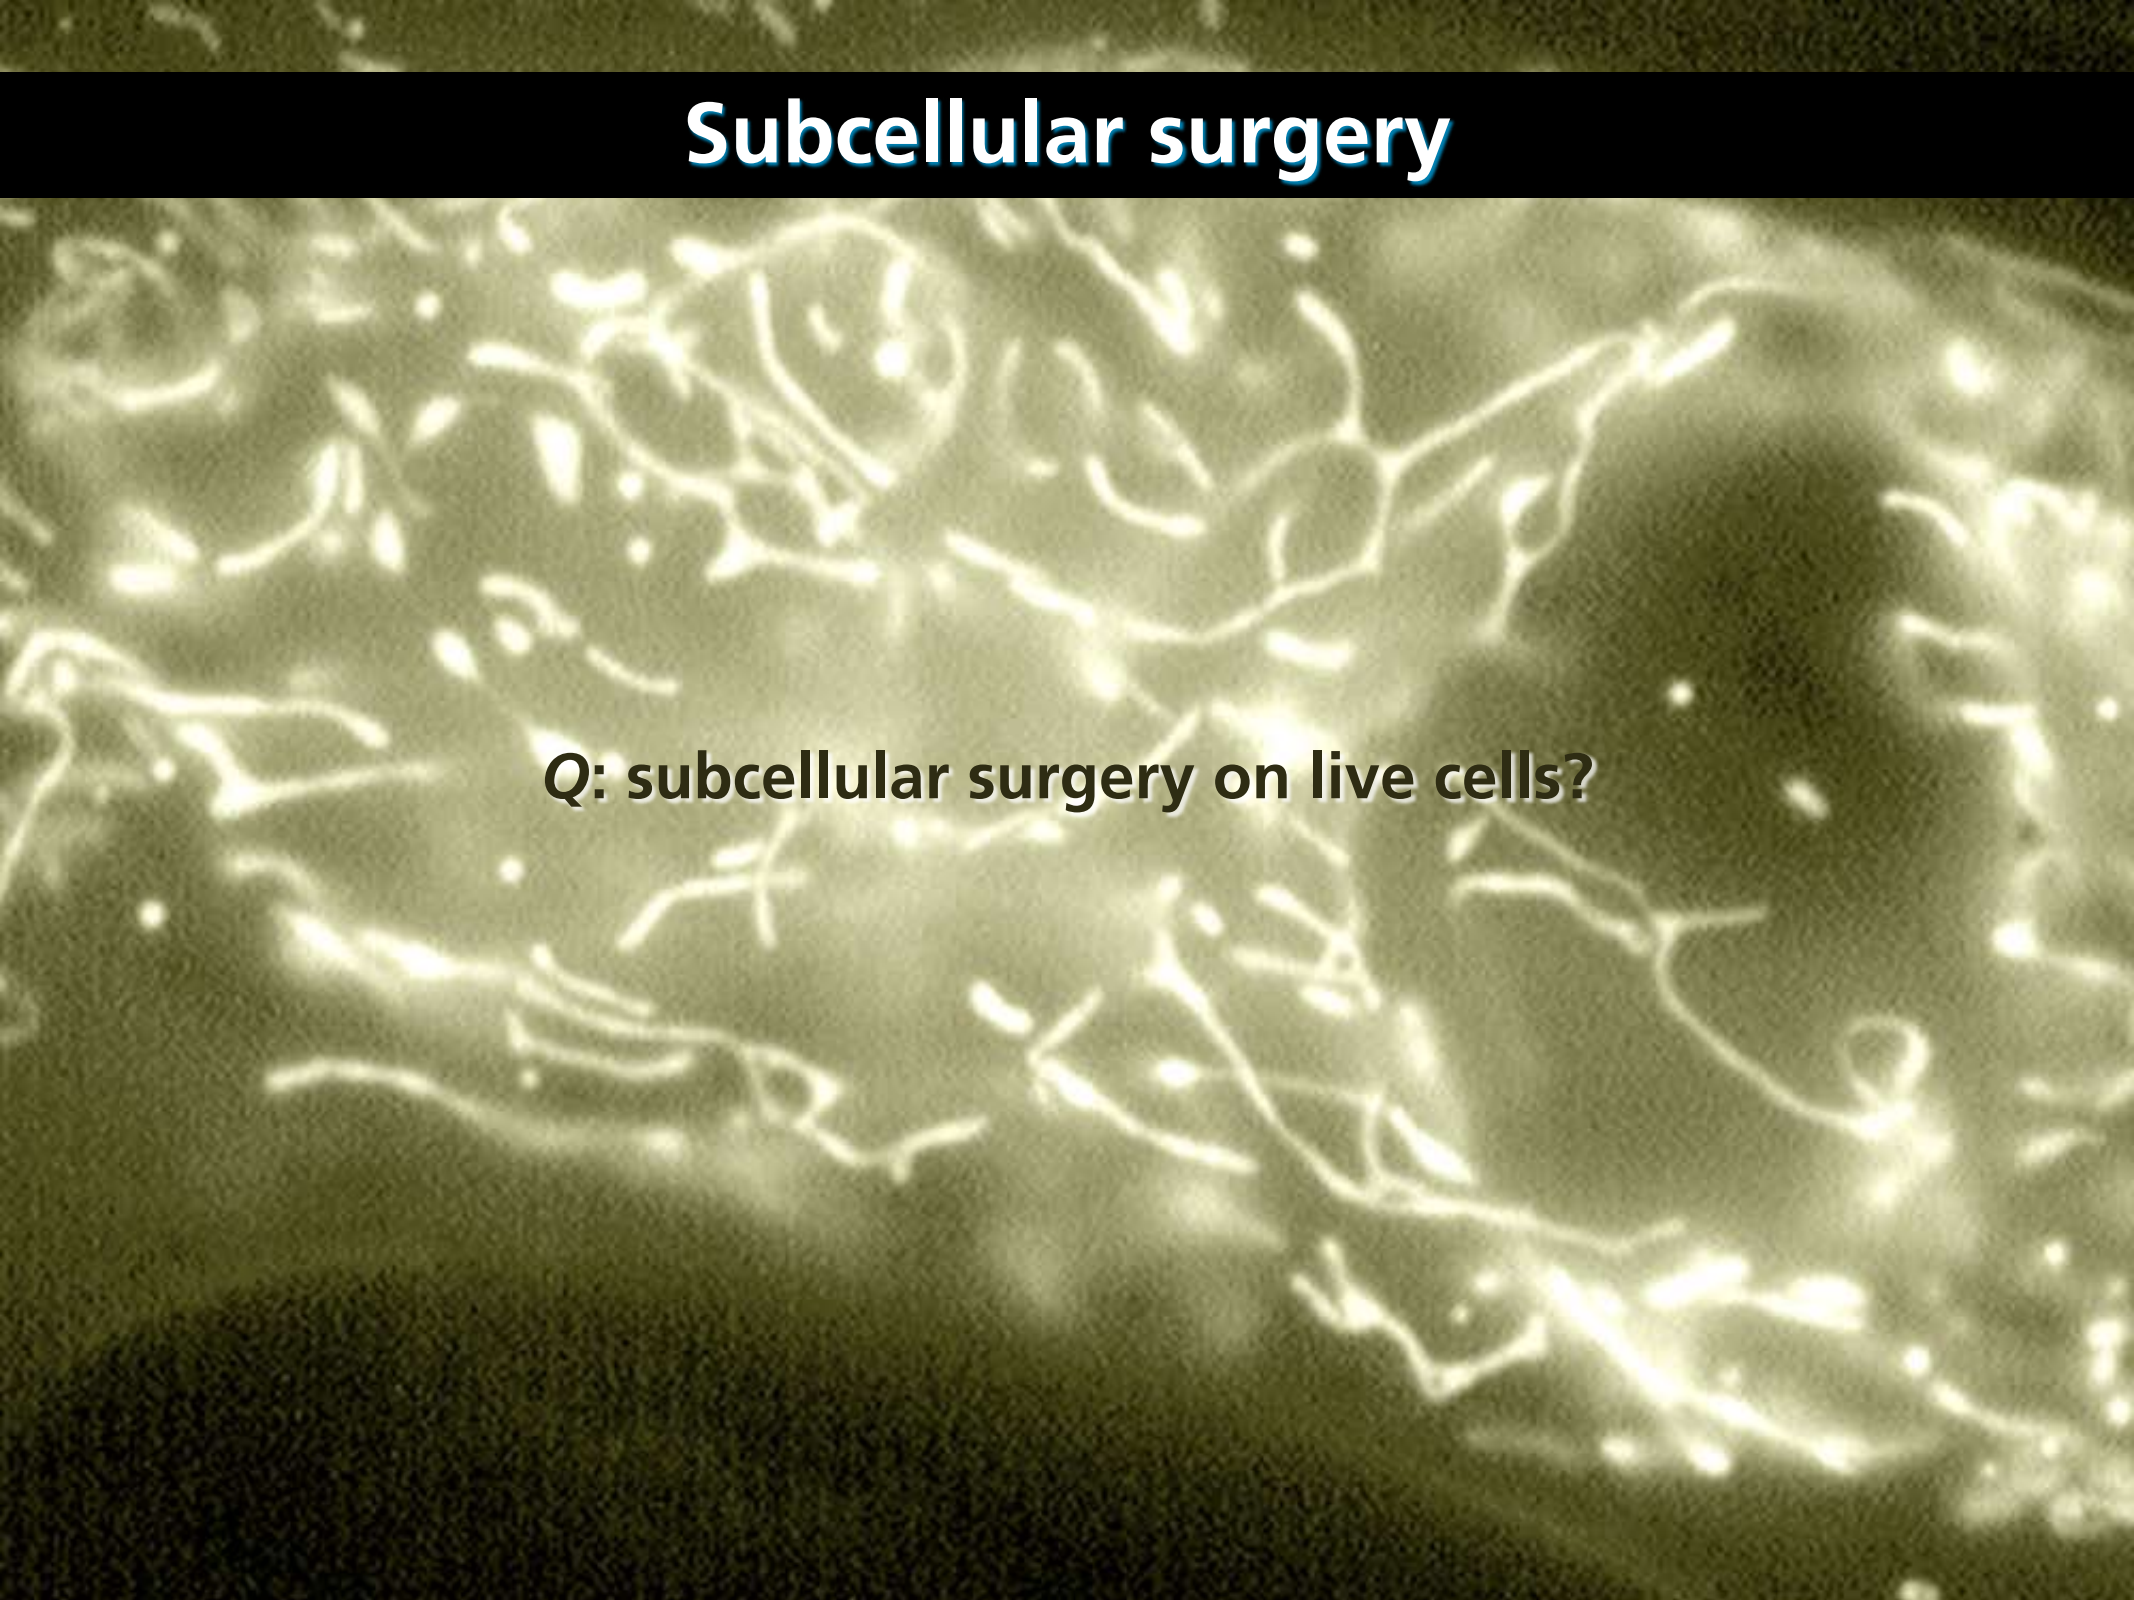


Subcellular surgery

three regions of interaction

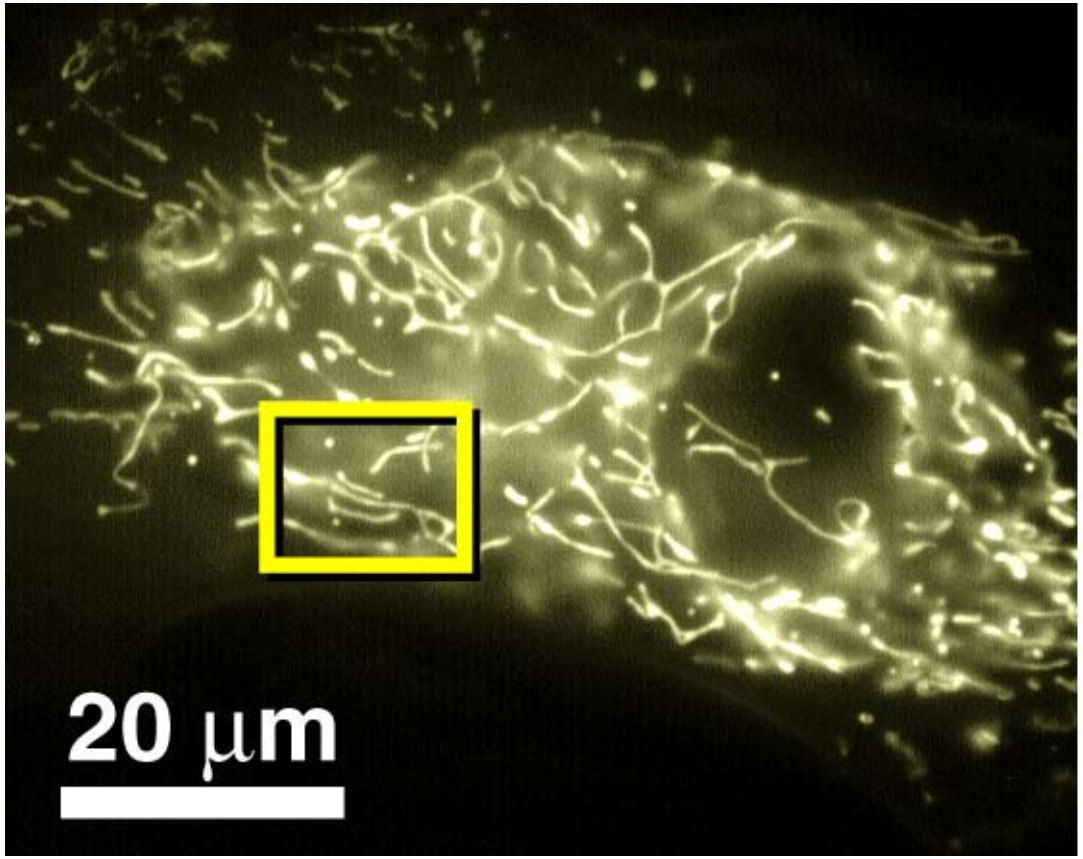


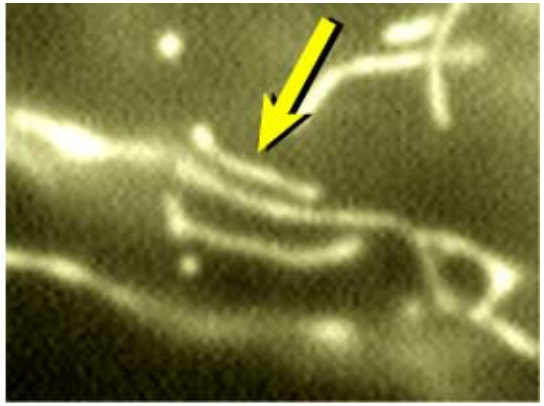
Subcellular surgery

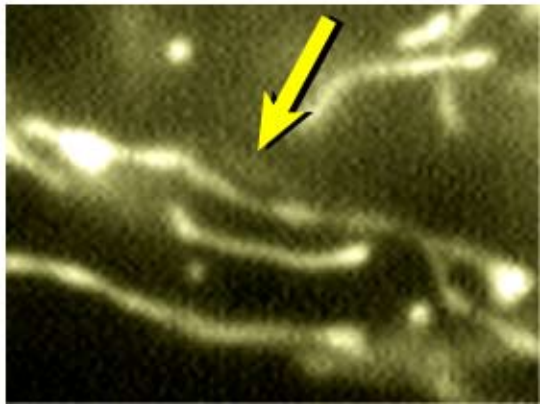


Q: subcellular surgery on live cells?

Subcellular surgery

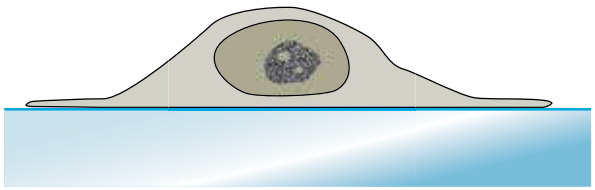


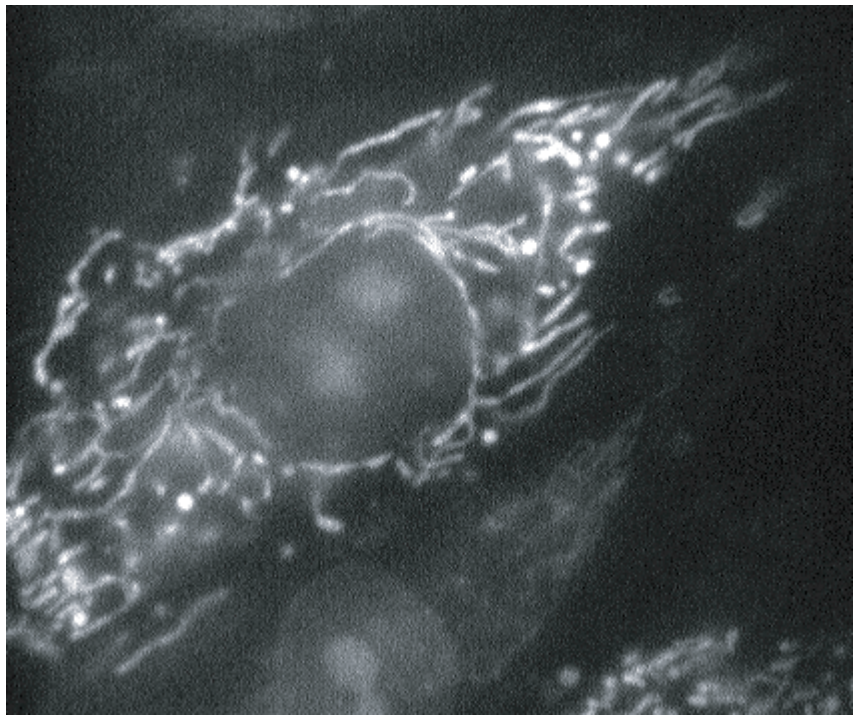




Subcellular surgery

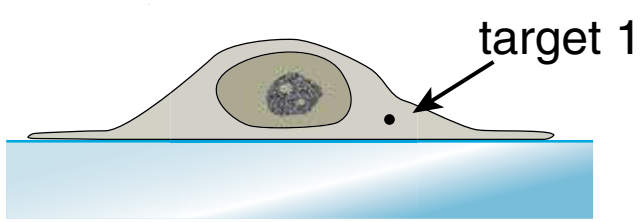
ethydium bromide test

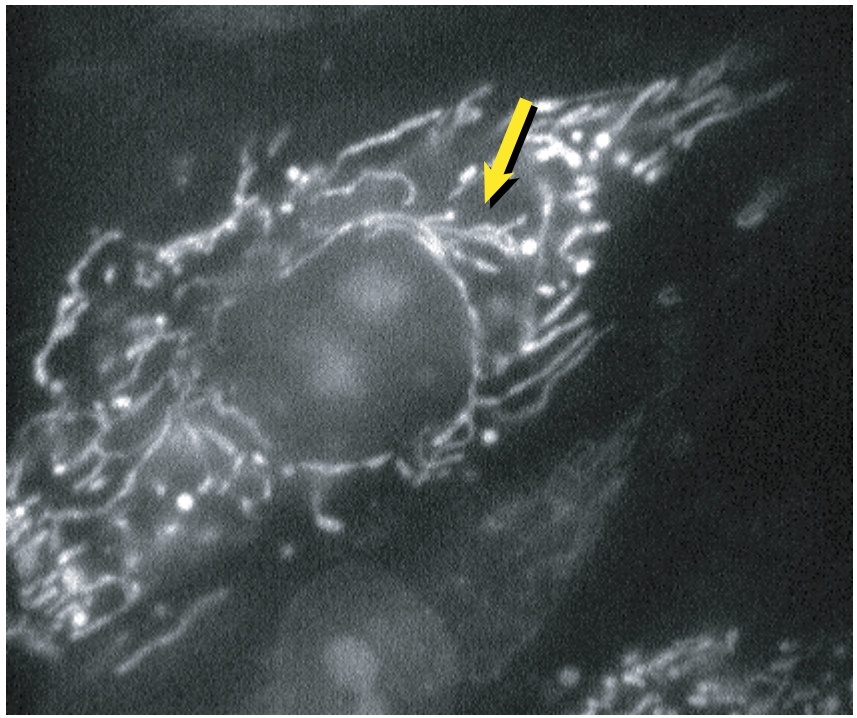




Subcellular surgery

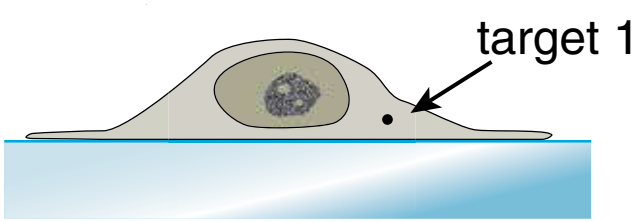
ethydium bromide test

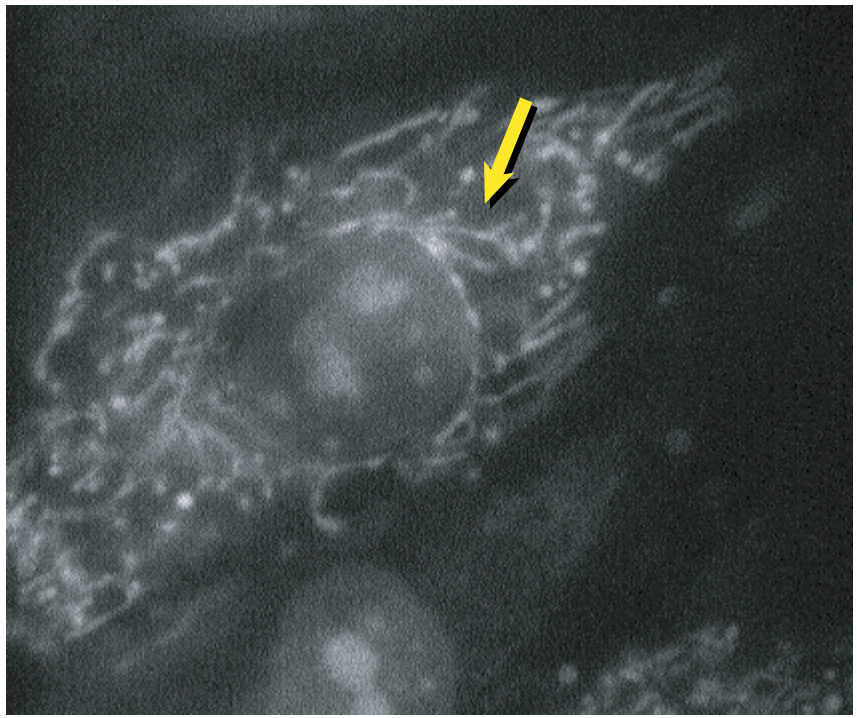




Subcellular surgery

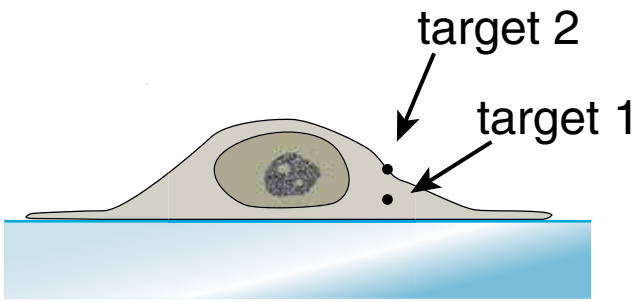
ethydium bromide test

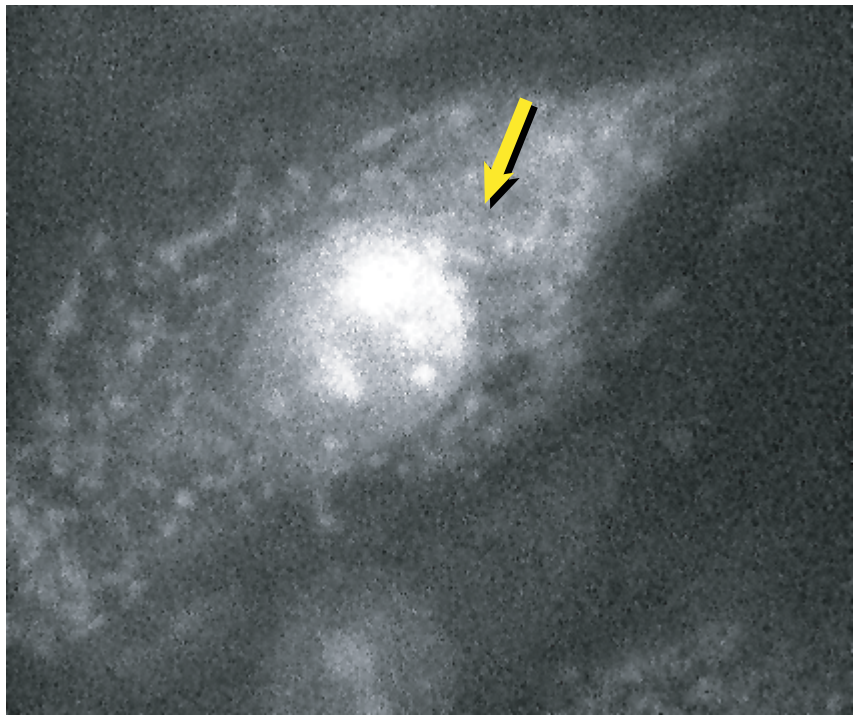




Subcellular surgery

ethydium bromide test



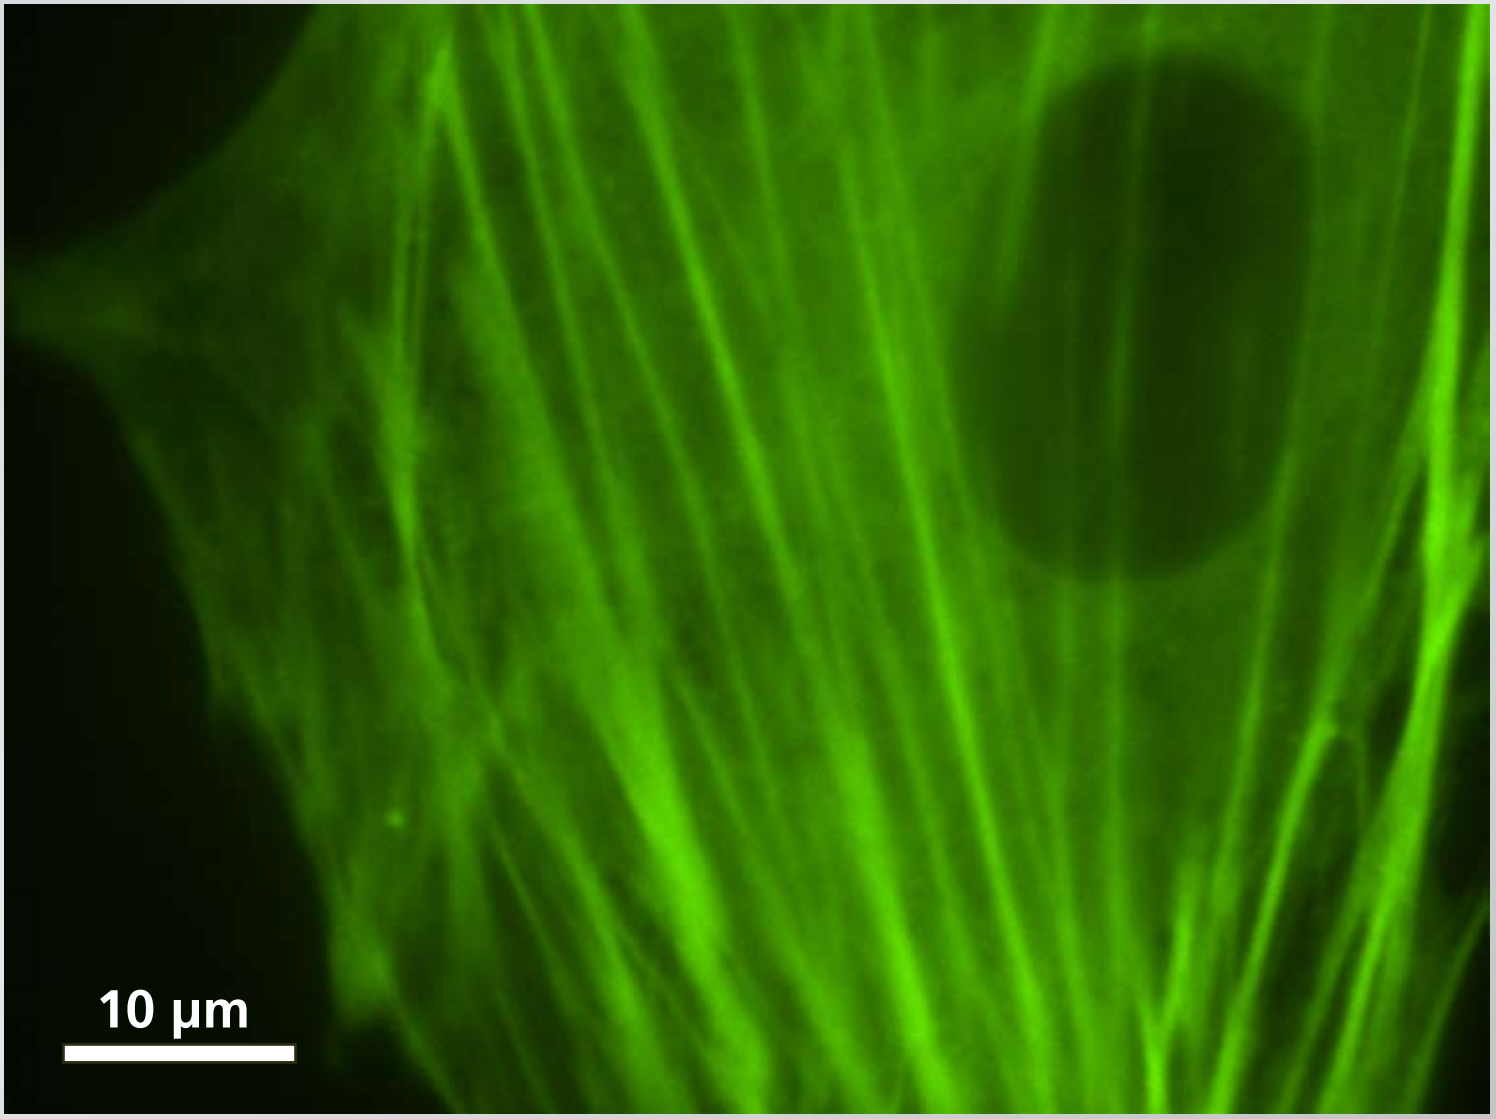


Subcellular surgery

Q: can we probe the dynamics of the cytoskeleton?

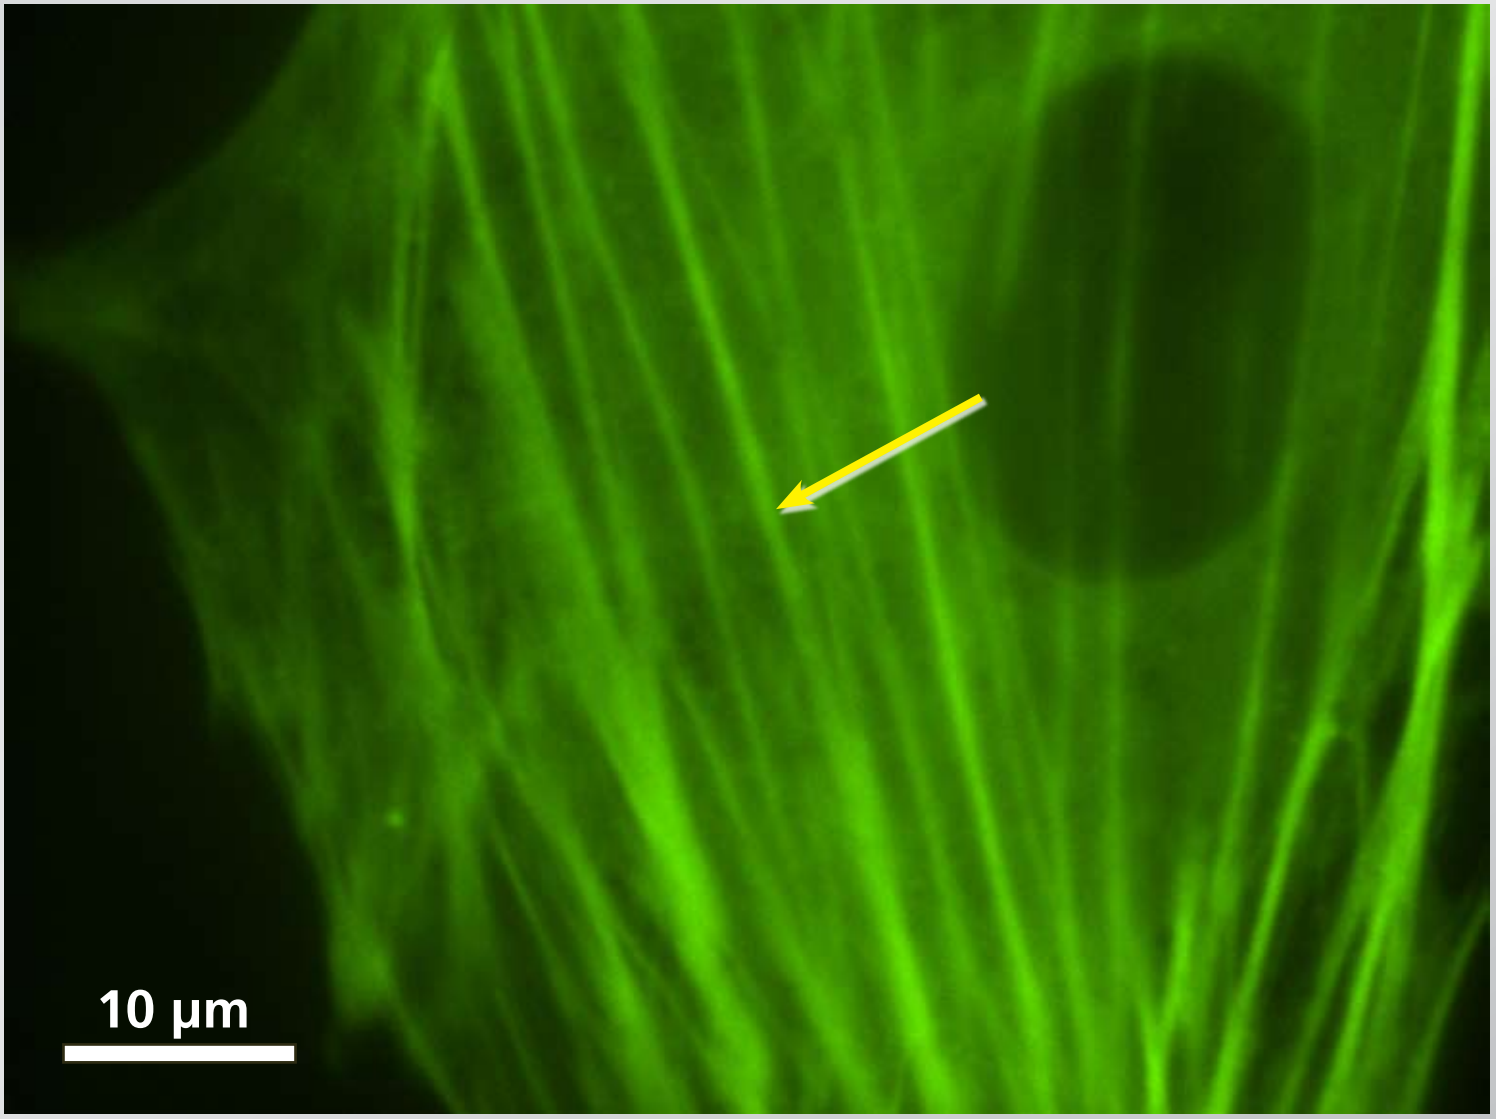
Subcellular surgery

YFP-labeled actin fiber network of a live cell



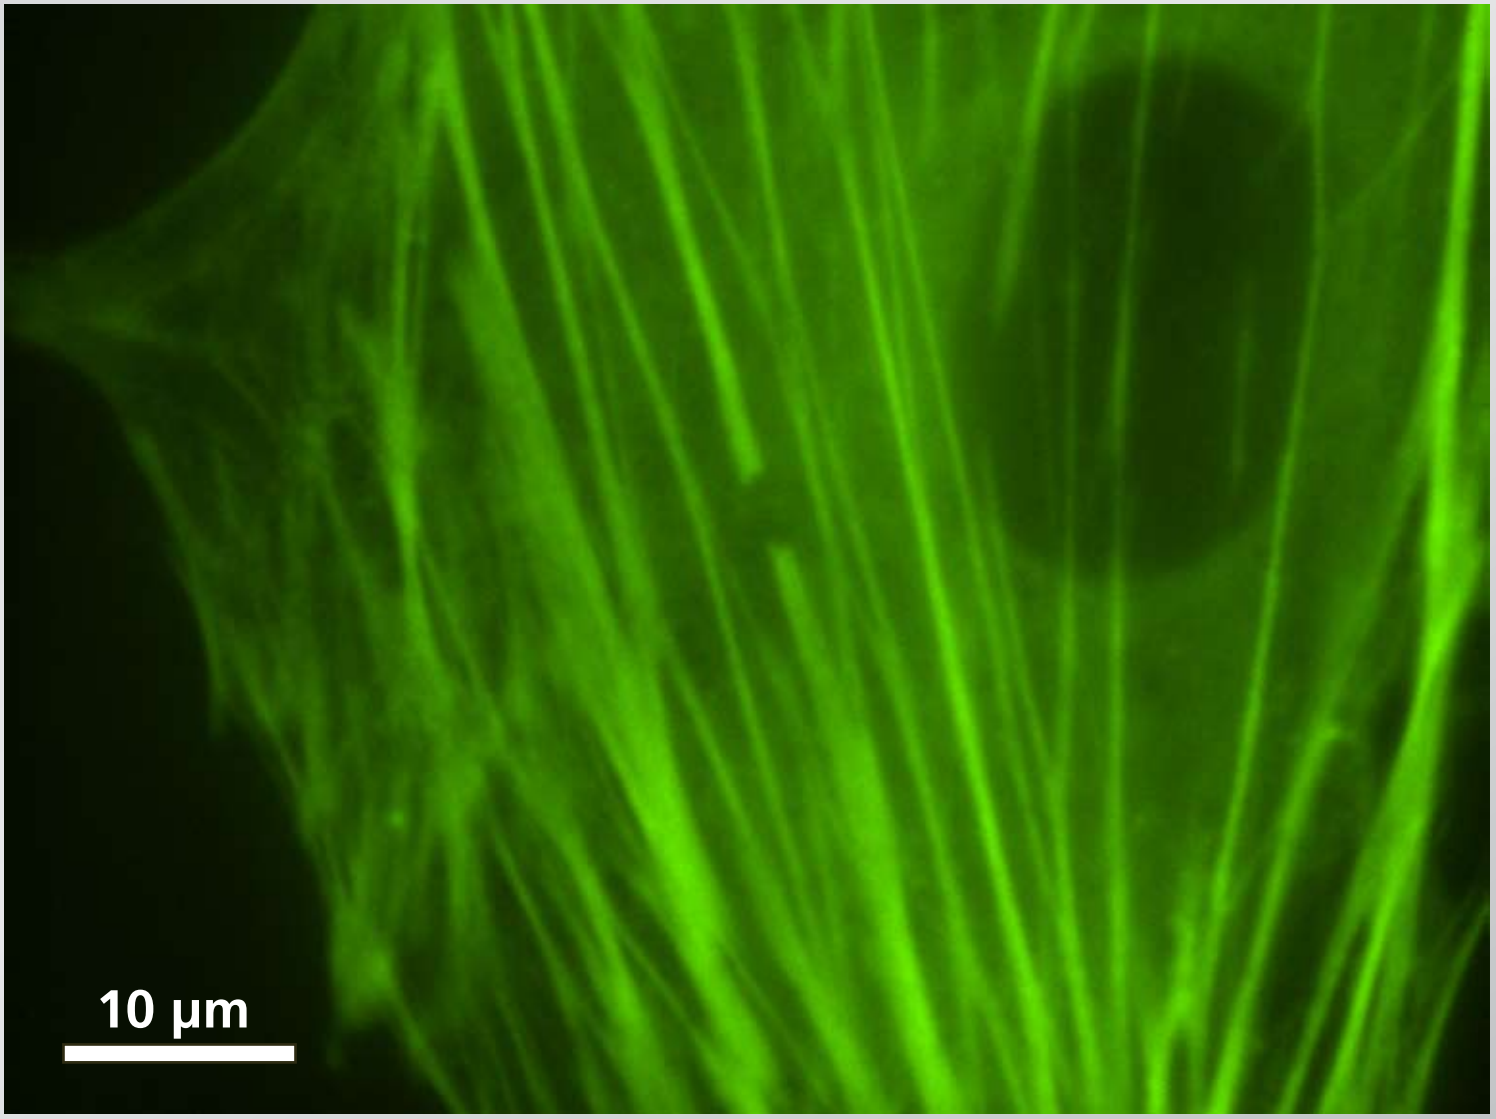
Subcellular surgery

cut a single fiber bundle



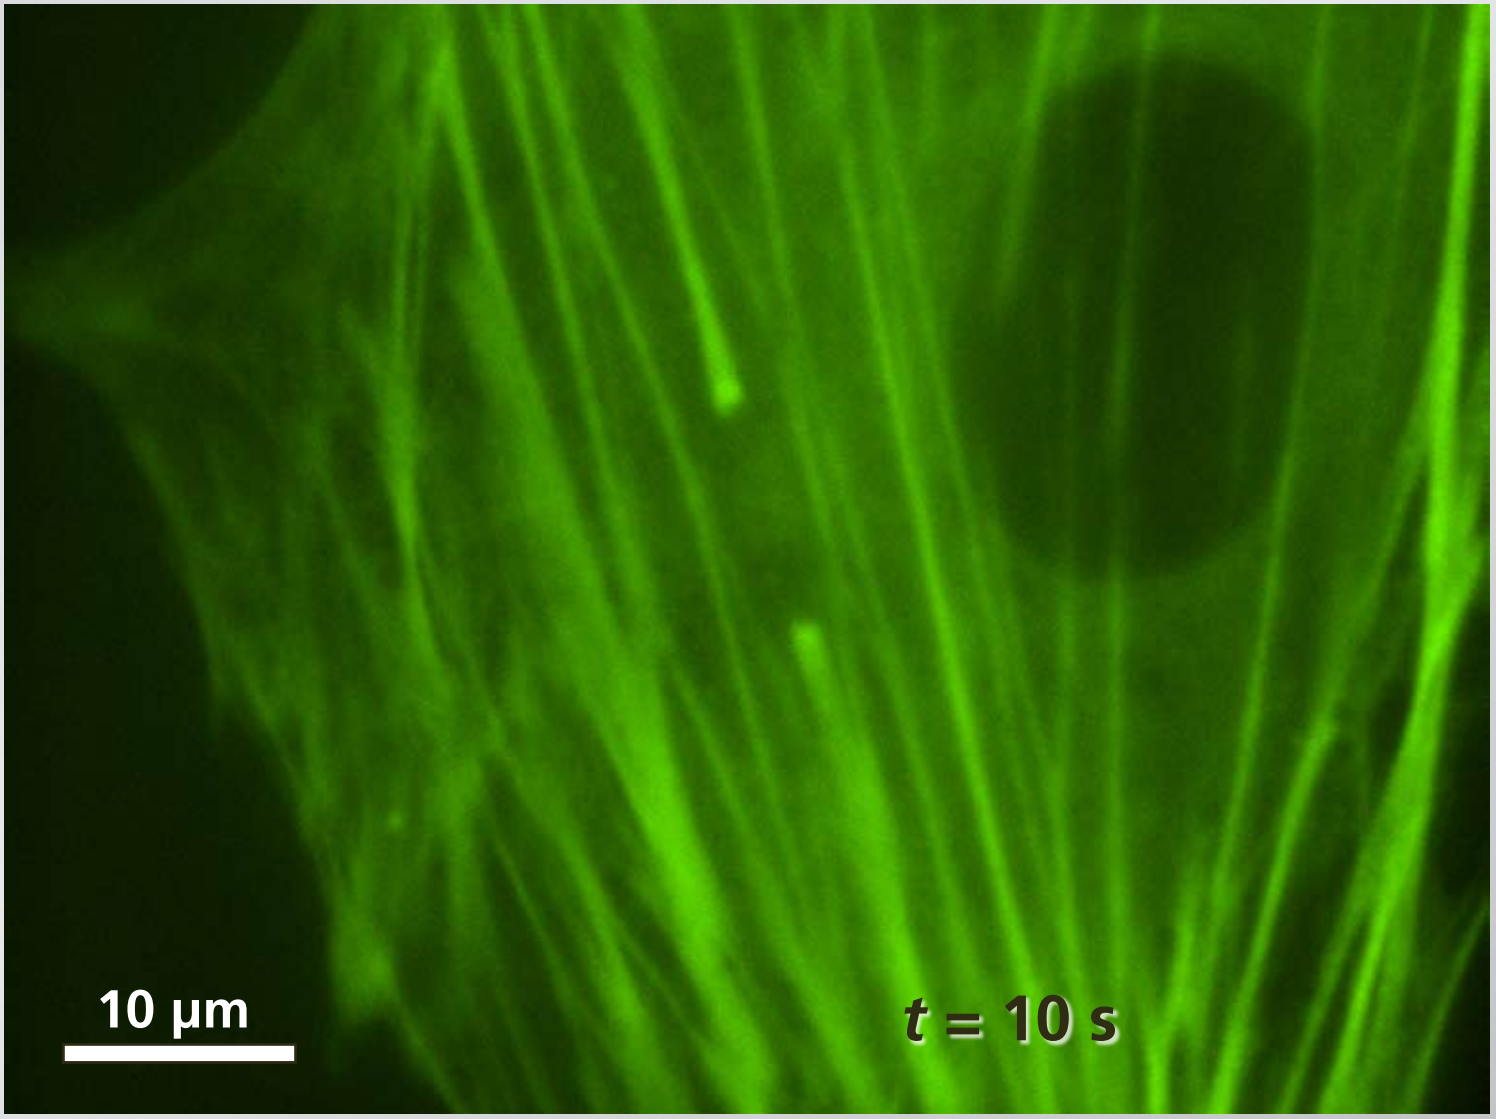
Subcellular surgery

cut a single fiber bundle



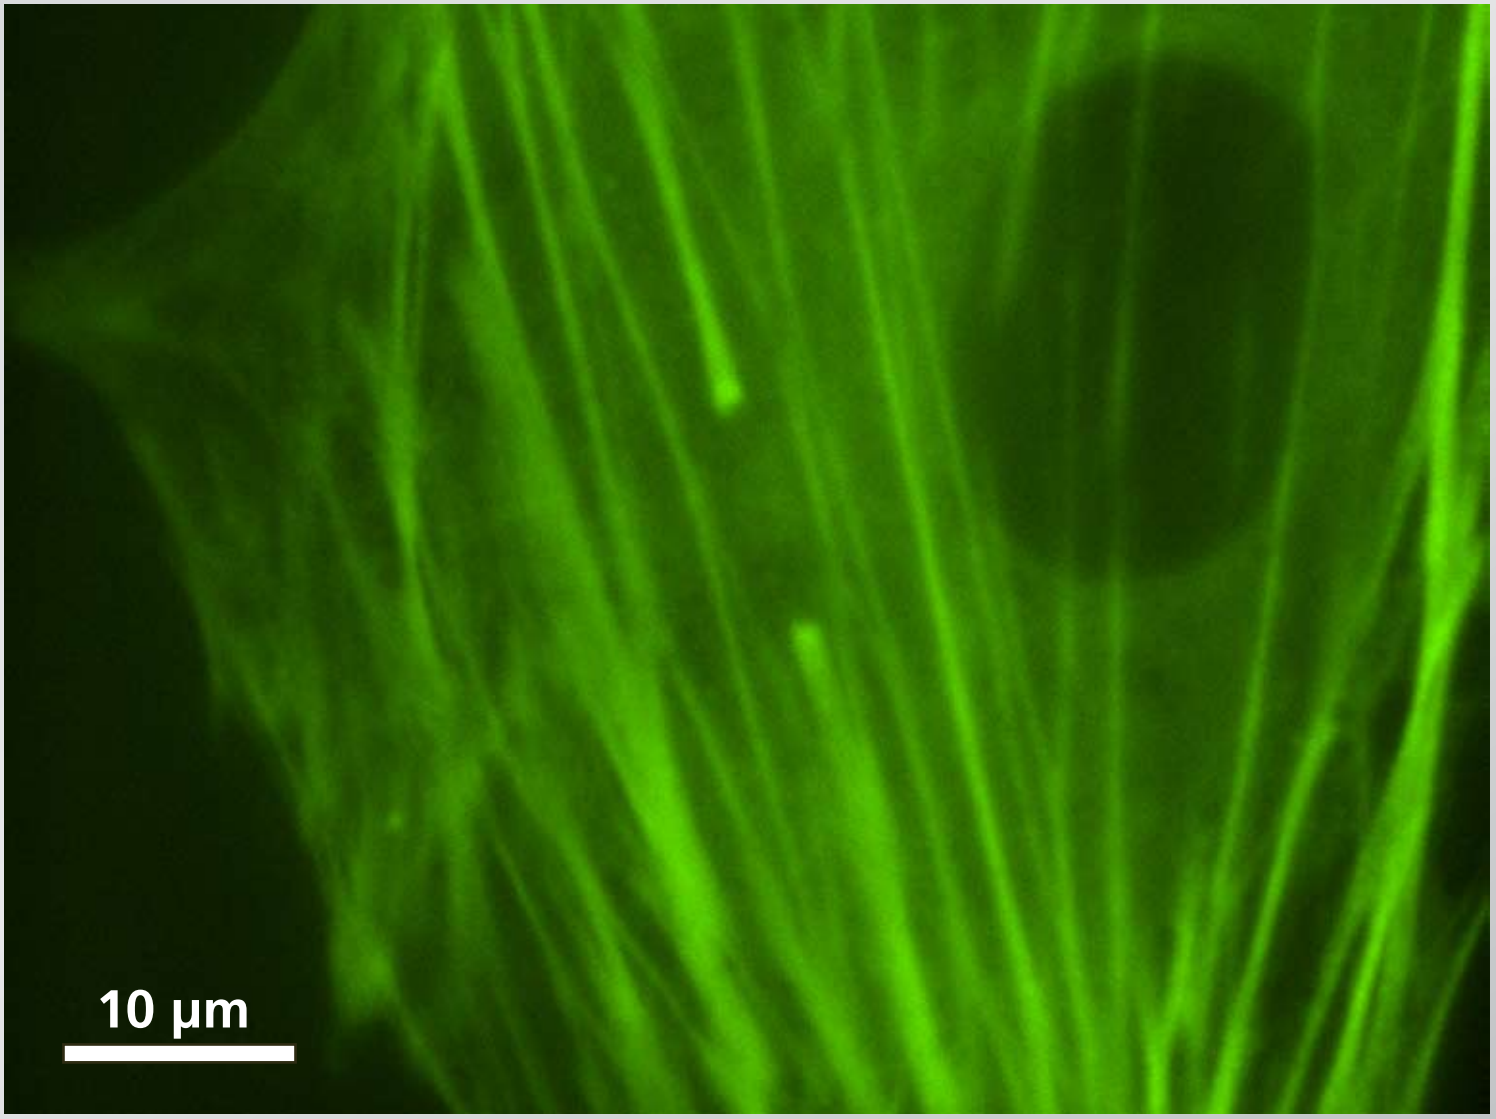
Subcellular surgery

gap widens with time



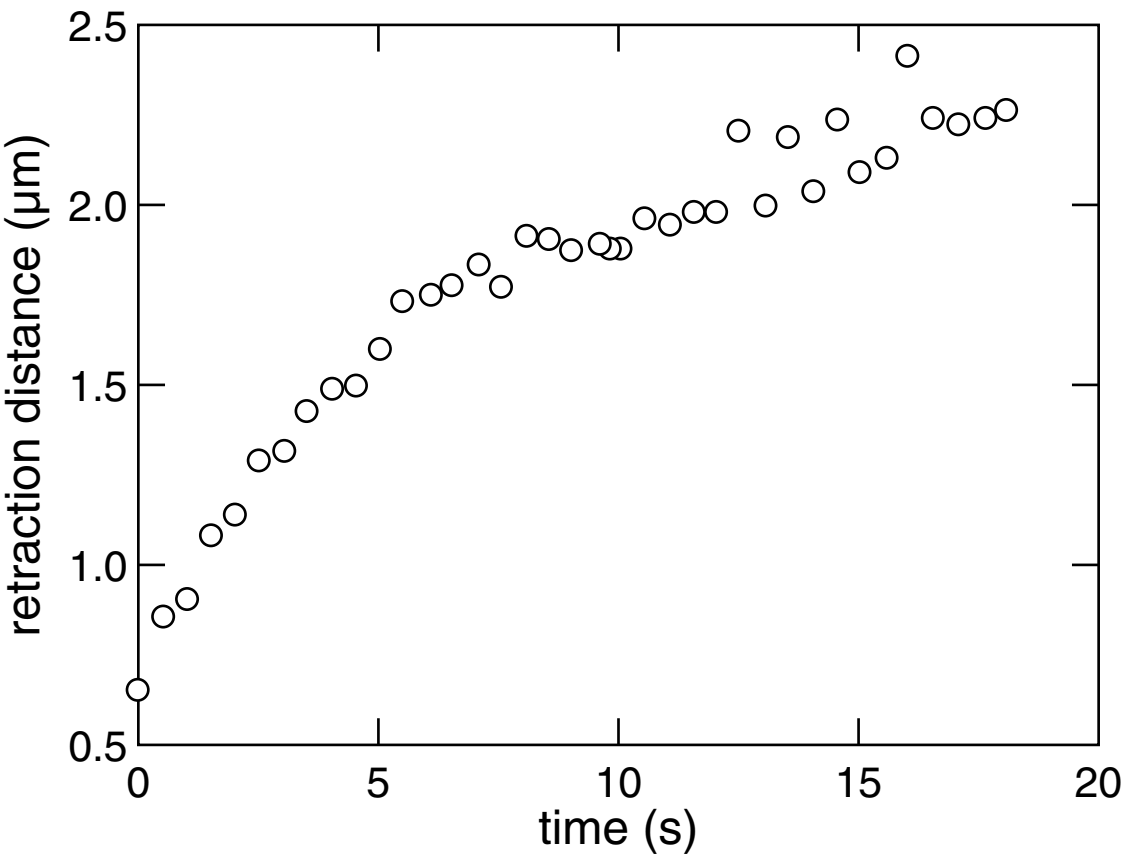
Subcellular surgery

dynamics provides information on *in vivo* mechanics



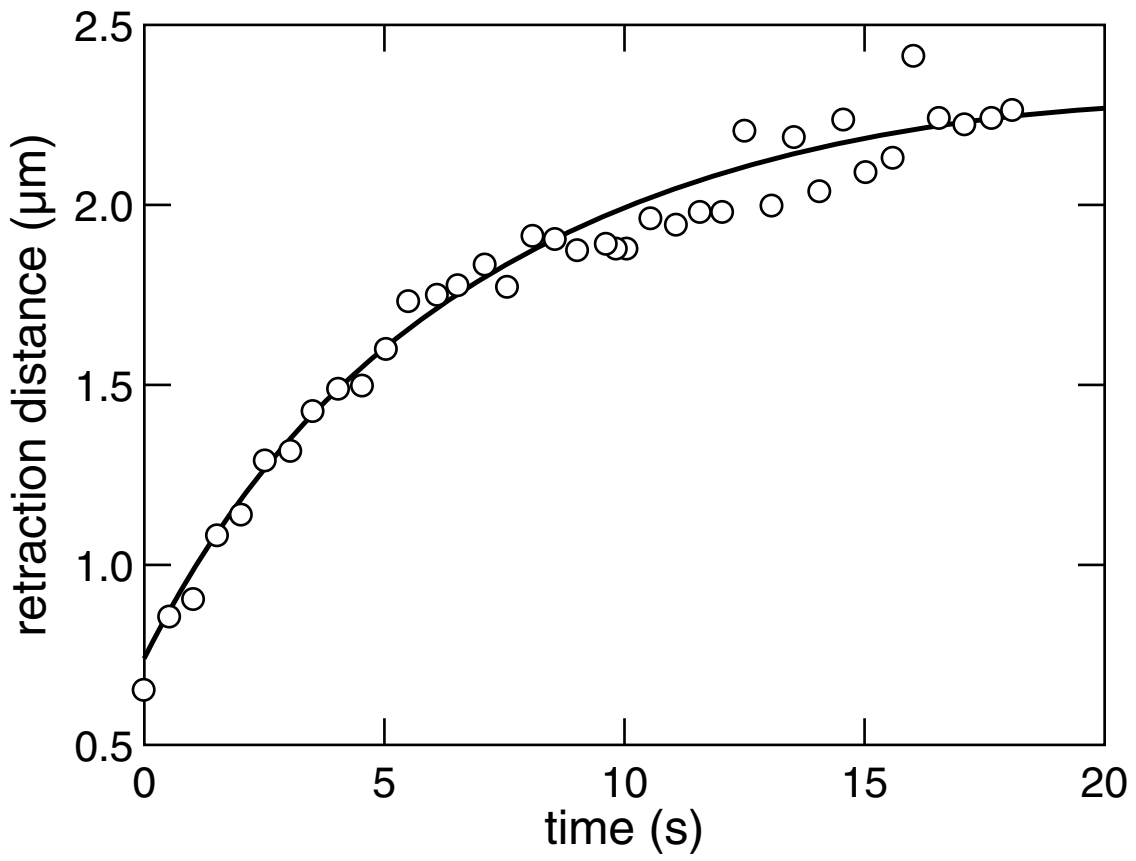
Subcellular surgery

overdamped spring: $\Delta L = L_\infty(1 - e^{-t/\tau}) + L_o$



Subcellular surgery

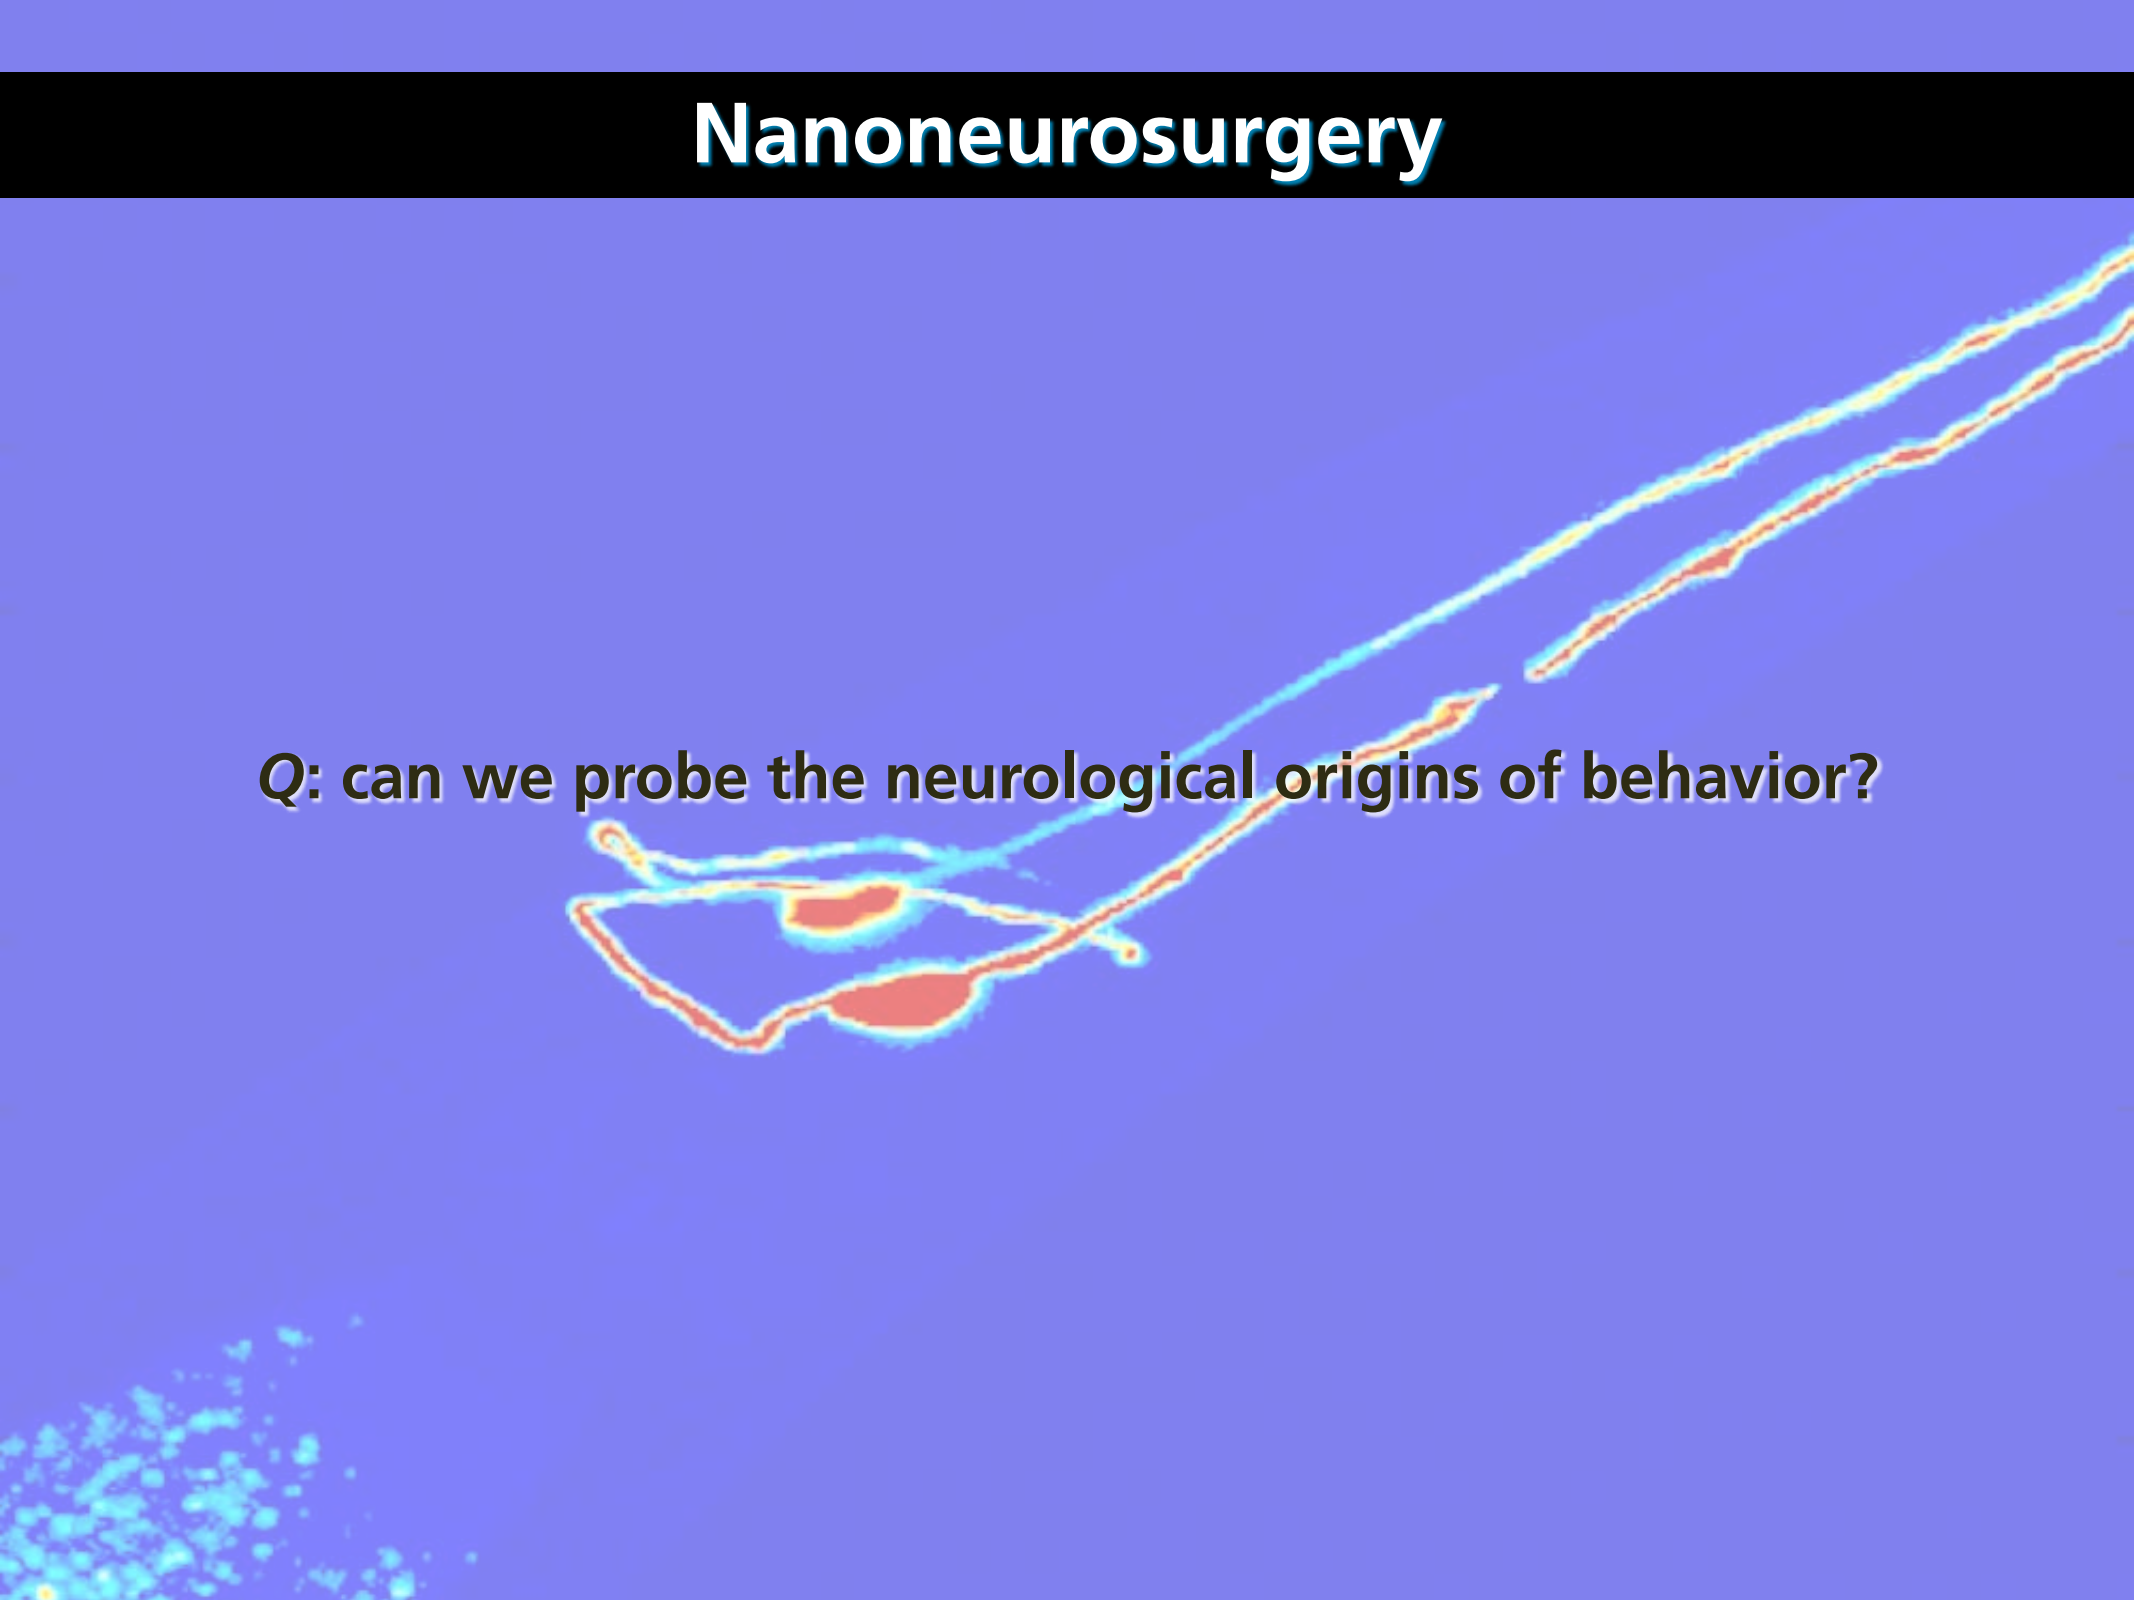
overdamped spring: $\Delta L = L_\infty(1 - e^{-t/\tau}) + L_o$



Outline

- femtosecond micromachining
- subcellular surgery
- nanoneurosurgery

Nanoneurosurgery



Q: can we probe the neurological origins of behavior?

Nanoneurosurgery

Caenorhabditis elegans

Juergen Berger & Ralph Sommer
Max-Planck Institute for Developmental Biology

Nanoneurosurgery

Caenorhabditis elegans

- simple model organism
- similarities to higher organisms
- genome fully sequenced
- easy to handle

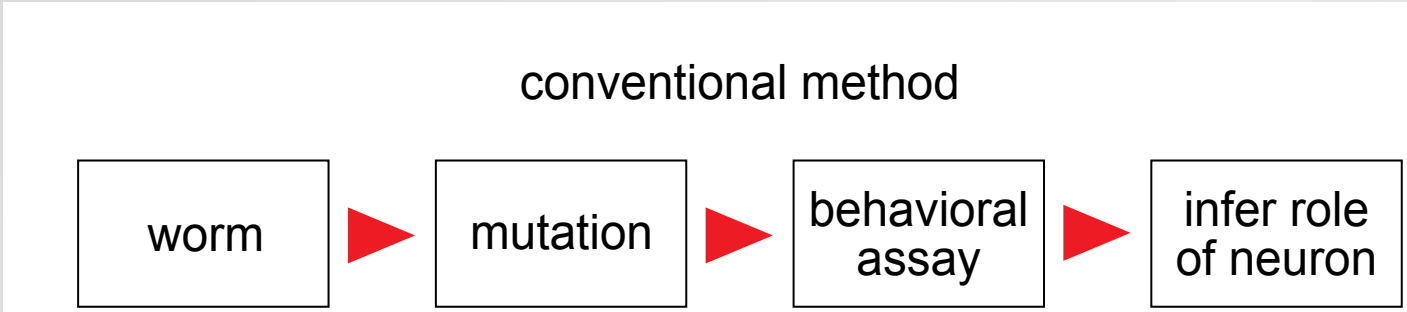
Nanoneurosurgery

Caenorhabditis elegans

- 80 µm x 1 mm
- about 1300 cells
- 302 neurons
- invariant wiring diagram
- neuronal system completely encodes behavior

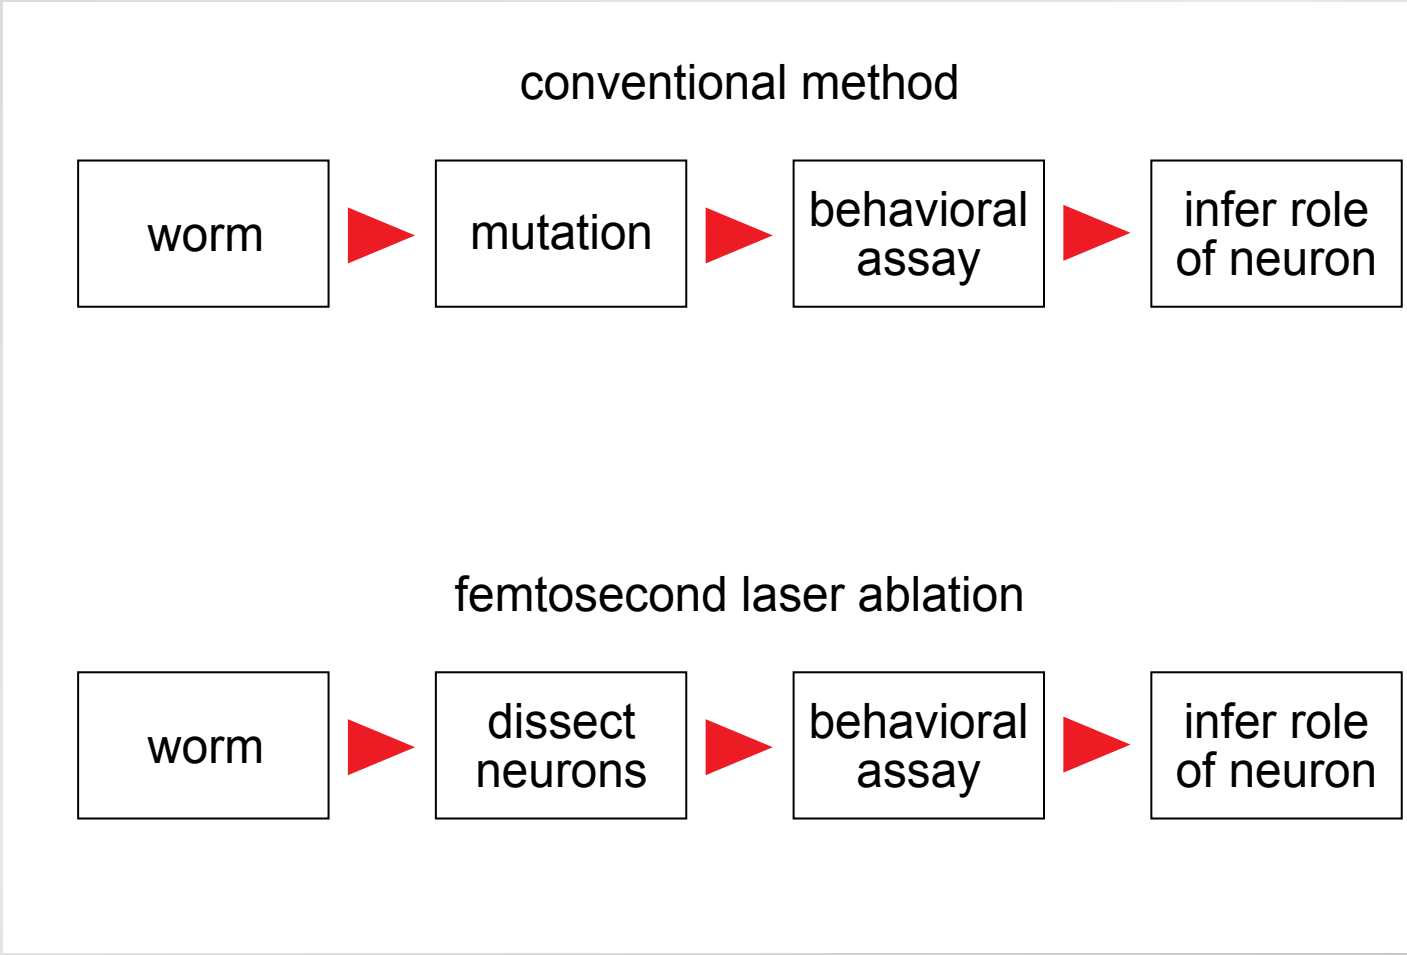
Nanoneurosurgery

Mapping behavior to neurons



Nanoneurosurgery

Mapping behavior to neurons



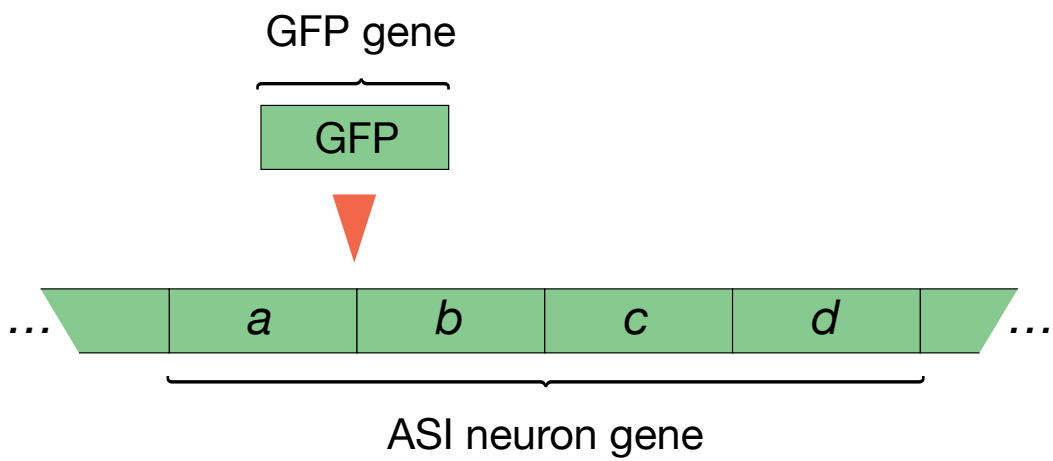
Nanoneurosurgery

ASI neurons

- responsible for chemical sensing
- ciliary projections extend through skin
- one on each side

Nanoneurosurgery

Make ASI neurons express GFP

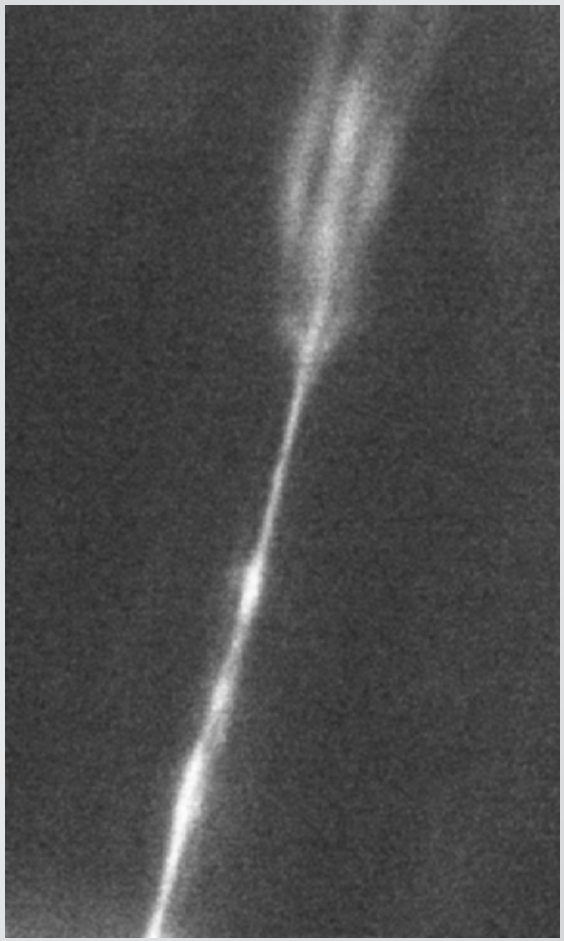


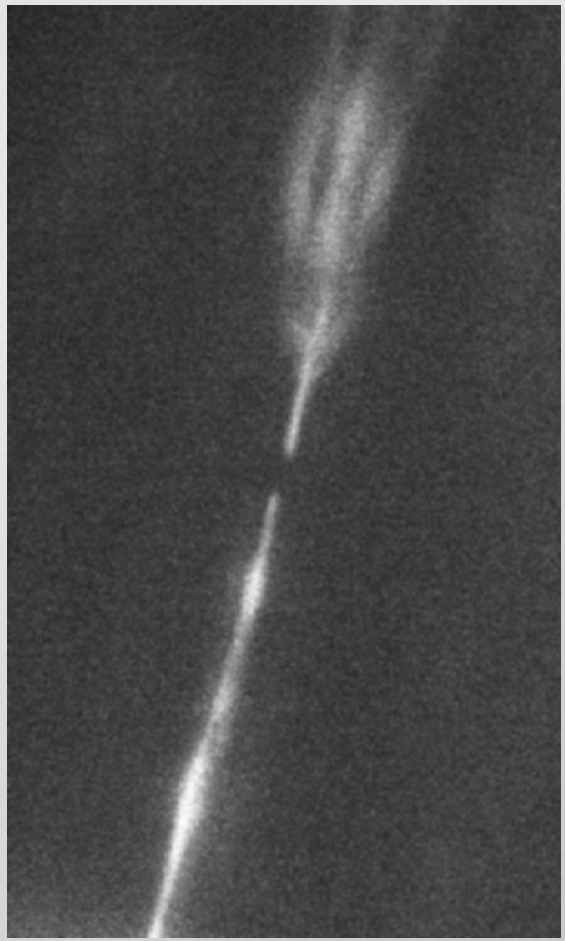
Nanoneurosurgery

GFP: absorbs UV, emits green

Nanoneurosurgery

minutes after surgery with 14 nJ pulses

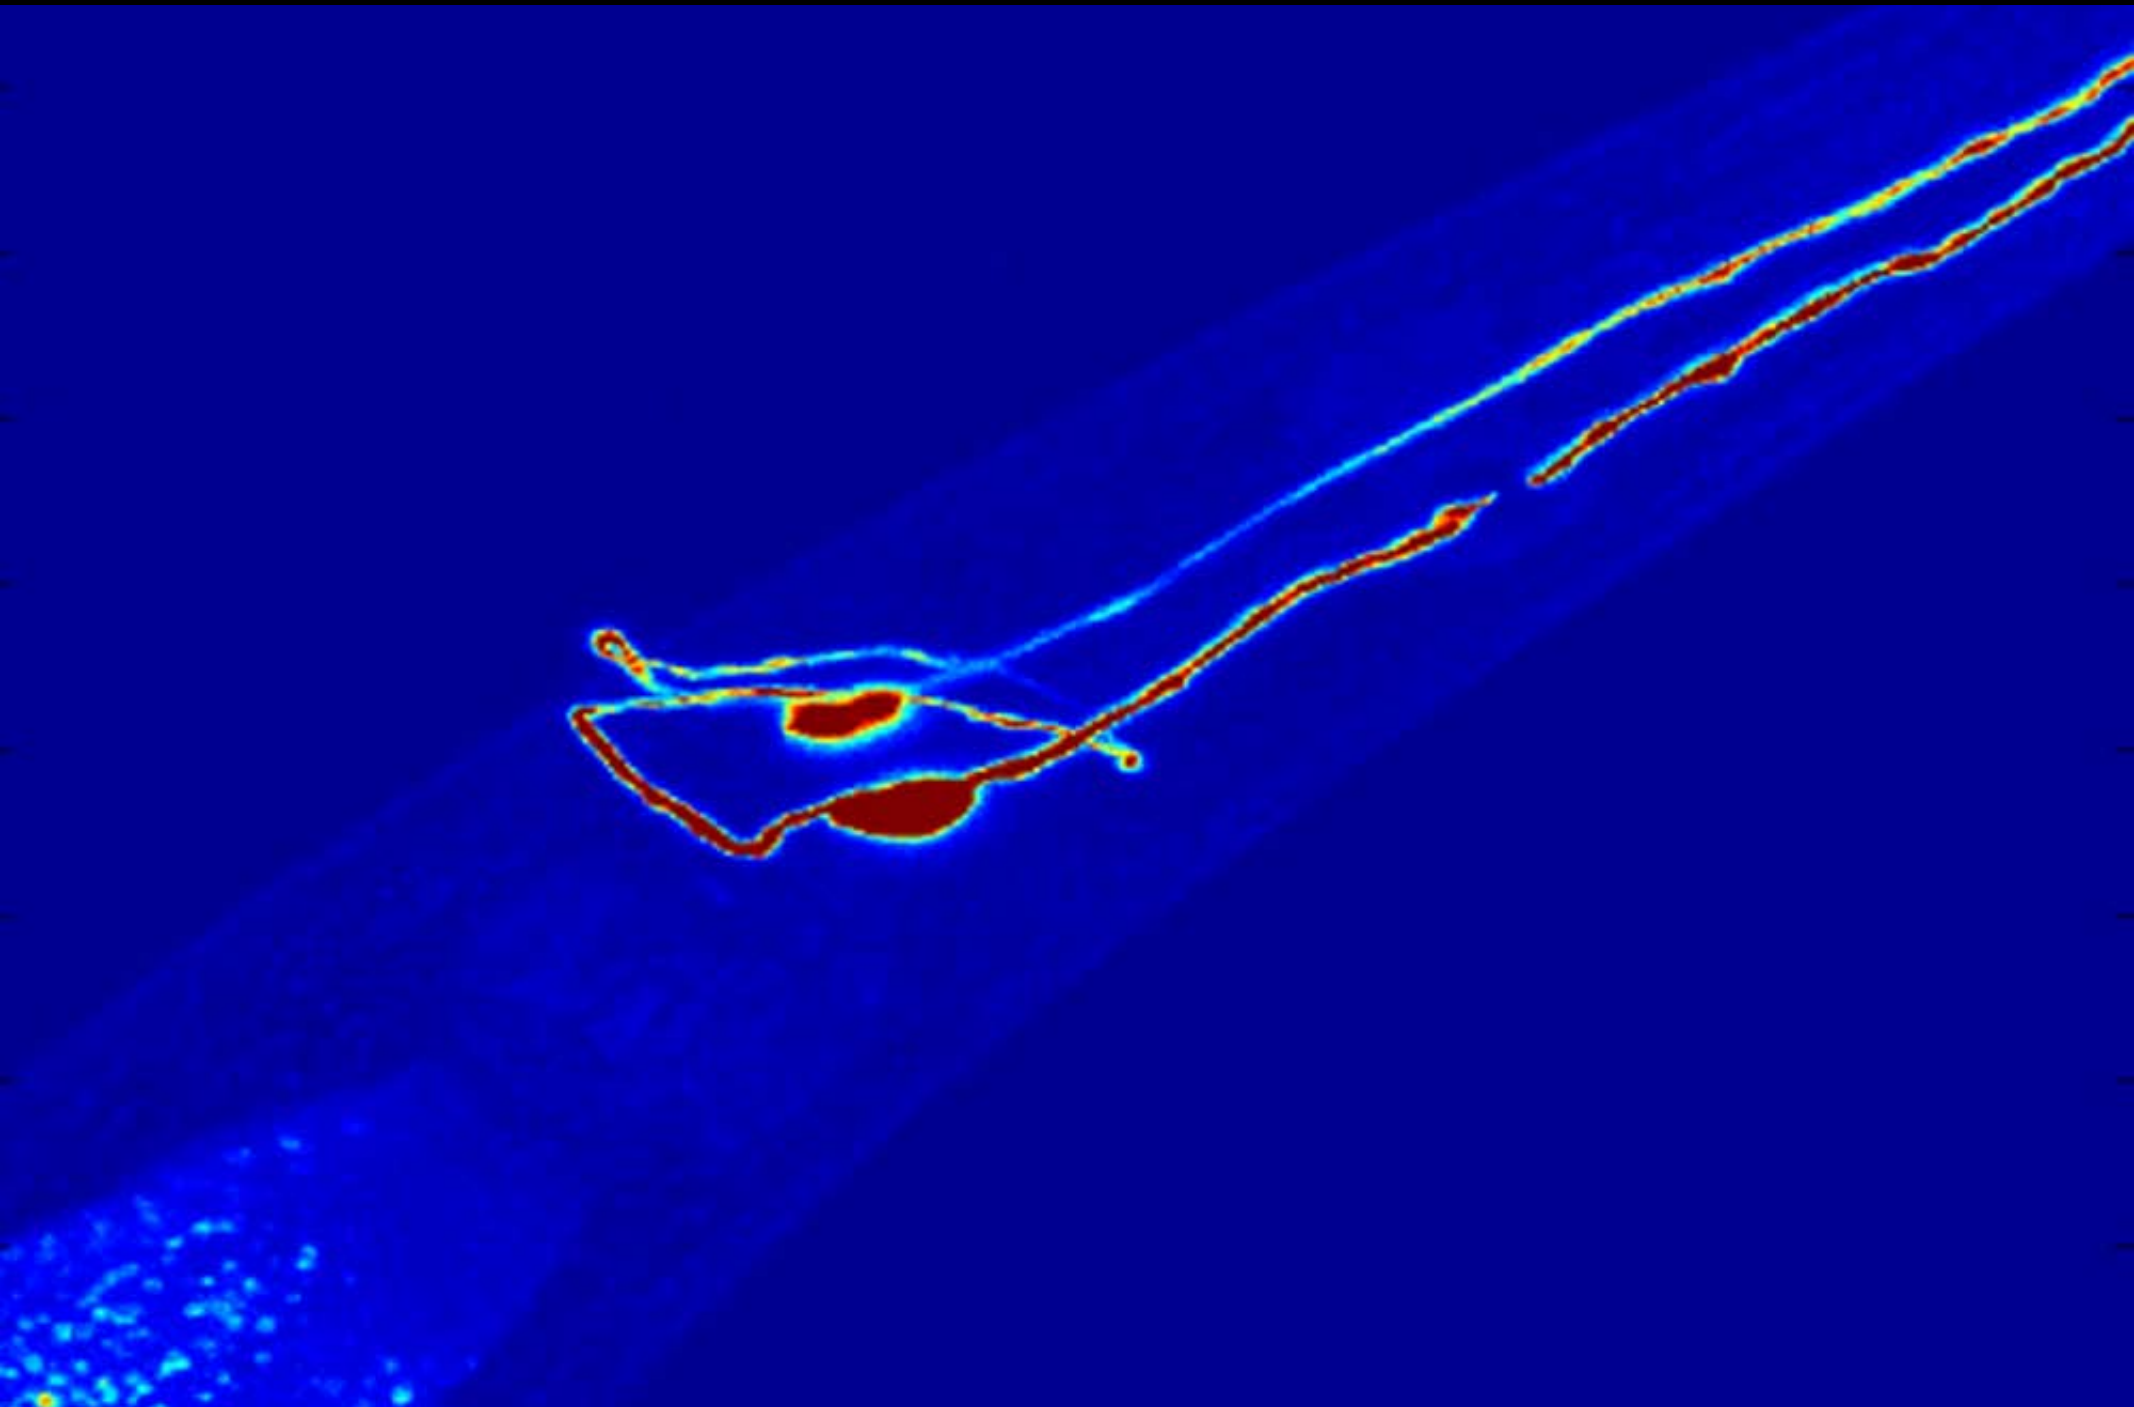




Nanoneurosurgery

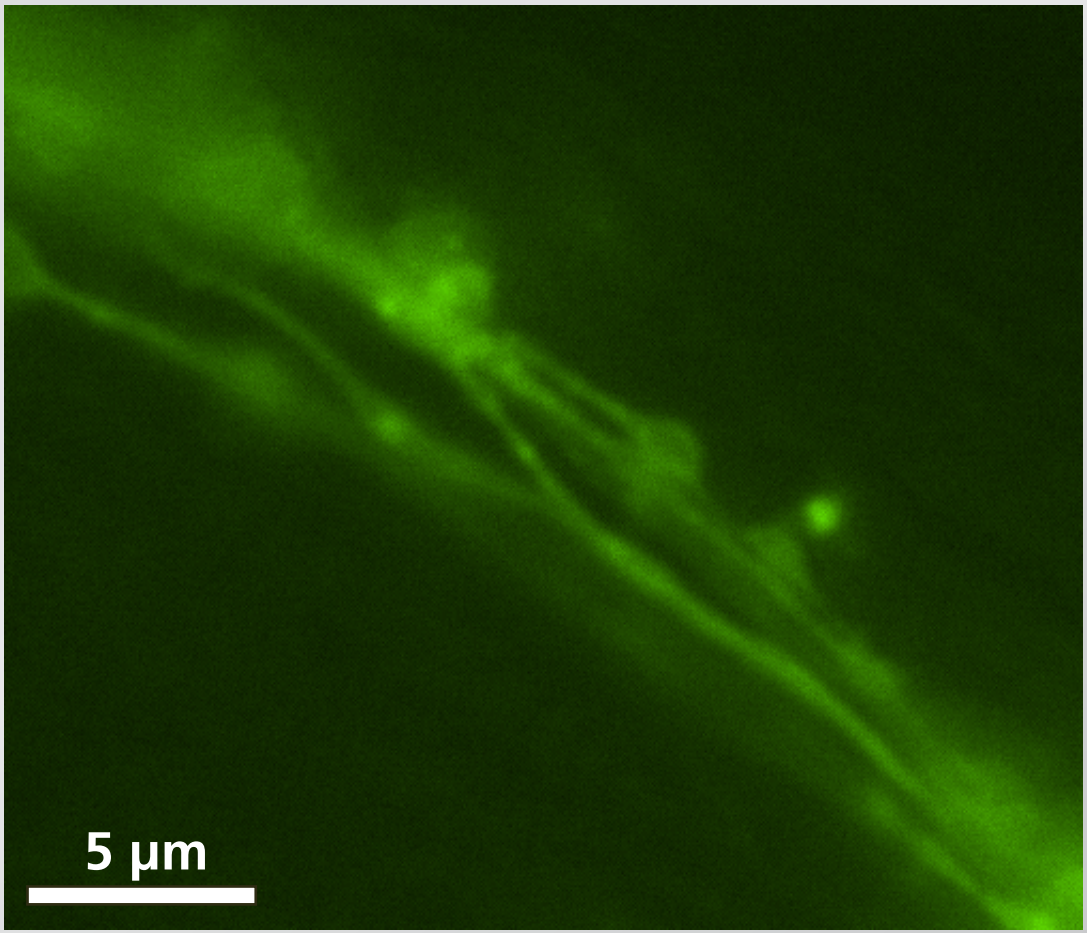
revive worm, reimage 1 day later

Nanoneurosurgery



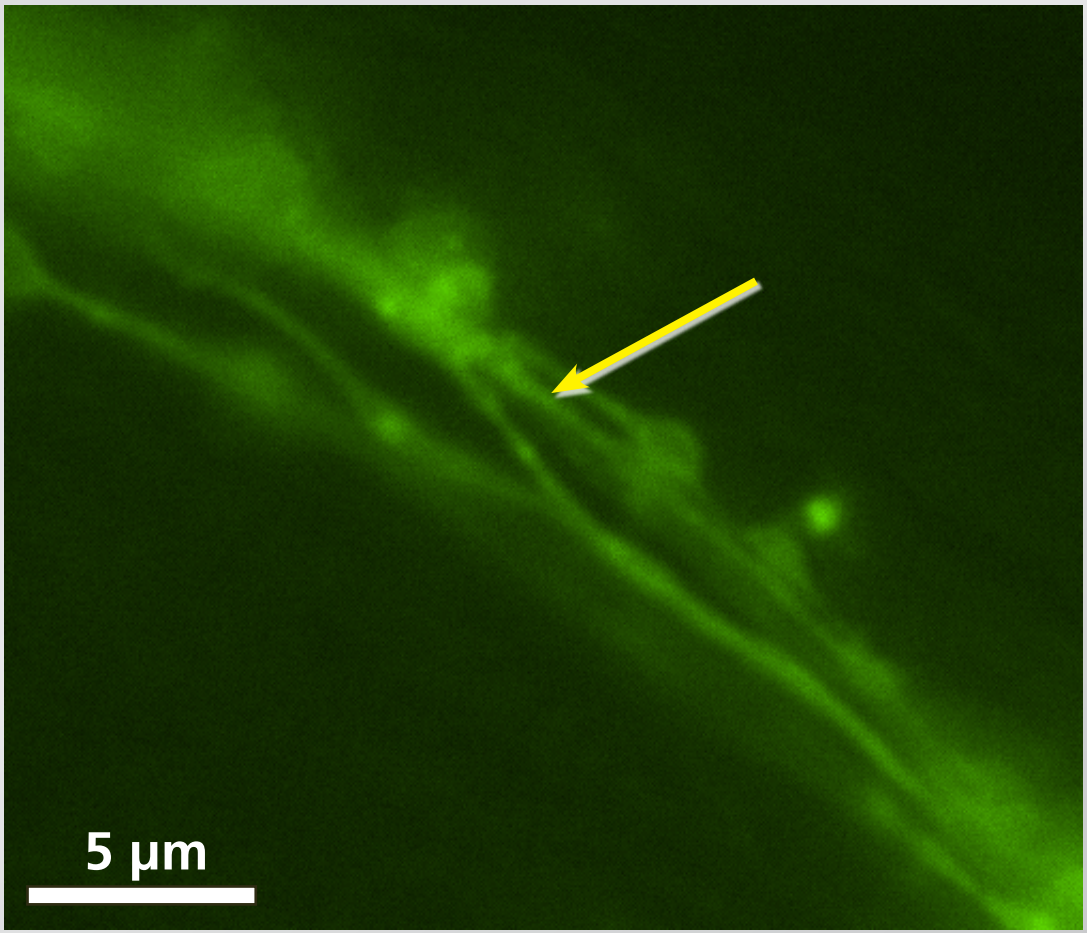
Nanoneurosurgery

cut single dendrite in amphid bundle



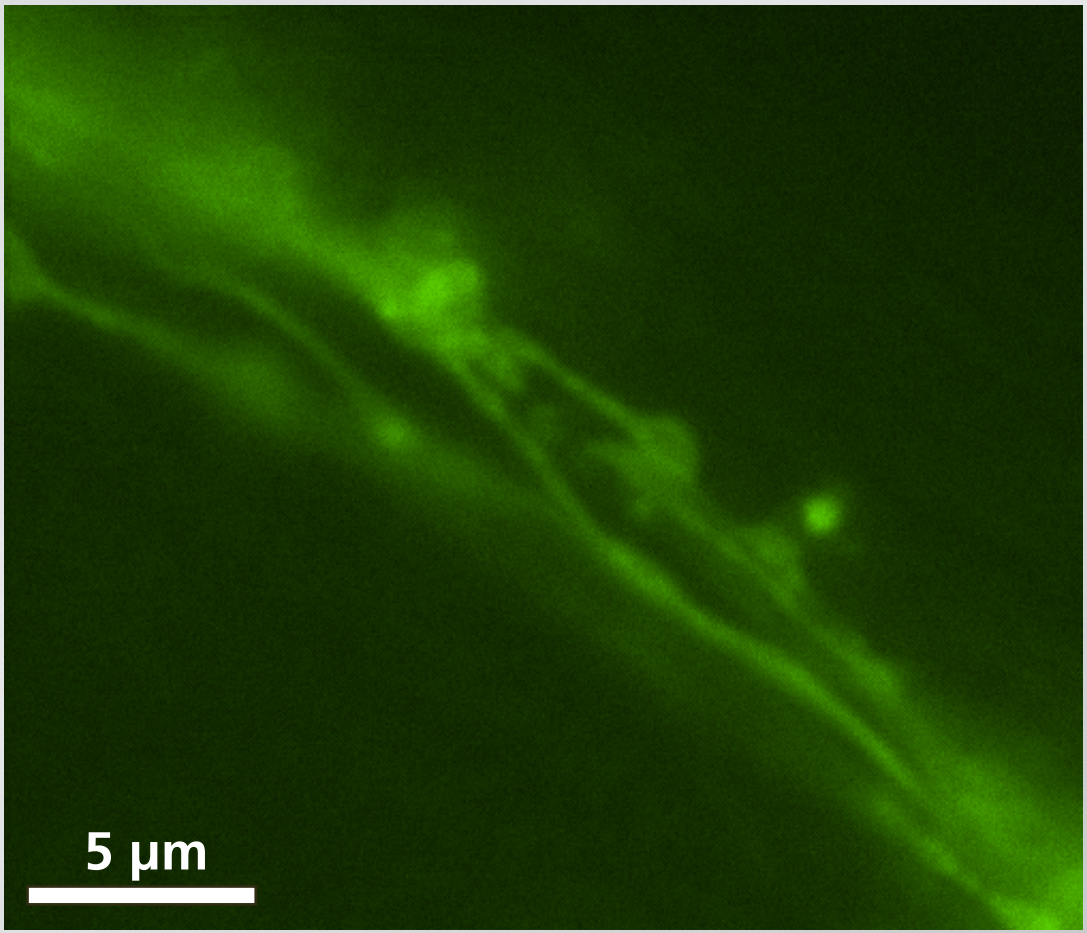
Nanoneurosurgery

cut single dendrite in amphid bundle



Nanoneurosurgery

cut single dendrite in amphid bundle

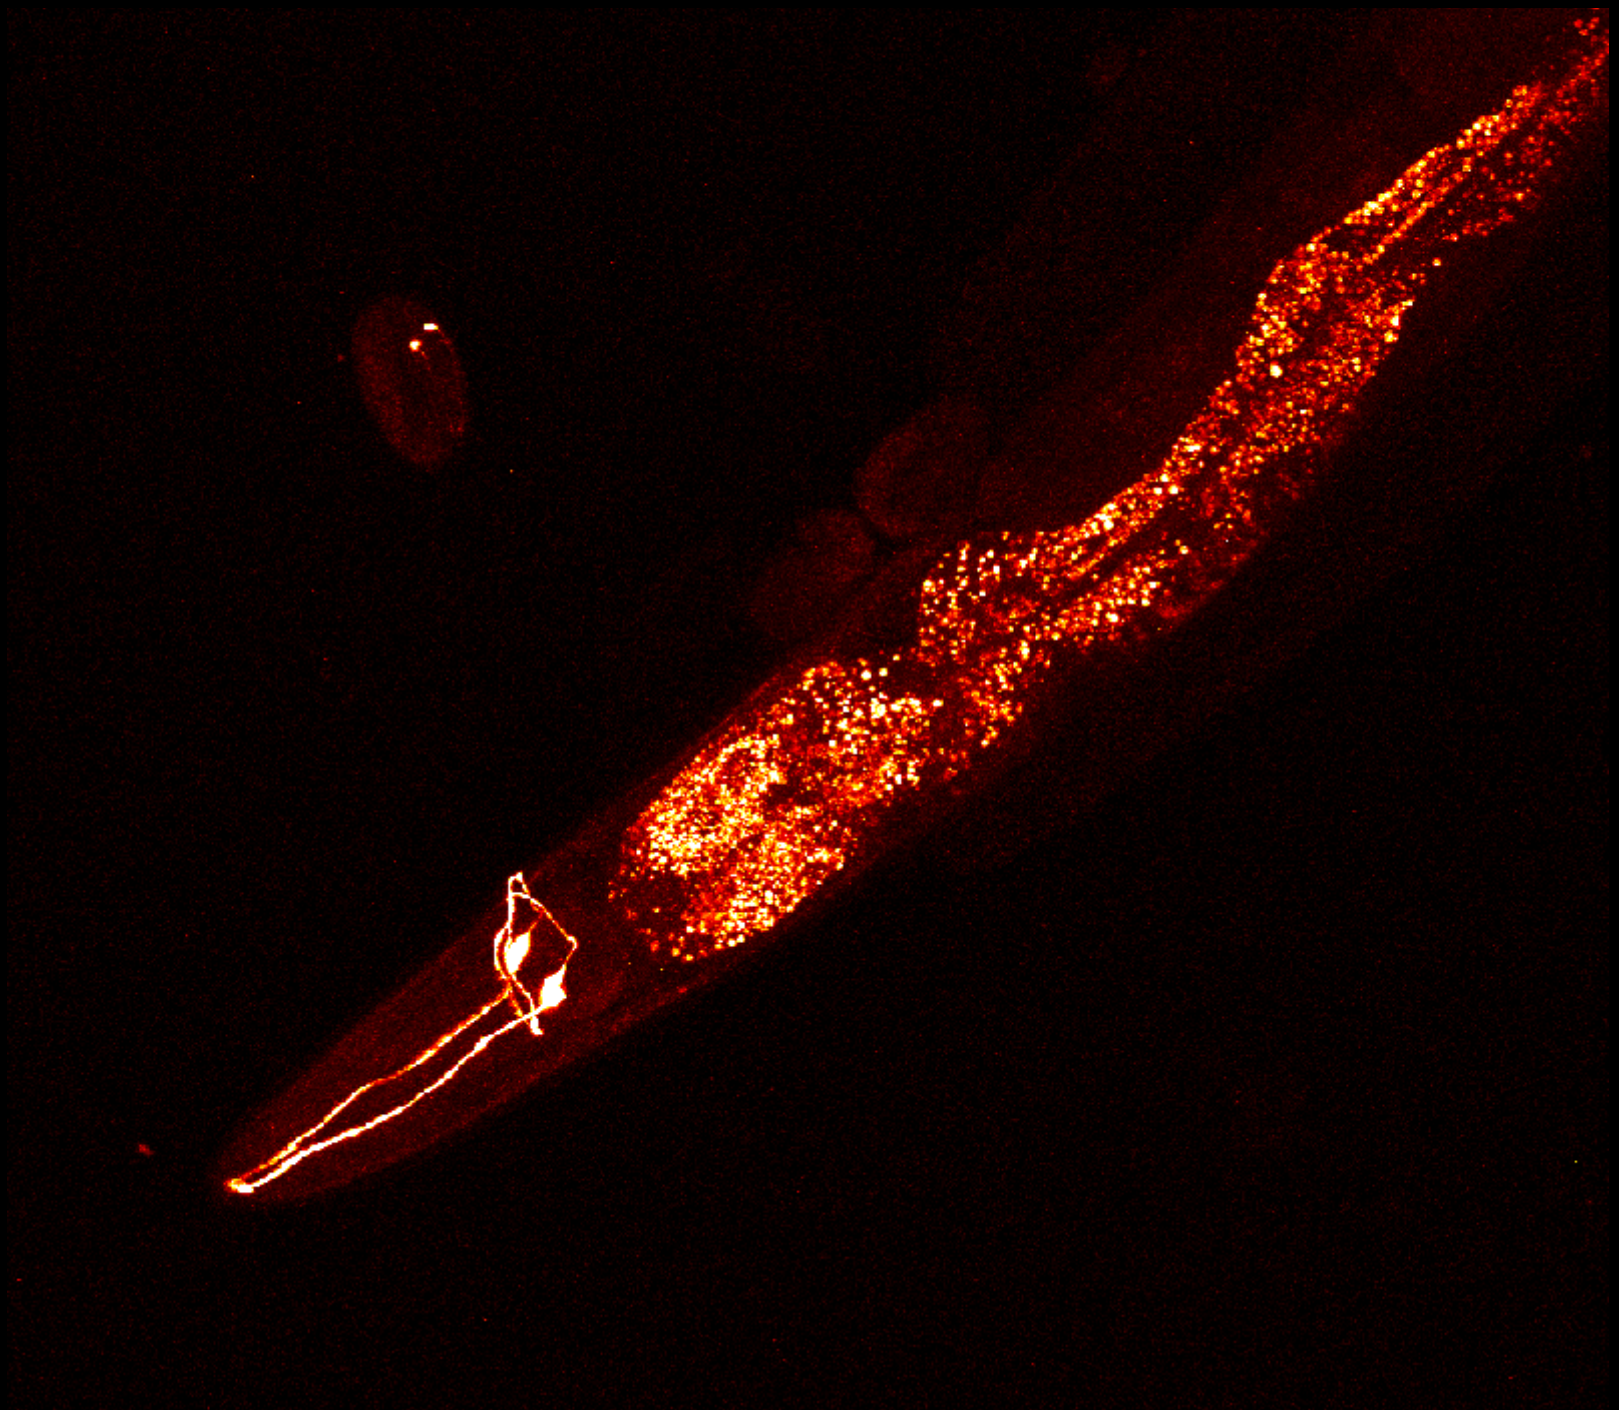


Nanoneurosurgery

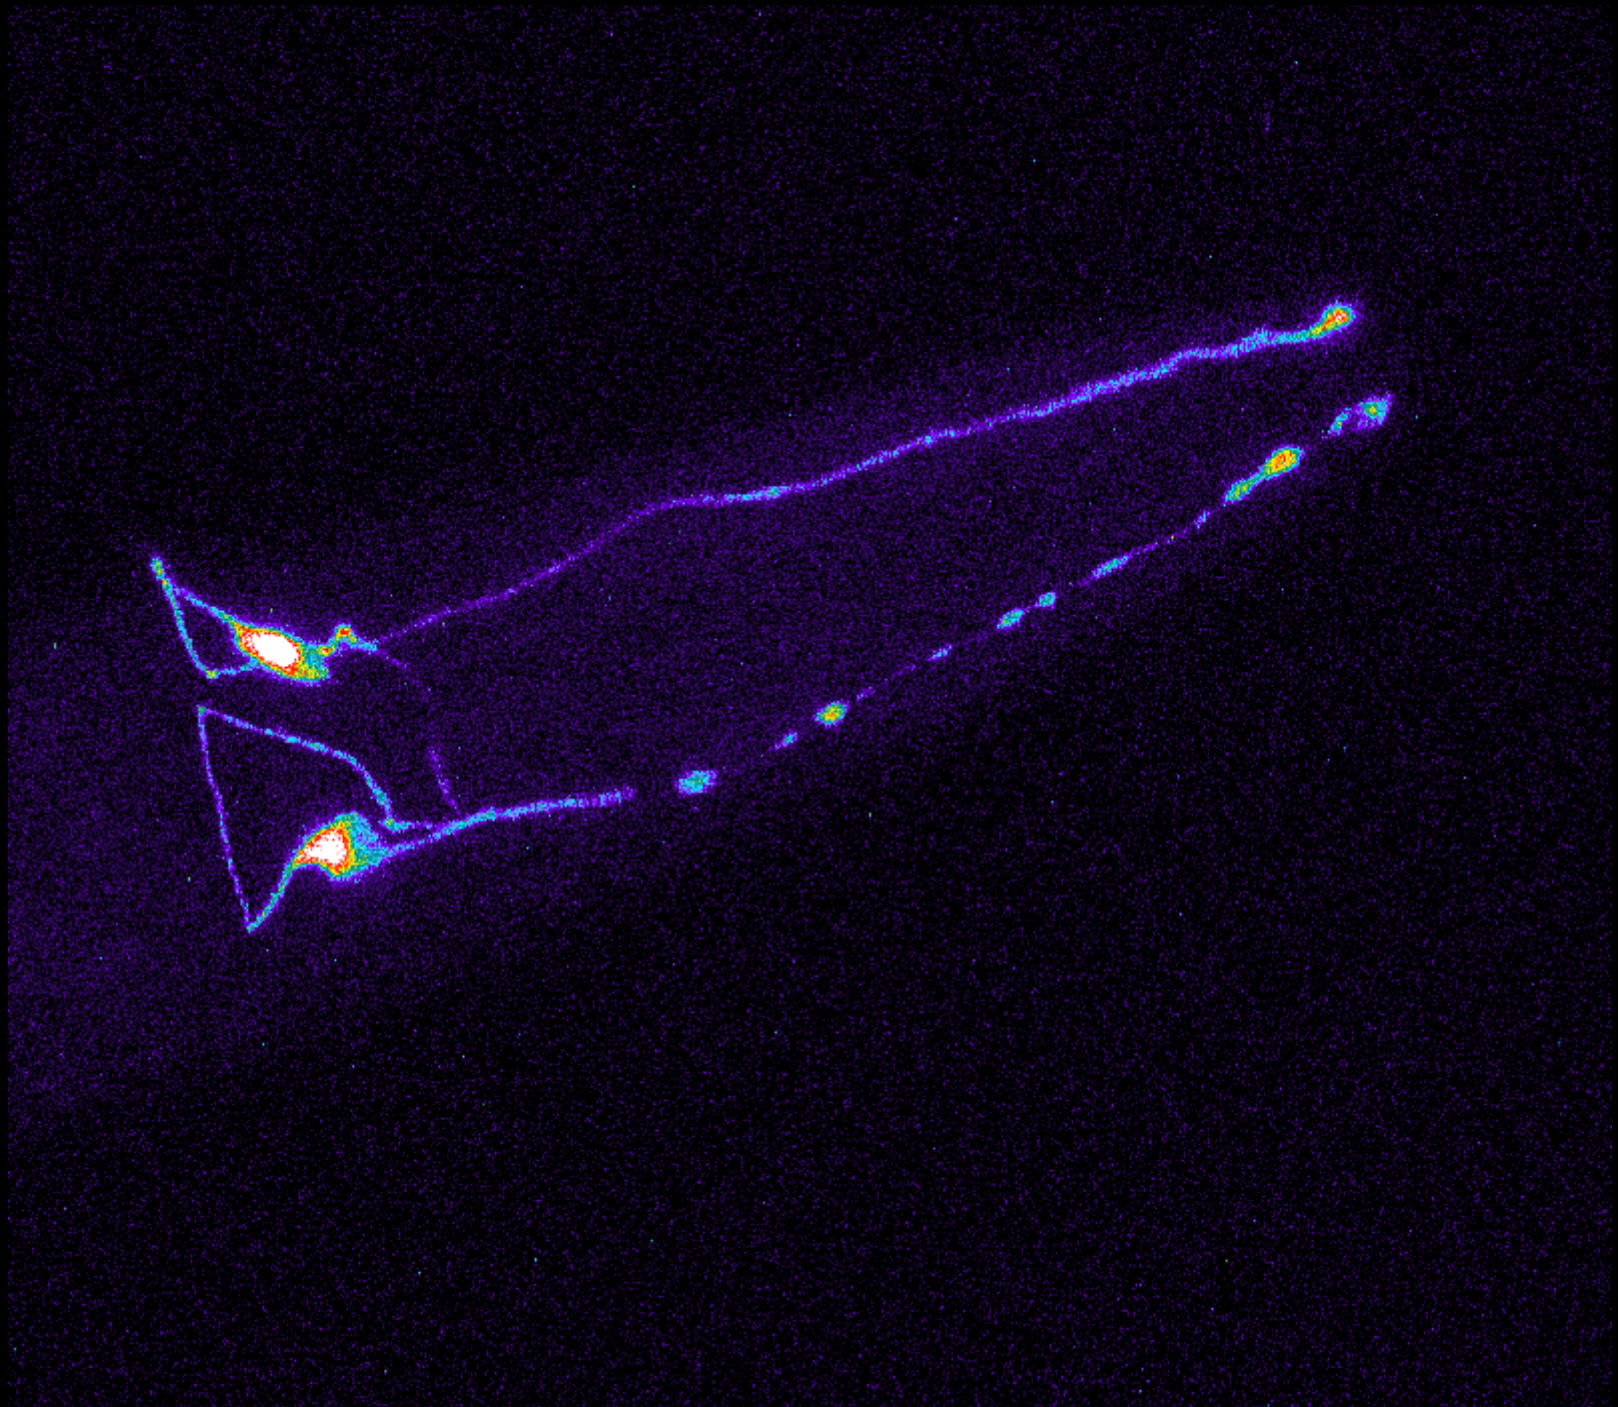
ASD neurons

- responsible for temperature sensing
- ciliary projections
- one on each side

Nanoneurosurgery

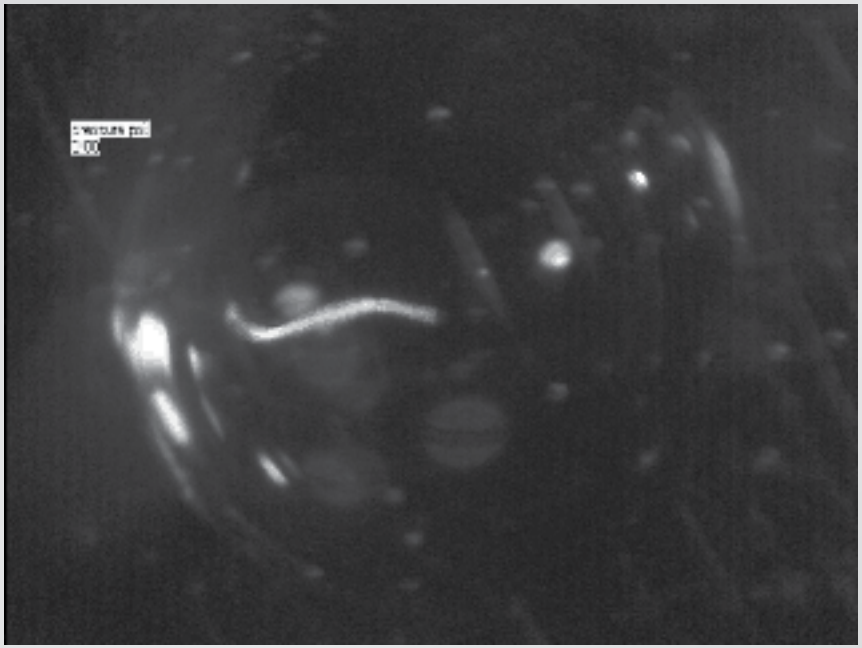


Nanoneurosurgery

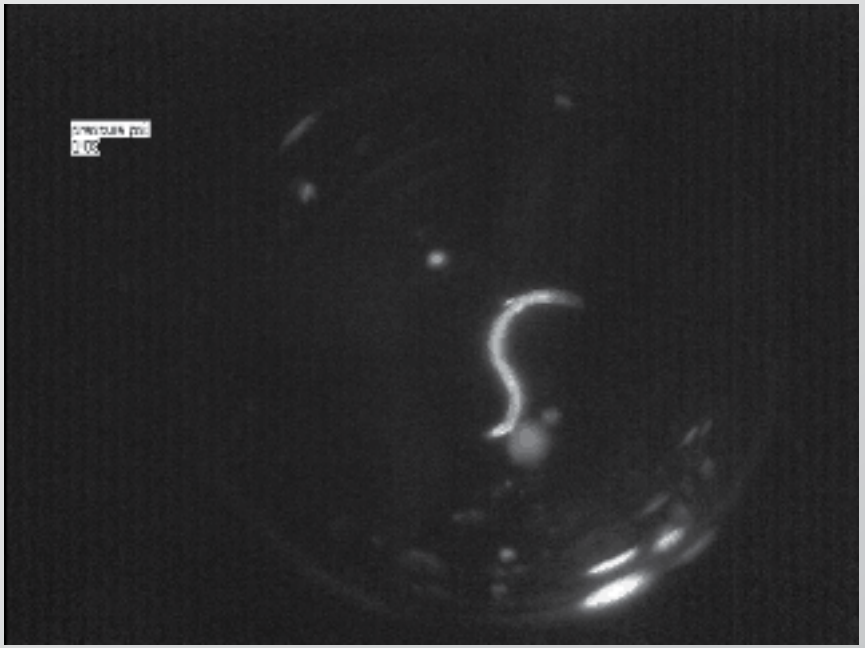


Nanoneurosurgery

surgery results in quantifiable behavior changes



before



after

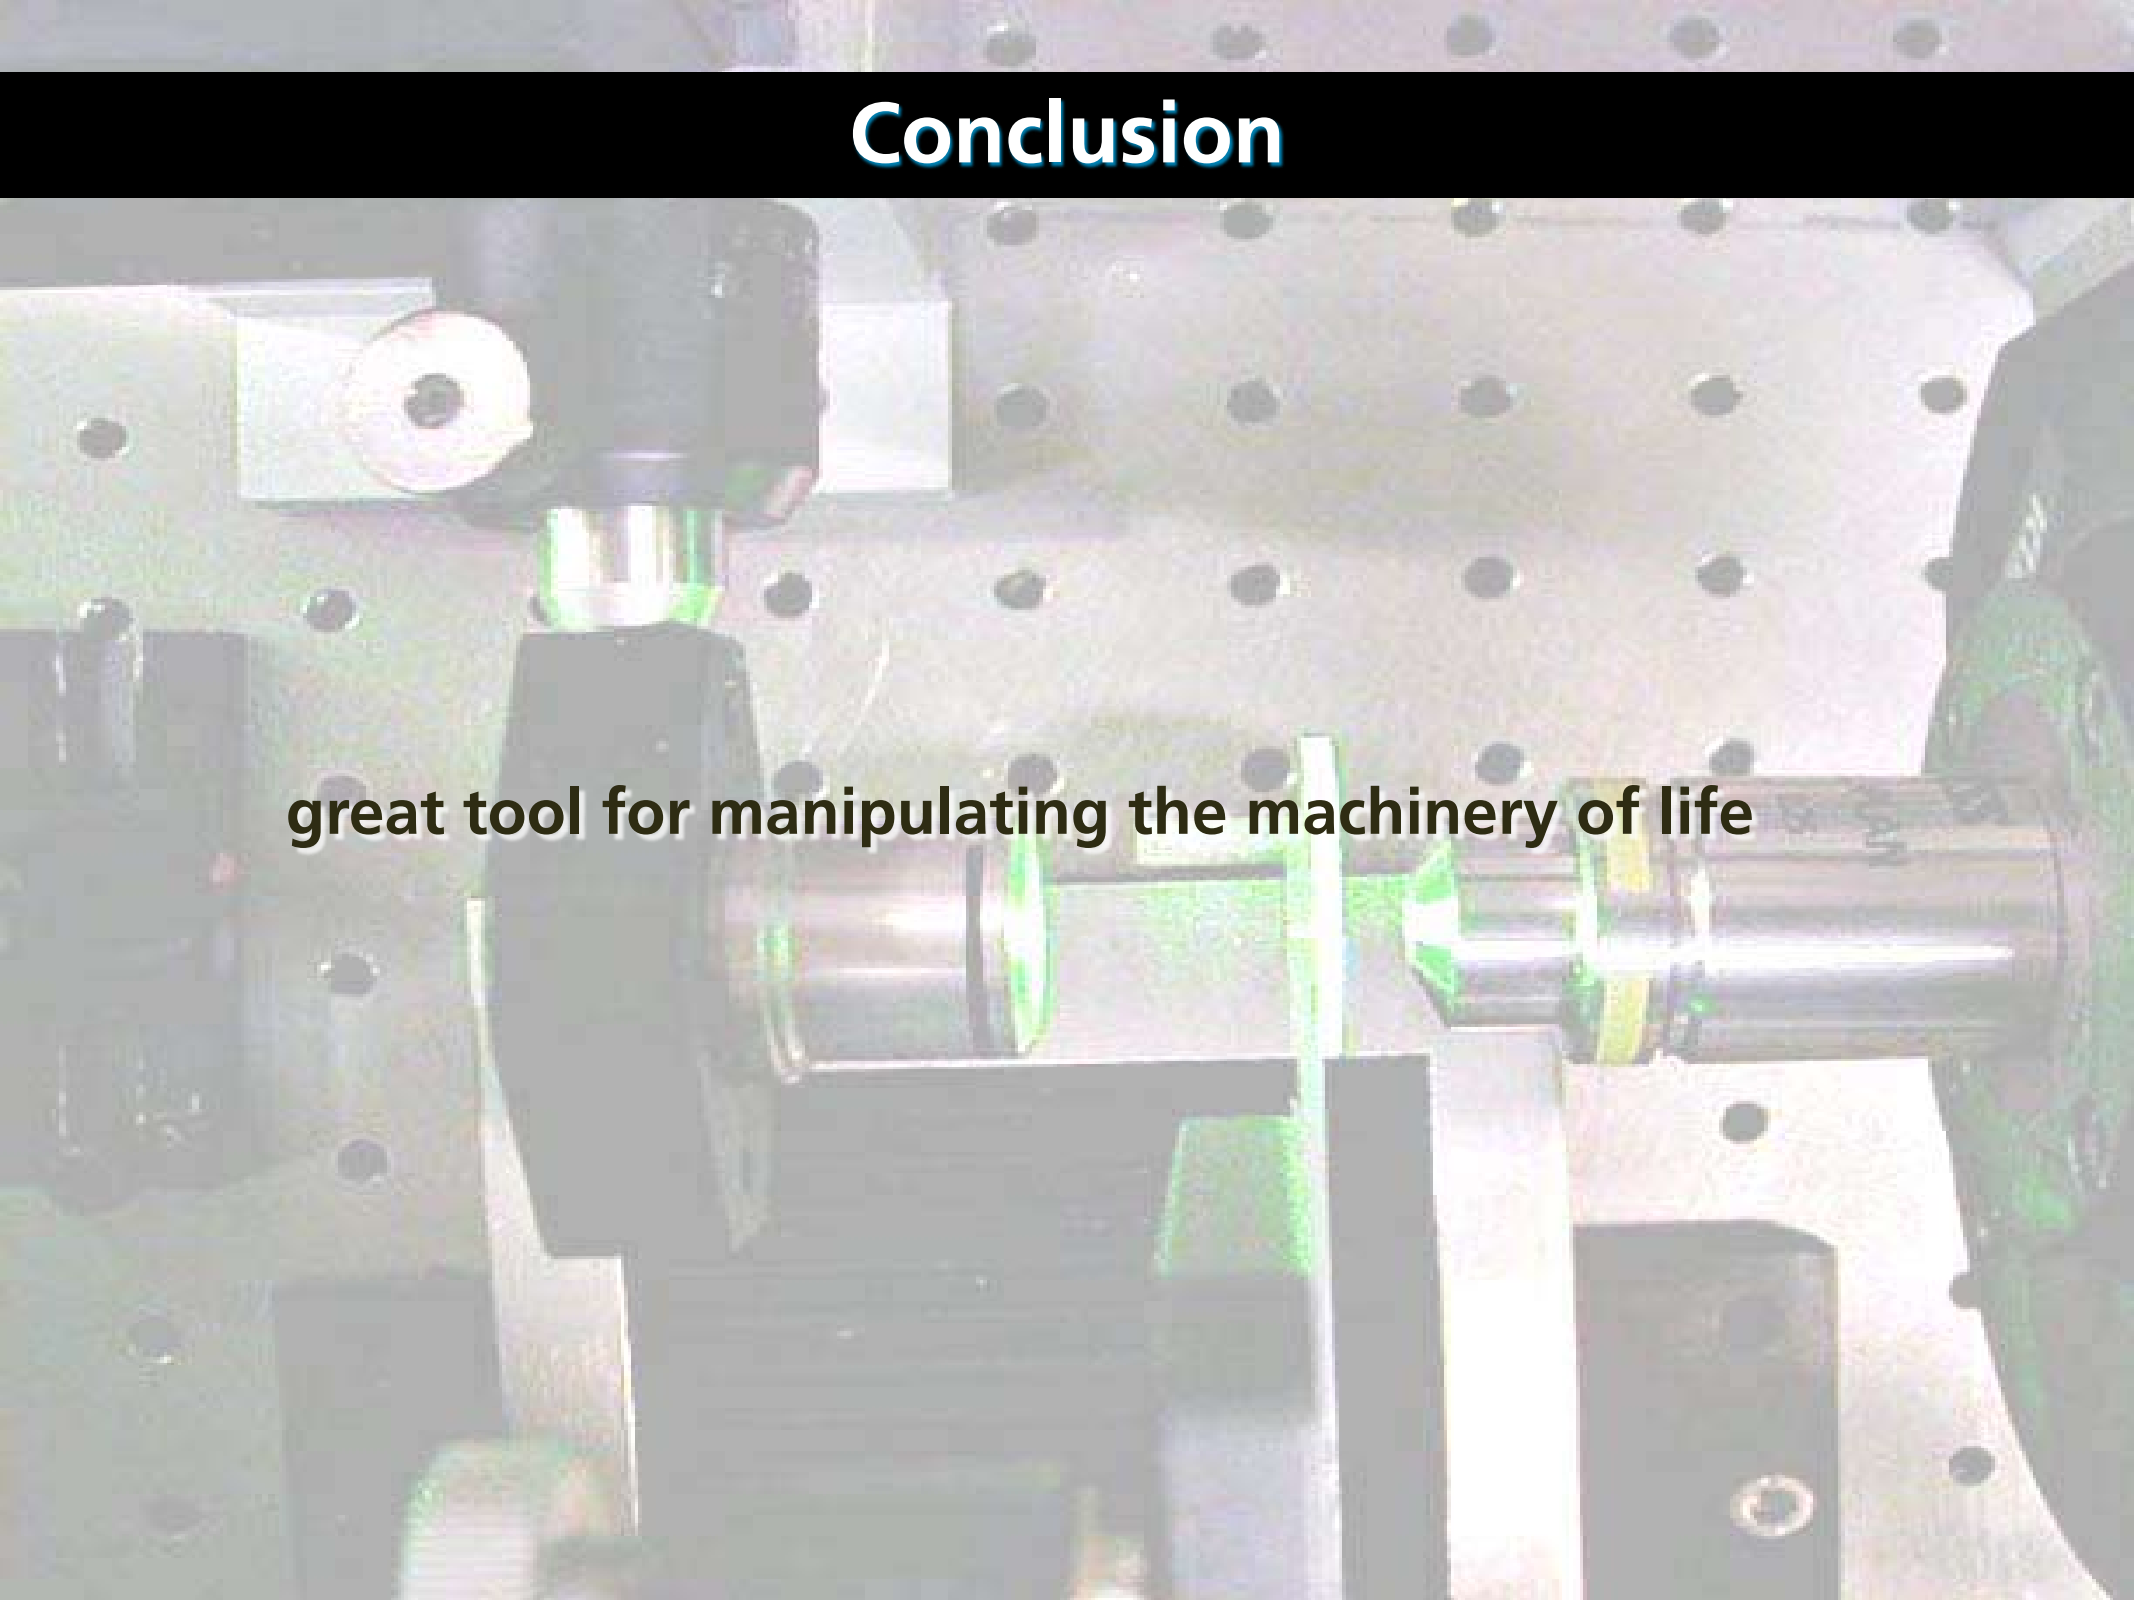
Nanoneurosurgery

temperature sensing occurs at tip of dendrite

Summary

- manipulate on subcellular, submicrometer scale
- penetrate in bulk without compromising viability
- study cell structure and mechanics
- study neurobiological basis of behavior

Conclusion



great tool for manipulating the machinery of life
