they'll pass the test**

A large, dimly lit classroom filled with students sitting at individual desks. The students are mostly seen from the back, looking towards the front of the room. The desks are arranged in rows, and the room has large windows in the background. The overall atmosphere is one of a formal, possibly high-stakes, assessment or lecture.

**assessment focussed on ranking and classifying,
not on developing 21st century skills**

The background of the slide features a close-up, slightly blurred view of a silver and gold ballpoint pen resting on a white notebook. The notebook is covered in handwritten mathematical equations and diagrams in black ink. Some of the visible text includes $x^2 + \frac{1}{6}x + \frac{7}{36} = (\frac{1}{6}x + \frac{7}{36})^2$, $\sqrt{8}$, $\frac{42 \times 3}{(25)}$, and $\frac{15}{25} = \frac{3}{5}$.

**how many different purposes
of assessment can you think of?**

1 purposes

- 1. rate students**
- 2. rate professor and course**
- 3. motivate students to keep up with work**
- 4. provide feedback on learning to students**
- 5. provide feedback to instructor**
- 6. provide instructional accountability**
- 7. improve teaching and learning**

Law Model

Describe the Law of conservation of mass: Sometimes Law, states that mass of a closed system will remain constant, regardless of the process. Also, matter cannot be created nor destroyed.

Mass makes me
happy in humanity

List the three important concepts that the Law of conservation of Energy leads to:

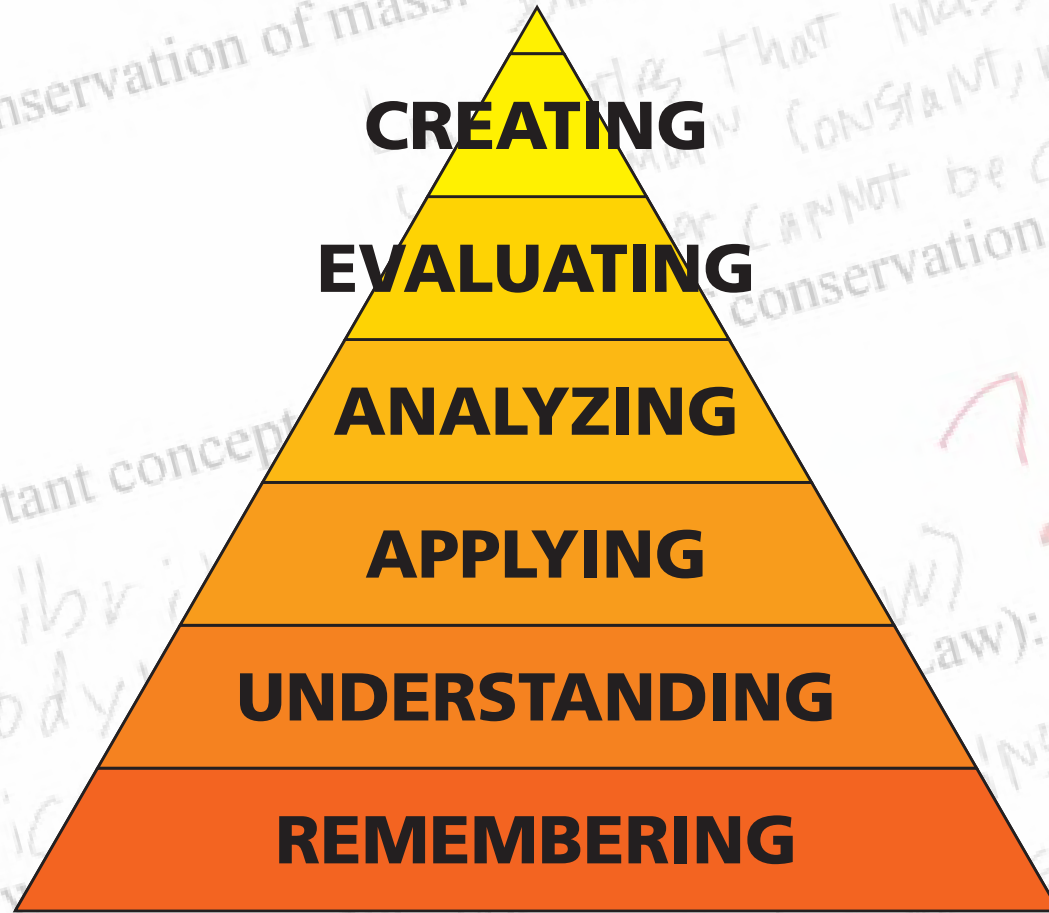

- Equilibrium (boiling)
- Thermodynamics (boiling)
- Kinetics (bow-chicka-wow-wow)

... but ...

Describe the Law of definite composition (Dalton's Law):
... always contains exactly the same parts by mass.

This is the individual round; work on these questions on your own.

Jump to ▼ **1** 2 3 4 5

expression question

What is the derivative of $f(x) = 3x^2 - 6x$?

Submit response

Enter an expression, e.g., x^2 for x^2 , $\ln(y) - \sin(x)$ for $\ln y - \sin x$, $x/(y+1)$ for $\frac{x}{y+1}$, $(1/2)x$ for $\frac{1}{2}x$. Do not enter a complete equation.

Catchy title drawing audience into article

Compelling audience appropriate hook or lead present AND first few paragraphs orient lay reader to subject

All paragraphs are short (1-5 sentences)

Headings structure paper in organized, logical way AND paragraphs linked by transitions

Ends compellingly with an important idea or though provoking question AND ties back to title and opening hook

Rubric for Calibrated Peer Review

Structure

Title

Opening

Paragraph length

Organization

Closing

Wordy, long, unimaginative, or inappropriate title

Missing a "hook" or a lead in the first paragraphs AND does not orient reader to subject

Many paragraphs are long (6 or more sentences)

Lacks organization, no logical headings, no transitions between paragraphs

Does not end compellingly or with an important idea AND does not tie back to opening

Contains incorrect, misstated, irrelevant, or unnecessary facts

Does not back up facts with proper, convincing, or interesting sources or evidence

Mostly predictable based on available

Basic title

Hook or lead present OR first few paragraphs orient reader to subject

Some paragraphs are long (6 or more sentences), most are short (1-5 sentences)

A few headings OR most paragraphs linked by transitions

Summary-like closing, but does not tie back to title or opening hook

All facts are 100% correct, relevant, and necessary

Most, but not all, facts backed up with proper, convincing, or interesting sources or evidence

Some originality apparent

Material appropriate and aimed at target audience AND mostly avoids scientific content that contains no colloquialisms or acronyms

Includes fact-checked expert and/or lay testimony (newspaper article only)

Original presentation of material; uses the unexpected to capture attention

Material appropriate and aimed at target audience AND relates to practical/everyday concerns AND uses analogies or other techniques to relate unfamiliar content to familiar concepts; no jargon, colloquialisms, or acronyms

nt new addition to night sky
quires fear and awe – Mona Lisa

By now everyone has noticed the
mistakable new addition to our sky, which
outshines the brightest star at night and
continues to shine alongside the sun during
the day. None of us have seen such a sight in
the course of our lives and for many it has
served as a jarring reminder of the violent
and powerful cosmic events that occur in
what often appears to be a calm and constant

The New York Times

January 20, 2009

OBSERVATORY

Spectacular Supernova Observed

By John Glenn

New York, N.Y. – People around the world witnessed the
in recorded history this morning. The supernova, named
Eastern Time, appearing as bright as the full moon. At
continued to shine for several hours.

Traffic was interrupted in New York City, as early-ris
of the amazing sight. As of press time, the

Galileo
20 January 2008

Yesterday at about 4 p.m., I observed a peculiar
appeared in the sky. A glowing flash emitted
seconds, accompanied its appearance. The object
it even in broad daylight. How did this unprecedented
its consequences for Earth? In order to understand
on Earth will most likely ever see again, we have
galaxies. To fully appreciate it and not be alarmed
understand the life cycle of stars and how they
classified as consisting of eight planets (Pluto, etc.)
