We have a problem

**380,000 students take
introductory physics
each year...**

We have a problem

**about 1% of these get
a bachelor's degree
in physics**

We have a problem

**Of the 4,300 students with
a bachelor's degree
in physics...**

AIP Report R-151.33 (1997)

We have a problem

**about 35% go on to get a
Ph.D. in physics...**

AIP Report R-151.33 (1997)

We have a problem

**That's one out of every
260 students in our
introductory
courses!**

We have a problem

**What about the
other 259...?**

We have a problem

**What do we know
about these
students?**

We have a problem

Some disturbing symptoms:

- ▶ **frustration**
- ▶ **lack of understanding**
- ▶ **lack of basic knowledge**

We have a problem

They know the jargon:

- ▶ **circular motion**
- ▶ **barometric pressure**
- ▶ **light radius**
- ▶ **something to the power times ten to the something**

We have a problem

They are aware of their lack of knowledge

- ▶ **I graduated from college but I didn't study *astronomy***
- ▶ **It's been a while since I've had physics**

We have a problem

They are aware of their lack of knowledge

- ▶ **I graduated from college but I didn't study *astronomy***
- ▶ **It's been a while since I've had physics**

...and they don't care!

We have a problem

Should we worry?

We have a problem

We'd better!

We have a problem

"I took four years of science and four years of math...

**A waste of my time,
a waste of the teacher's time,
and a waste of space...**

**You know,
I took *physics*.**

For *what?*"

Why do we have this problem?

Why do we have this problem?

Lectures focus on transfer of information...

Why do we have this problem?

Conventional problems reinforce bad study habits

Why do we have this problem?

Conventional problems reinforce bad study habits

Why do we have this problem?

Conventional problems reinforce bad study habits

Calculate:

- (a) the current in the $2\text{-}\Omega$ resistor, and
- (b) the potential difference between points P and Q

Why do we have this problem?

Are basic principles understood?

Why do we have this problem?

Are basic principles understood?

When S is closed, what happens to the:

- (a) intensities of A and B ?
- (b) intensity of C ?
- (c) current through battery?
- (d) voltage drop across A , B , and C ?
- (e) total power dissipated?

Why do we have this problem?

conventional

conceptual

Why do we have this problem?

Why do we have this problem?

Why do we have this problem?

A large lecture hall filled with students seated at desks, facing a stage. A lecturer is standing at a podium on the stage, and a large screen displays text. The text on the screen is partially legible and appears to be a list or a set of instructions. The text on the screen includes:

1. ...
2. ...
3. ...
4. ...
5. ...
6. ...
7. ...
8. ...
9. ...
10. ...

So what should we do?

Peer Instruction

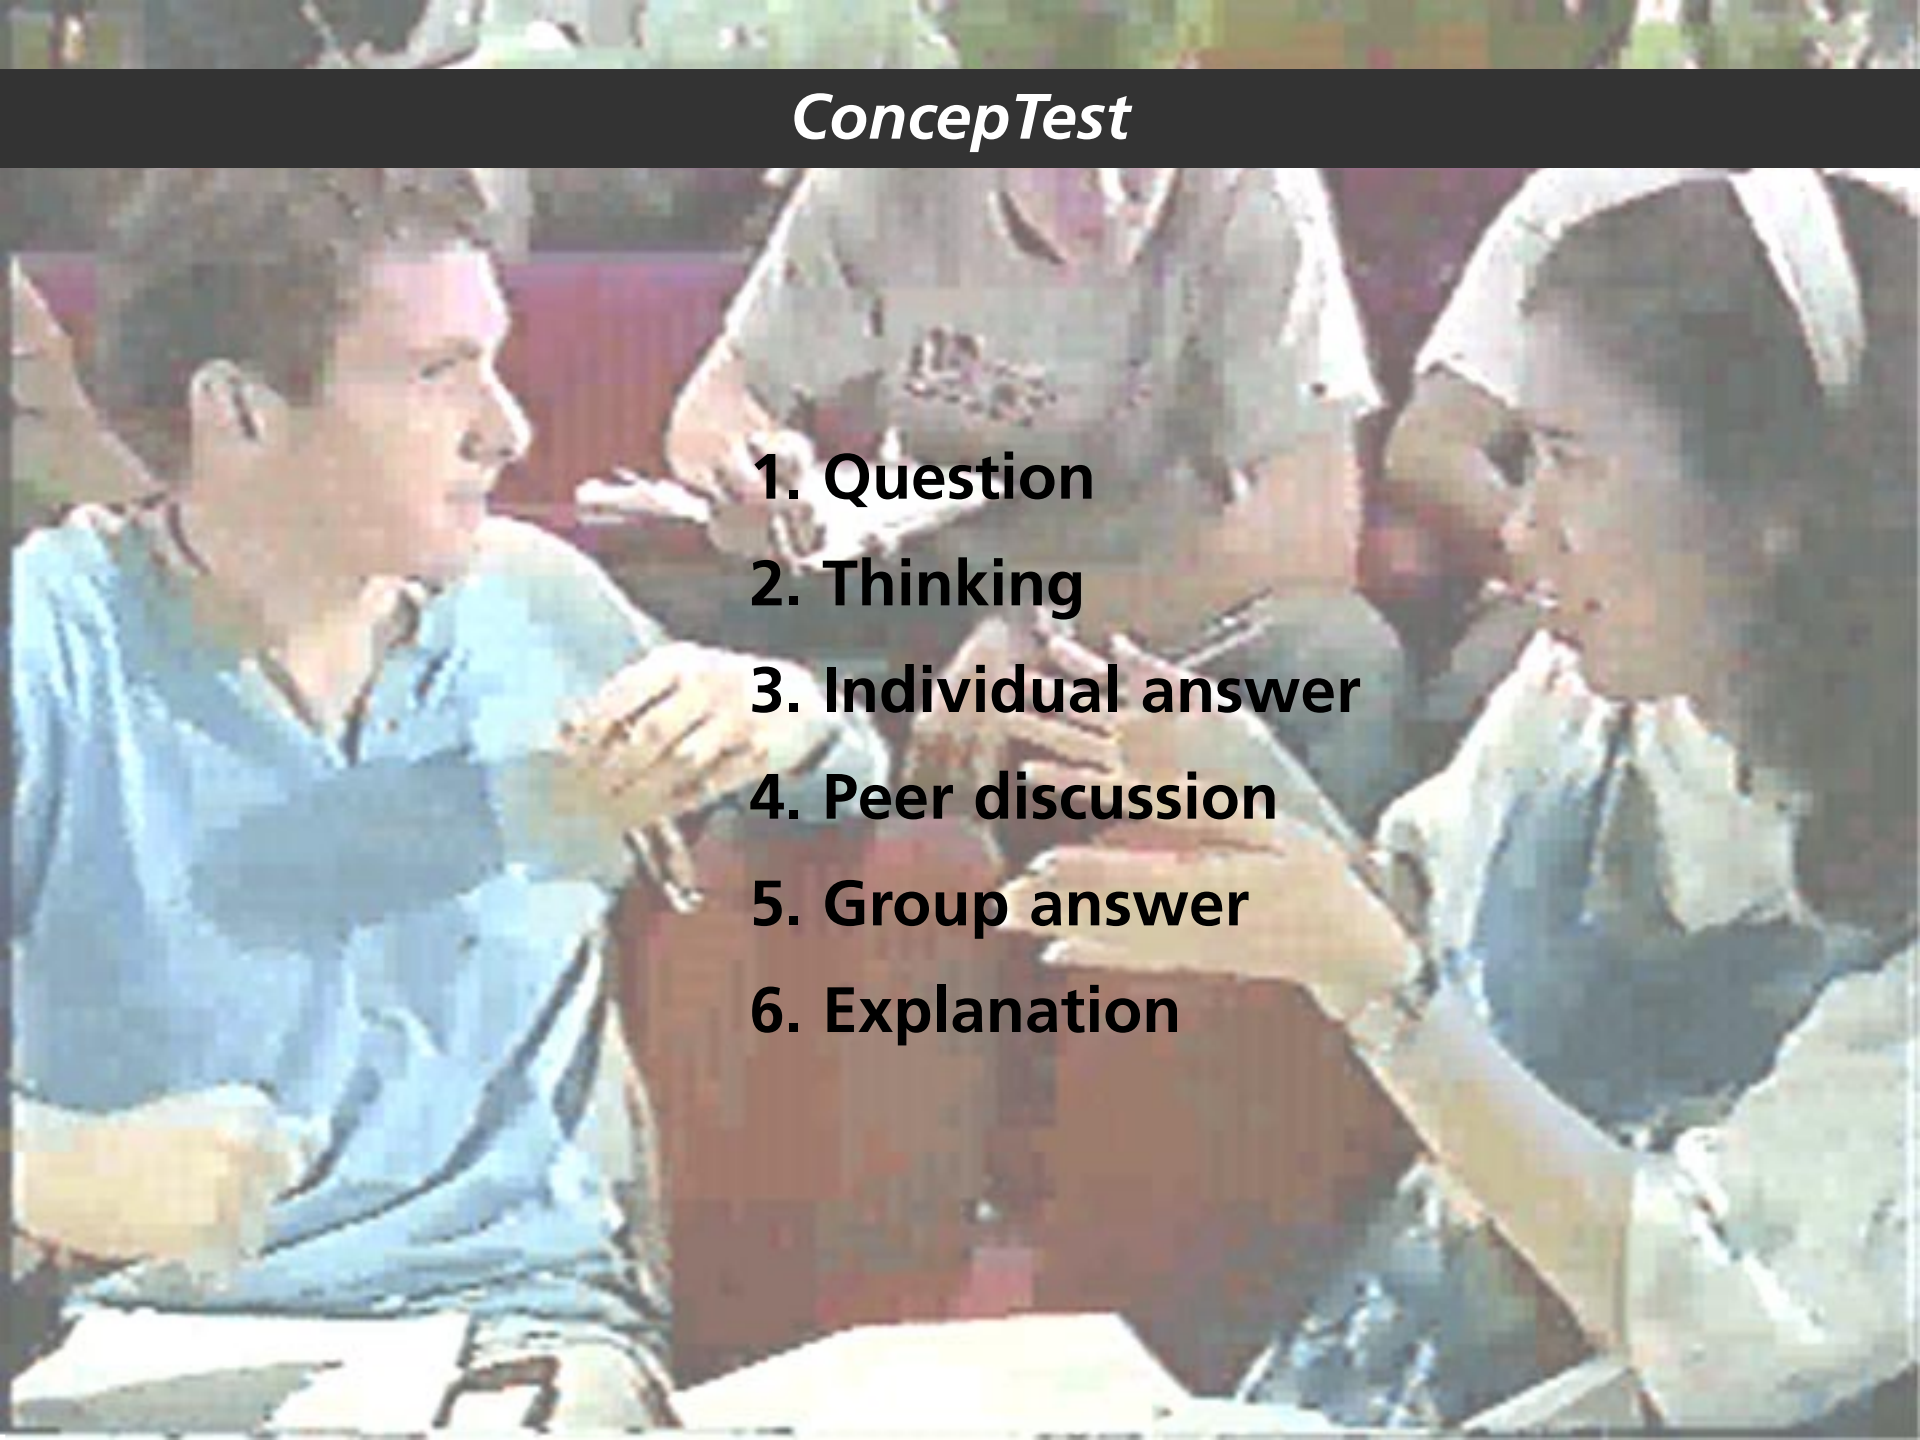

Help students take more responsibility for learning!

Peer Instruction

Main features:

- ▶ **Pre-class reading**
- ▶ **In class: depth, not coverage**
- ▶ **ConcepTests**

ConcepTest

1. Question
 2. Thinking
 3. Individual answer
 4. Peer discussion
 5. Group answer
 6. Explanation
- 
- A photograph of three students in a classroom setting. A male student in a blue shirt is on the left, gesturing with his hands while speaking. A female student in a white headscarf is on the right, listening intently. A third student is partially visible in the background. They appear to be engaged in a group discussion or peer review activity.

Results

What about problem solving...?

Results

Results

Results

Results

**So better understanding leads to better
problem solving!**

Results

So better understanding leads to better problem solving!

(but “good” problem solving doesn’t always indicate understanding!)

Conclusion

**Let's not forget the base
of the pyramid!**

Conclusion

**Let's give them something
of value!**

Conclusion

Challenges:

- ▶ **internal skepticism**
- ▶ **growing pains**
- ▶ **limited circle of influence**

Conclusion

Rewards:

- ▶ **engagement**
- ▶ **improved understanding**
- ▶ **class is fun!**

Question 1

Consider a rectangular metal plate with a circular hole in it.

Question 1

Consider a rectangular metal plate with a circular hole in it.

When the plate is uniformly heated, the diameter of the hole

1. increases
2. stays the same
3. decreases

Message 1

It's easy to fire up the audience!

Question 2

A boat carrying a large boulder is floating on a lake. The boulder is thrown overboard and sinks to the bottom of the lake.

Question 2

A boat carrying a large boulder is floating on a lake. The boulder is thrown overboard and sinks to the bottom of the lake.

Does the level of the water in the lake (with respect to the shore)

- 1. go up,**
- 2. go down, or**
- 3. stay the same?**

Message 2

We all make mistakes!

Question 3

Consider an object that floats in water but sinks in oil. When the object floats in water, half of it is submerged.

Question 3

Consider an object that floats in water but sinks in oil. When the object floats in water, half of it is submerged.

If we slowly pour oil on top of the water so it completely covers the object, the object

1. moves up.
2. stays in the same place.
3. moves down.

Message 3

It's easy to make simple demonstrations fascinating!

Question 4

When we hold a page of printed text in front of a mirror, the text on the image in the mirror runs from right to left:

The New York Times

Question 4

When we hold a page of printed text in front of a mirror, the text on the image in the mirror runs from right to left:

ɹɐmɪT ʎɪoY wəɪl ɐɪT

Why is it that right and left are interchanged and not top and bottom? Because

1. the mirror is oriented vertically,
2. we have two eyes in the horizontal plane,
3. the Earth's gravitation is directed downward,
4. a habit we have when looking at images in a mirror,
5. It only *appears* to run from left to right.

Message 4

It's "simple" only if you know the answer

Feedback

Flashcards: simple and effective!

Feedback

Flashcards: simple and effective!

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

How long do you have to wait before someone frees up a space?

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

How long do you have to wait before someone frees up a space?

Requires assumptions

Requires developing a model

Requires applying that model

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces. **On average people shop for about 2 hours.**

How long do you have to wait before someone frees up a space?

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces. On average people shop for about 2 hours.

Assuming people leave at regularly-spaced intervals, how long do you have to wait before someone frees up a space?

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces. On average people shop for about 2 hours.

Assuming people leave at regularly-spaced intervals, how long do you have to wait before someone frees up a space?

Requires applying a (new) model

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area where people are known to shop, on average, for two hours. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

How long do you have to wait before someone frees up a space?

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area where people are known to shop, on average, for two hours. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

How long do you have to wait before someone frees up a space?

$$t_{wait} = \frac{T_{shop}}{N_{spaces}}$$

Problem with problems

On a Saturday afternoon, you pull into a parking lot with unmetered spaces near a shopping area where people are known to shop, on average, for two hours. You circle around, but there are no empty spots. You decide to wait at one end of the lot, where you can see (and command) about 20 spaces.

How long do you have to wait before someone frees up a space?

Requires using a calculator

$$t_{wait} = \frac{T_{shop}}{N_{spaces}}$$

Essential elements

- ▶ **Reading (before class)**
- ▶ **Participation (during class)**
- ▶ **Problem-solving (after class)**
- ▶ **Appropriate testing/assessment**
